Barry, with a "genius" like YOU to DEFEND amateur radio, like
you have the last week or so on here, I am SURE that we will
have no problem maintaining the amateur radio service over the
next few years, and perhaps extract a great price for it by selling it
to the likes of UPS and SWATCH.

You really should keep your day job, OM!

He he he he he!

Ijust found this announcement on the web:

NEW SPACE OPERATION ANNOUNCED

17 April 1999, 0000:02:21 UTC

Commercial use of space and Amateur Frequencies by Beer Company

Watch the news for announcements by Heineckin Beer Co.,
which is planning to launch a Drake L-7 driven by an Index Labs
transceiver set up as a continuous beacon on the moon, with a 3
element wire yagi aimed at earth transmitting a continuous message
with the word "DRINK!" in every message.

These messages are being recorded on the Internet right now,
and you can add YOURS to the memory chips that will be sent up
next month by the Russian Space Agency!

Of course the transmissions will be in the fashionable, MODERN mode of
SSB on a frequency somewhere between 3890 and 3900 Kilo Hertzes.

There will be no batteries to go bad or get "left behind" or be
"inadequate" this time, like in the previous attempt by Swatch!
THIS launch will not even need a satellite! No, it will be a
GROUND-BASED system, and the only requirement is that someone
go to the moon every 30 days and add fuel to the supply tank for the
1 KW generator!

Tim, KA8DZZ has volunteered to be trained as an astronaut so he can do
this duty for Heineckin, but NASA has not responded yet as to whether
they will accept and train him.

Broadcasts will begin in May and continue through the expected life of
the system which is expected to run though November and end at 2359Z
on the last night of Sweepstakes.

There have been no comments in response as yet, from organizations
such as ARRL, ITU and No-Code Intergnashinal

To add your message and to make comments, please see the company's web site at:

http://www.ka8dzz.com/heineckin.htm

Yes, I admit it ! I am ANTI-CODE ! For hams that want to use code, I say fine, go for it. But maintaining code proficiency as a requirement for HF usage is totally ridiculous and completely without merit! Face it guys, code has no place in modern communications except as a hobby. If I either desire or for some reason I cannot possibly imagine need to transmit code, I can have my PC do it with far greater proficiency than anyone using a key. I see it as a live and let live proposition...for those that wish to keep using this dusty dinosaur from the past, I say fine. But in the same regard keep your noses out of my business when I wish to have no knowledge of the same dusty dinosaur.
Cedric <sabbatai_zvi@hotmail.com> wrote in message
news:3718ad01.16376116@news.earthlink.net...
J1aguiar & friends,

I really think NO-CODE is a mis-nomer.

They SHOULD be called ANTI-code, for that is the net effectof their destructive efforts, in my opinion.

I wonder if anyone has seen this rather axcellent and well thought-out editorial by KA7NOC from his web site?
= = = =

KA7NOC on CW

Well, it had to happen sooner or later ! My opinion on the morse code requirement for obtaining an amateur radio license ! I debated for several months whether or not to add to the many opinions on the web. And decided , what the hay, I'm going to do it ! Obviously since this seems to be a "CW" site, you must have guessed by now that I enjoy operating radio using the morse code for communication between myself and other hams ! So you probably already know where I stand on the issue. At any rate, here is my opinion on the subject. First off, I want to say that I am not an "O.F" (that's Old Fart for the unwashed !). I'm in my mid 30's and have held "KA7NOC" since 1982. I came into the hobby near the end of the era where you had to go to the F.C.C. to take the amateur exam for any class license other than the "novice" license. In fact , I never went to the F.C.C. to take any exam. By the time I was ready to upgrade to "General", the V.E. program was well under way. Why does that matter ? Well, I just wanted you to know that I am not set in my ways . I'm from the spaceage man !!! The code (in my opinion) should remain a license requirement for operation on the HF amateur bands. What some people don't realize is this is an international agreement among other countries which belong to the ITU , International Telecommunications Union. This is not just an F.C.C. ,

A.R.R.L , U.S.A. issue ! Several countries would have to agree to abolish this requirement from their licensing structure as well. I have heard all of the argument's for and against , with valid points on both sides. However, I still am on the pro-code side of the fence.

Some have said , " I can't learn the code " . Hogwash, anyone who set's their mind to it can learn the morse code. It simply is not that difficult, and 5 WPM is very slow. Besides , the amateur community has given up the code requirement on the VHF bands. So in reality, you don't need to learn the code to obtain an amateur radio license. This always happens when there is a lessening of the requirements in any organization, they always want more ! Just give me a piece at a time !

I will admit, when I first became interested in amateur radio I thought, "oh man , I gotta learn the morse code ? " . But let me tell you something , that was the most challenging part of the whole license ! And I am glad that I stuck with it , it took me over 4 years to buckle down and get serious about it . Most non-hams that visit my shack are amazed that I know the morse code ! They are more interested in that aspect of the hobby than anything else !

So why the code ? This is the 90's not the 30's ! That's right, and all the more reason we should keep this requirement. It is what makes amateur radio different from the other radio service's. It's tradition, history and pride. We are so quick to get rid of things that have a rich history and are traditional. What is wrong with sticking with tradition anyway ? Always giving in to the ill- informed for fear of "loosing" something ! Something else to consider, how do you know you won't like something if you never give it a try ? I mean a real try, not just 5 wpm code either. I'm talking about being able to carry on a conversation with someone in code as you would on phone. It is being done everyday , you are just not hearing it ! I have heard many times both on the air and over the internet about people who hated the code , until they mastered it. Don't sell yourself short by thinking the code is too hard, you are probably smarter than that ! Consider it a challenge, not a deterrent ! Do you see the class as half full or half empty ?

Some have said , " why not test on the use of other modes of communication's as well ? ". They are right, and I think they do. I remember studying about RTTY and satellites when going for my extra class ticket. And I think they should require that you have a working knowledge of other modes just as they do with CW ! The only real argument the anti-coders have is that the code is outdated as a form of communications, and they are right there ! UPI is not sending news via morse code, that's for sure ! But the amateur radio service is not UPI or the Coast Guard or NASA. The amateur radio service is just that "amateur" .

I don't plan on using the code, so why should I have to learn it ? Well, what if you don't plan on building any of your own gear ? Should you not have to be tested on the electronic theory part of the test as

well ? Or what if you only want to fly remote control airplanes using VHF/UHF amateur radio freqs. ? Should you not be required to be tested on the HF band segments because you don't plan on using them anyway ? Where does it end ? It is easier than ever before to obtain an amateur radio license. With VE exams given every month or so in many different locations across the country, test questions over the internet etc. The only real challenge is the code requirement ! And some countries require you to send as well as receive ! Lets face it , there are certain requirements for getting an amateur radio license, once you meet those requirements and pass an exam you obtain those privileges ! Simple, eh ?

Well, there you have it folks, my opinion on the code requirement. Like it or not , I stand by it ! Try to remember that this is only a hobby and we are all members of a small community of people sharing the same interest's . Find an elmer to help you learn the code , you may be surprised at how fun and challenging it really is! "

- KA7NOC

Not 'strangely silent', 4-1000. Bored Shitless would be a better
definition. You really need to take a reading comprehension class.

I don't recall 'defending' what Swatch did, I think the point I was
trying to make is that a bunch of Handy Talky Geeks who write
like they quit school in the third grade sending emai to Swatch
was not the best way to fix 'the problem'. And I also recall saying
that it seemed to me it was a very minor problem.

But anyway, our heros have saved the day and defended amateur
radio from the evils of commercial advertising, so we'll just have to wait
until the next big 'problem' comes along. Maybe you and Tim can
find something to piss on each other about until that comes
along, just to keep us entertained ......

>>Oh, I love this post...

Hi Gang

While this is directed ESPECIALLY to... I
would ask anyone reading this message with more than one tower to pse reply
as well.

BACKGROUND

I am now in the midst of litigation...with respect to the right to
install a second amateur radio support structure (tower).

As expected, this will be a struggle.

>>(oh yes, like cancer, life as a parapalegic, being a POW)

And, I am asking at this time for some
data which will prove invaluable at a point in the near future.

Basically, the Town will be taking the position that their required
ACCOMODATION under PRB1 has been fully met by allowing me one 115 foot tower.
They will then assert that they are under no obligation to permit the
installation of a second structure.

>>(are you WOR or an amateur. Why do hams think their towns need to let them act like
professionals ? Why do zoning laws for toolsheds exist, but hams think they can litter
their yard with multiple towers)

So that is the deal - in a nutshell. Their position is that they granted me
one and anything else is not permissable - and they feel no obligation under
PRB1 or... General Law 40A for further zoning relief.

<snip, more whiney Contester pissing and moaning about how hard life is for
them>

4) Rationale (eg: NEED BASIS) for towers number 2, 3 or whatever

Point number 4 is the critical one as far as any court test is concerned.
Please take a moment to craft a few lines on this one with some care.

For example:

What COMMUNICATIONS NEED created the basis for the second tower, third tower
etc? What communications objectives were you trying to solve by adding the
second tower.?

The way these guys attack us is to force us (the HAMS) to JUSTIFY OUR HEIGHT
REQUIREMENTS. This is called shifting the "burden of proof" - and by

placing it on us (the hams) they make this a tough sell.

>>NEED ? You don't NEED anything more than a wire and 500 watts... Especially wgen you won't be serving th public good as in the Service end of the ARS Contests don't serve the public good and none of the 216 million US citizens cares if you work P5 on 160.

The only way to beat these guys is to stick together. Before this is over, I will spend a KING's RANSOM in order to attempt to win this case. If I win, all hams in ... will have a test case that may be cited if they wish to try to erect a second tower in their town. While my case would never be binding on another TOWN, it will become a useful "arrow" in one's "quivver" that will no doubt prove an asset - even in another state....because it will create a precadent that a "ham" attorney may cite in court briefs.

>>Nice of you to waste the court's time with your zoning vendettas. I'm sure all the people with REAL UNRESOLVED CIVIL CASES WON'T MIND A BIT... And learn to spell quiver if you are intent on using colloquialisms.

So, by helping me, we all will be helping ourselves.

>>Only if we chose to risk our lives on a 115 foot tower someday. Talk about a God complex.

So far, I know of only one other case that went to trial for a second tower - it was down in ... - so there is NOT much legal precedent for this stuff.

So, pse help me break some new ground - I will keep you posted over time where this stands.

>>PLEASE DO, and make sure you write a piece for QST on it, we all want to pay to READ YOUR PERSONAL LIFE AND DEATH STRUGGLES in HAM WORLD.

<mid life crisis generated club cheerleading omitted>

Tks again - and pse EMAILS DIRECTLY to ME and not to the reflector.

73

JEFF

<note caps.. he shouts his name as do other contesters as if to say- LOOK AT ME WORLD I AM A CONTESTING HAM. HEAR ME ROAR>

The only way to beat these guys is to stick together. Before this is over, I will spend a KING's RANSOM in order to attempt to win this case. If I win, all hams in ... will have a test case that may be cited if they wish to try to erect a second tower in their town. While my case would never be binding on another TOWN, it will become a useful "arrow" in one's "quivver" that will no doubt prove an asset - even in another state....because it will create a precadent that a "ham" attorney may cite in court briefs.

>>Nice of you to waste the court's time with your zoning vendettas. I'm sure all the people with REAL UNRESOLVED CIVIL CASES WON'T MIND A BIT... And learn to spell quiver if you are intent on using colloquialisms.

So, by helping me, we all will be helping ourselves.

>>Only if we chose to risk our lives on a 115 foot tower someday. Talk about a God complex.

So far, I know of only one other case that went to trial for a second tower - it was down in ... - so there is NOT much legal precedent for this stuff.

So, pse help me break some new ground - I will keep you posted over time where this stands.

>>PLEASE DO, and make sure you write a piece for QST on it, we all want to pay to READ YOUR PERSONAL LIFE AND DEATH STRUGGLES in HAM WORLD.

<mid life crisis generated club cheerleading omitted>

Tks again - and pse EMAILS DIRECTLY to ME and not to the reflector.

73

JEFF

<note caps.. he shouts his name as do other contesters as if to say- LOOK AT ME WORLD I AM A CONTESTING HAM. HEAR ME ROAR>

What a silly question Rich. Are we to believe that you are not a racist or a bigot because your Jewish? You are no more Jewish than Adolph Eichman and considerably less Jewish than Adolph himself. After you played the Jewish card when you recieved your huge NAL I asked you the dates of major Jewish holidays, Rosh Hashana, Yom Kippur, and Hanukkah and you had no idea.

The FCC is wacking you not because you are a racist or a bigot but rather for your questionable conduct on the amateur bands.

anything i.e. senior citizens, nets, and even anti-semetism to try to avoid the inevitable. Most amazing because both bragged on the air that they were packing heat at Dayton. Tom claims to have had a 10mm and Richard a 9mm for protection. Richard had also bragged about putting people in bodybags and blowing them away if he ran into them at Dayton. Not Cool Richard!

Hi Sam, I'm afraid you're not going to find too many folks to chat with
using that Heath "Sixer." Almost everyone has shifted to FM. You might
QSY to rec.radio.amateur.boatanchors to see which 6m frequency is being
used by the AM boatanchor gang; I believe they have a single calling
frequency they all monitor (50.4 Mc?). (I installed a squelch on my
"Twoer" back when the only repeater in town was AM -- K6MYK on Mount
Lee in the Hollywood Hills, CA; it sure made for more pleasurable
monitoring!)

The details of a country's license requirements are left to the
individual member nation. Remember, the ITU is just a body of the UN.

Do you really think this is going to get you off the hook? Saying people are against you because you say you're a jew? Give me a break. There are tapes of you saying nasty things against jews a number of years ago, so you can't go there. You're license is gone after 2000, so get used to it. Here's some of the tape:

"Now there's a nigger if there ever was one. Take your black ass and go back to Africa. You better take another hit on that crack pipe, boy. Lawd have mercy, I can't believe these black people in here. Ah hell, black woman got all that black bushy hair, looks like a brillo pad, turn her upside down and use her head to scrub your pots." This damn porch monkey spear chucking bubbas talking about good white folks." (unknown voice telling Rich that he was recorded by the amateur enforcement line). " Good I'm glad, you can take that enforcement line and stick it clear up your ass, I don't like niggers, N1GJT de WB2OTK. You know Jigabo is worried about what goes on here. Hey Doc, your a biggot. What the hell is the NWACP gonna do? They ain't gonna do shit. They need to call a real nigger, Louis Farakahn." He goes on to call Al Sharpton a real nigger and admit that he (Rich) is indeed a racist. " You're right. I'm a biggot and I'm a racist. I don't like niggers, I don't like niggers I don't like people who come to this country for a free lunch". This from Rich who doesn't hold a job. Being a jew, (is he?) isn't going to save your fat from the FCC fire.

Actually Cedric I just got tired of pointing out pathetic your arguments were, you had your head completly up your ass regarding 3rd party international traffic, saying it wasn't permitted 'period' I had to point you to the ARRL web page that shows all the countries we have agreements with.

You didn't have a clue that one way transmissions were permitted and that there are special considerations for space transmissions. In a RAGE of ignorance you tell me that no brand names are allowed to be mentioned by most countries including all European countries, of course I emailed you the reply from RSGB, where do you get this stuff Cedric? Do you make it up for fun? Try spending a day or two acutally doing some homework before you start pointing out how stupid the rest of us are.

I never once said I supported what Swatch was doing, I was questioning the amateur communitys responce as well as interpretations of radio regulations, you twisted it as best you could into your own fantasy debate making claims that if it's illegal "Tim" must be for it. Your a dweeb anon troll Cedric, nothing more. Get name, post a call, do something but have the balls to at least stand behind your words, I don't give a damn if you want to write the story of Heineken on the moon and post my name and and call, just sign yours. Nobodys going to fire bomb your house Cedric, but it's time to step up to the plate or simply resign as another nameless spinless troll.

Just a few short hours! DON'T Miss it!!!!

Get that TinyTenna powered up for a ring-side seat!

Tonite:

Live from Belgrade:

The Liberty Net will have a focus report on the "Klinton's little war" We have a excellant oppurtunity to interview Mr. Slobodan Milosevic, and this interview will be played on 3950 tonite, with commentary by W1WCR and WB4AIO.

They will also examine some activities of one named "PorkButt" He has been the focus of a ongoing investigation by Mr. R. Hollingsworth. They have some inside information on the fate of Porkbutt and a possible NAL to be issued.

Also tonite,

Will K5BLB tell us who the "faggots" are? Will he tell us what should be done with them??

Will K5ZU aka "ArkyBob" come on with one of his great speeches??

Come and find out!!!

"Where's that big ol' NitWitNaziNet?"
"I want to hear them whine tough!"

i disagree totally.
when i lived in phoenix 15 years ago,
i would hook up my parents cheapo sw tv cassette player
to their tv antenna.
ok,
it wasnt digital audio,
but it was great to hear music from around the world.
im really excited to be getting back into the hobby.

Been to Yellowstone, and after almost being killed by crazy old people in GIANT motorhome driving in excess of the posted speed limits. Your operating QRP in the back country wont even be noticed. Just remember to pack out all of your trash, especially dead batteries and all should be okay.

I'm looking for the old AEA "Doctor DX" Contest Simulator. There was an interface unit and software that ran on a Commodore 64 or 128. I also need the computer and accessories required to run it.

If you have one of these around and would like to get rid of it, please send me an e-mail.

73,

> certainly IS NOT in the best interest of amateur radio.
One I think that it is in the best interest of amateur radio that the
station of W2OTK/WB2OTK take a break from the ranks of amateur radio.
Its been my expeirance in the over 3 Years that I have known this
station I have heard him make serval racest slurs. I will not repete
them to do that would do anyone anygood.
I also beleive that the right to free speech does not include ones
right to stand on a street corner and yell nasty words nor does it give
anyone the right to yell FIRE! at the movies. Amateur radio is like a
very large street corner and is subjected to the rules that the FCC
subjects them to. Something about community stardards which the supreme
said that communities have the right to pass laws governing community
standards. George Carlin had taken this all the way to supreme court
with his seven dirty word that you can't say on TV. The supreme court
ruled against him. So the FCC has the right to govern what is said over
Amateur Radio. I would sujest that one would read and go by Paul
Seagal's Amateur code if one is to stay out of trouble with the FCC. If
you want to read the amateur code go to

http://www.dirtball.com/code.html
>
> Kevin, I know this whole racist incident bothers you. And yes, it IS

> WB2OTK asks: "Have you ever met a racist jew"? What better way for the
> whole world to see that....yes....there ARE racists liberal
> Clinton-loving jews and this one just lost his license for being a
> racist!!

In my opinion being Jewish has nothing to do with this. I would call
this guy a agnostic. I me in all truths he eats pork doesn't respect the

sabith. He even celebrates Christmas What jewish person does that? I got Christmas card from him last year. I have been told that his child married a practicing Christan. The Jewish faith has strong rules about marring out of faith. The Jewish faith doesn't celebrate the brith of the savor. So I don't think that being Jewish has anything to do with anything. So in all practacality we could call him a agnostic.

>
> We're going down this slippery slop anyway, Kevin. Whether you like it
> or not. So we might was well drag a few WB2OTK's down the hill with us.
> The weight alone from these degeneates might help to slow us down.....

Well the fact that amateur radio is going down hill. We need the FCC to keep on cracking down on these stations that give nothing back to the sevice, or who abuse the service. Also those who give false information over the air waves. This free speech issue would be a good start! So I beleive that dragging a few bad apples down the hill could possibly raise the standard of amateur radio, make the hill higher.

As far as the OO program is concerded, I think that if the service isn't abused it is a good service to amateur radio. Heck what if you transmitter is producing a image somewhere else and it is interfering with important radio communiucations. What if your breaking some rule and wasn't aware of it. I think that this is a good service to us all. Thats just my opinion I could be wrong

Did you know that in these modern times, it is considered liberal to be racist?
It seems the majority of people are tight assed about racism now, which makes even
the old liberals more along the lines to conservative compared to us free thinkers who are
not afraid to admit that they prefer their race over others. ;)

Since when did preferring your race over another become illegal?
I'm white and prefer being around white people.
Am I the only liberal person left in society?
Even the liberals sound like a bunch of tight assed conservatives when it comes to racial preference.
I thought the motto of liberals was "to each his own".
Doesn't that mean I should have a right to dislike as much as I like?

If people are allowed to speak in different languages over ham radio though they are all Americans then doesn't that give people the right to speak in whatever content they desire too?
I always wondered why a person would sit around and watch or listen to something offensive and then bitch to the broadcaster of the offensive material.
Why didn't they just frigging turn to another channel in the first place?
Why do people want others to take responsibility when they can't even have enough responsibility
to turn the dial?
Talking about hyprocrites.

If you already know enough Epseranto to write a simple letter, I suggest that you contact the _Internacia Ligo de Esperantistaj Radio-Amatoroj_ (ILERA), whose address is P.f. 7223, DE-15872 Eisenhuettenstadt, Germanio (Germany). The last I knew (1997) the president was Wolf Krueger DL1 CC, and there were more than 500 members (and an unknown number of other esperanto-speakers who are not ILERA members). If you _don't_ already know much (or anything about!) Esperanto, then I would suggest that you visit some of the links from <http://www.esperanto.net>.

I see that a couple of others have already responded to your post with the customary silliness. I've been unable to find any basis whatsoever for the notion that more people speak Klingon than speak Esperanto (and I've tried!). There's certainly an orders-of-magnitude larger web presence in Esperanto than in Klingon (and, in fact, of the handful of webpages which are actually _in_ Klingon rather than just mentioning it, a significant number belong to people who are also fluent in Esperanto!). OTOH it's likely that the maximum number of people who are really competent speakers of Esperanto is about a million and a half, just a drop in the bucket among 6 billion humans... although I have the impression that the percentage of ham operators among them is higher than in the population at large.

I suspect that through ILERA you can also contact folks who will happily render the text of your QSL card into other languages, the 6 official UN languages for starters (which covers rather less than 50% of humanity, but is still a pretty good start).

Best wishes! George

John
From what I've read of the responses you would be better off with a used
Apple 11 color computer monitor! I use one on a busted vcr (eats tapes)
with computer speakers for sound. The best thing is the Apple uses a
RCA phono jack for the video input and it has a real sharp picture.
Maybe you can find one at a yard sale or trade yours in at a computer
store for what you need!

Ron,

There's a bunch of CW software for the PC at:

http://www.ac6v.com/pagez.html

There is also a program written by a Japanese ham called
PED that does what you are looking for.

If you got the code under your belt you wouldn't have to resort to any illegal freebanding to get DX. You are setting a poor example to aspiring hams by suggesting such illegal out of band operations. As a licensed Amateur you should know better. If you had posted your inquiry on rec.radio.cb I wouldn't be here whining.
Flamers please inform me. I'd like to know where I'm out of line on my pet peeve here? Thanks. Tom

<snip>their destructive efforts, in my opinion.
> You don't agree with me ergo "destructive."

I wonder if anyone has seen this rather axcellent and well thought-out
editorial by KA7NOC from his web site?
> Yes I did. Basically if you're anti=CW testing you're only interested in the money
(i.e.W5YI, GW), lazy, yadayadayada....

I enjoy operating radio using the morse code for communication between
myself and other hams...
>Continue to enjoy it..it's fun for you. No one is against that.

You like code, it was challenging, you buckled down. What does that have
to do with CW testing requirements?

It's tradition, history and pride.
So was the Dreyfus Affair, caveat emptor, Maginot Line, Tailhook,
"No Coloreds."

...give it a real try, not just 5 wpm code either.
That's the rub---the pro-CW are not happy with *just* 5wpm.

But the amateur radio service is not UPI or the Coast Guard or NASA. The
amateur radio service is just that "amateur" .
>That's precisely why CW shouldn't be a test requirement.

Where does it end ? once you meet those requirements and pass an exam
you obtain those privileges !
Simple, eh ?
>Hopefully, society will never stop changing or trying new things. BTW requirements in any
field can change over time. The dispute is whether they should change; amateur radio is
like any other field-medicine, law, law enforcement, firefighting, aviation,
military-there will always be members who oppose change. Surprisingly, we all survive
change.

As for being a service in time of emergencies, I refer you to the May
QST article. Amateur radio needs to change or no one will need it.

I'm new to AR but one of the things that has stuck in my mind is I don't
see too many young hams in QST pictures, ham books, or young VEs (under
30). This is definitely a field with oldsters, me included. Old people
are set in their ways, conservative, resistant to change. Younger people
bring fresh ideas, new concepts, energy, things needed in AR.

My 2 cents.

1309. QTC No. 11

Monthly Morse QTCs as Audio Files
==========

Starting with QTC No 10 e.g. the one of Sunday, March 20, 1999, the
Deutscher Telegrafie Club announces that its regular monthly QTCs are
available in audio format (MIDI-type) at our web site
http://www.muenster.org/dtc/eindex.html in three different speeds: 12 WPM,
20 WPM and 30 WPM. As unfortunately not all browsers can handle these files
online, we did take care of that and offer these files as a ZIP archive for
individual downloads as well.

We do welcome any comments about this new feature in our guest book !

GM DR OPs = NW QTC NO 11 WID 4 PTS =

pt 1 =
PLC E.G. FAST DIGITAL DATA DISTRIBUTION USING POWER LINES ENDANGERS HF
RECEPTION IN DL = WE ARE ACTIVELY ENGAGED TO PERVENT THIS =

They are not legal in Israel. My advice to you is to leave them home.

At the airport, most tourists are not searched, many are not even
questioned here. However, some are and a few get their baggage xrayed.
If they find these radios the customs agent will want to make sure that
you are not some sort of criminal, you won't use them, and you won't
leave them here.

He may simply ignore them, tell you not to use them, ask for a customs
guarentee or make you store them in bonded storage. It all depends upon
the guy's mood and what he thinks of you.

You could look like a dumb tourist and just say "CB".

At a land border crossing, you will find them much stricter.

AFIK Egypt is not so nice. They restrict the import of many similar things,
including celluar phones.

I normally carry around a ham handytalky in my briefcase and have never
had a problem when I was searched. Expect to have your bags searched
when you go into a mall and many office buildings. In times of "high
security alerts", you may get searched at the bus station or stopped on the
street.

BTW, the teenagers in steet clothes with M-16's are soldiers on leave.

Geoff.

HEY RF ! - adleast it keeps them behind a microphone on a Saturday evening.
Better that than they be behind the steering wheel of an automobile after a
Saturday night of boozing at the beer joint in the next County.

What would you rather have... facists behind a SSB microphone
raising their blood pressure, or drunken facists behind the wheel of a
beat up old pickup at 2 AM, in the dark of night on the highway when the
beer joint closes? (of course this does not apply to certain stations
in Arkansas or North Carolina who are known for making late night "liquor runs".)

I looked at the site on the day Cogswell made his post. It was a great source of links to a lot of other "free banders" and even gave amateur calls for a lot of the violators. It's a good bet that several copies of that page were forwarded to the Feds. I'll bet Riley will have field day with all of this newfound info, and the FCC didn't even have to go out and work to find them...

It's not surprising that the web page is gone now, but once you realize you have shot yourself in the foot, it's pretty hard to get the bullet back in the gun...

You just don't get it. Lack of experience I guess. I heard of an OO just last night that sent a guy a notice for "being wide". Now, I wonder , how did this astute OO come to this conclusion? Did he use the appropriate test gear, or did he just use his receiver to come up with this? The ham in question was running 100w , talking to a guy running a KW. The guy running a KW didn't get a notice. Also I know for a fact that the guy running 100w has a properly set up radio with good audio quality and not overdriven. It's a sad fact that many OO's don't have a clue to the operation of a receiver. They will listen to their radios to determine signal width. Sorry folks, it doesn't work that way. If I have a radio running 100w and it is received at a low level, it will appear narrow. This is the natural operation of the filters in the receiver. NOW!, take the same exact radio and have a guy 3 houses down listen to it. He will be 60 db over S 9 and appear quite wide. Again, this is normal as per the operation of the current state of the art in filters. One guy sees him as narrow, and the other sees him as wide. And HE HAS THE SAME EXACT EMMISIONS!!!Then you hear the goofballs that say, WELL, HE WAS RUNNING POWER AND WAS WIDE!!! What a crock!!! If this was the case, he would be illegal.
Moral: You can't EVER measure the signal width of someone just by using a receiver. You must use a scope and pan adapter or spectrum analyser. etc. But I still keep hearing about OO's sending notices based on this method of determining width of signal. If I ever get an OO report, it damn well better be accurate or it will hit the trash can so fast the NBA would be impressed. As you can tell, I have a somewhat dim view of OO's, but this came from experience. Many just don't have a clue. And if this is true about the fcc giving them "near agent status" I think is a mistake, mistake, mistake.

If this is true, I sho nuff agree. OO's have no biz being enforcement officers. Many are just too damn ignorant for such a position. Not to mention personal agendas.

> Bet you change your mind when that first OO card shows up.

Did you check his equipment to come to this conclusion? OO or not, haven't we all tuned across signals that are much wider than others we hear on the band of similar signal
strength?

>If I ever get an OO report, it
>damn well better be accurate or it will hit the trash can so fast the

Mark, lets practice our breathing for a minute, ok? You sound as if you are getting ready to get mad about something that hasn't even happened yet. As far as the heresay from your friend with the "wide" signal goes, whats to worry about? I wouldn't worry about it. Staple the card in your log book, with a statement that the amplifier is operating within specifications and is not being overdriven (providing he actually -knows- that to be the case). Has your friend verified that his signal isn't wide? You are so typical of the OT PCA crowd on this newsgripe (with a few notable exceptions). Why not actually wait until you get wronged before the ranting starts, ok? These pre-emptive rants get tiresome. ;^) 73, Brian/N0iMD

1322. Heathkit HFT-9 Antenna Tuner - Basic Use Question...

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-18 00:00:00 UTC
From: dber@tiac.net
Message-ID: <371a3109.1216599@news.tiac.net>
Source record: 145383

Hello all,

I was able to pick up an HW-9 QRP transceiver locally for a reasonable price. I wanted to explore more than the 40M that I've been using with my Ten Tec QRP kit. It came with the matching HFT-9 Antenna Tuner which looks fairly basic (Two SO239 antenna jacks on the back - one to the transmitter, the other to the antenna and also some connectors for balanced line?!?) and three knobs on the front. The knob on the left says "Transmitter" and is scaled A-G, a matching one on the right for the "Antenna" and the center one is the "Inductor" 1-12. Unfortunately it did not come with instructions but based on looking inside it looks fairly simple. Anyone interested in giving me some basic usage instructions to tune up my 40M dipole on other bands (such as 80M). I have an SWR/Power Meter and would guess it is just a matter of turning the dials to peak the output power and lower the SWR but would rather get instructions rather than potentially damage the radio I just got.

If you reply to this message via the newsgroup, would you also be kind enough to post an email response which might prove fastest for me...

Thanks kindly.

Regards,

Dave

That being the case, why don't you volunteer your services Mark? Certainly
the amateur community would welcome your technical expertise as well as your
unbiased view on such things.

They never were going to use OOs for -enforcement-. One David Stinson got on
here and got all upset about what he -thought- Riley said, so that makes it
true, right? How bout looking at what the ARRL does with the OO reports
before getting all upset about it? Even better, go read the post from David
about the reply letter he got from Riley on the subject.

If I ever received such a notice I would send a reply asking
the following:

1. What does that even mean?
2. What was the basis for your assesment?
3. What equipment was used to make whatever
measuremnt(s) were taken?
4. What were those measurements?

<SNIP>

This is not as off topic as it might seem. Could someone share the secrets of locating an internet host/provider whose name is different from the url? That is, if I have a problem with www.xyz.com and want to communicate with the company which hosts the site which is www.somethingdifferent.com, how do I do track them down?

1331. Cherokee 6 meter HT rig, any good, will freebanders use it?

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-18 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseFAEILE.BxG@netcom.com>
Source record: 145392

While surfing the net (doing a search on the word "freeband" to see what questionable activities exist), found a page http://www.2waytalk.com/ah50.html describing a 6 meter HT by "Cherokee", whoever they are!

Who is "Cherokee" anyway? New Ham equipment brand? It'd be nice to have more venders of ham equipment for us hams. But that web page didn't say that you need a ham (no-code is good enough) license to use this HT. At least 2waytalk.com didn't explicitly call it a "CB" radio.

How good of a radio is this Cherokee 6M HT? For $209 it might be of interest. 6M is a nice band (hope it won't get invaded).

Anything to worry about? Conversely, is cheap 6M HTs a good thing for hams?

SB DX @ WW $OPDX.405
Ohio/Penn DX Bulletin No. 405

The Ohio/Penn DX PacketCluster
DX Bulletin No. 405
BID: $OPDX.405
April 19, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1VV, KE1AC, AI2Q, ND1V, W2SF, W3UR & The Daily DX, N5FG, N6RT, AH0W/OH2LVG, 9M2TO, DJ5AV & DX News Letter, G4BUE & DX News Sheet, G0KRL, OH2RF, RA0FN, SP5ELA, Socios del Radio Club Rosario, VE2NW, VE3XAP and YS1RR for the following DX information.

3B9, RODRIGUES ISLAND. Thanks to the 3B9R DXpedition operation, Robert Felicite, 3B9FR, is now back on the air. Robert has been off the air for over 5 years for a number of reasons. One reason given is that he lost nearly everything he owned to a cyclone. Robert was heard this past weekend on 30 meters between 1330 and 1400z and between 2130 and 2200z. QSL direct only (this may change later).

4U1ITU, ITU HEADQUARTERS (GENEVA). The "DX News Letter" reports that Eric, W3DQ, will be active as 4U1ITU during his spare time after 1900z now until April 25th. He will emphasize his activity on RTTY and the WARC bands. QSL via bureau.

FM, MARTINIQUE. Pertti, OH2RF, intends to operate as FM/OH2RF between May 1-7th, with a CEPT licence probable. He is visiting FM5BH during his week vacation in the Caribbean. There will be special attention to European stations on both CW and SSB. QSL via OH2RF, Pertti Turunen, Sulkapolku 1 A 2, SF-00370 Helsinki, 37, Finland.

FR5/T, TROMELIN. QSL Manager Zareh, VE2NW, informs OPDX that Jacques, FR5ZU, will be active from Tromelin Island (IOTA AF-031) from now to May 4th. Activity will be SSB only 40-10 meters. Zareh will run a net around 0200z on 14256 kHz and will try to run as many as NA stations as possible. As this bulletin was being prepared, QSNs indicate Jacques has been active on 20 meters and as late as 0400z. There was also one report where he was active on 28470 kHz around 1430z. Jacques will be working in Tromelin and will try to be active as much as possible during his rest periods. QSL all contacts, except JA ones, is via VE2NW. JA

contacts go to the JA QSL Manager JA8FCG.

GD, ISLE OF MAN. Ian, G0KRL will be operating from the island May 1-8th, as GD0KRL/P. This will mainly be a vacation for Ian, but he hopes to be active every day. Activity will be on all bands mainly SSB with some RTTY using an Alinco DX-70 and multiband vertical antenna. QSL via the bureau or direct to his home callsign. E-mail QSL requests for the bureau can be sent to: G0KRL@ARRL.NET

HQ6RCH OPERATION (QRT). The Radio Club of Honduras was active this past weekend from Little Key Island. Little Key measures just 25 x 25 meters in size (!) and lies at N 16 degrees, 3 min., 36 sec. and W 86 degrees, 58 min., 58 secs. They used the callsign HQ6RCH and were active on CW/SSB. QSLs will be handled by the club president, HR2JAW. The club reports that there is NO IOTA number yet for this island, but Joe, HR2JEP, says that will be forthcoming.

INTERNATIONAL MARCONI DAY (IMD). Just a quick reminder that this event takes place April 24th, between 0000-2359z. The event is sponsored by the Cornish Radio Amateur Club of Cornwall England. Check out the Web page: http://www.users.globalnet.co.uk/~straff/
There will be 58 Marconi Special Event stations participating, many with certificates offered.
Look for stateside station W1AA/IMD to be active, and it will represent the 1903 Marconi Transatlantic Transmitting Station on Cape Cod. DX stations QSL via the bureau and Stateside stations via the CBA with a S.A.S.E.

IOTA NEWS......
AS-073. Tex, 9M2TO, will be active from Redang Island as 9M2TO/P May 1-4th. Activity will be on 40-6 meters on the normal DX frequencies. QSL via JA0DMV (via JARL Bureau is OK).

NA-046. Henry, KE1AC will be operating from Nantucket Island, Nantucket County, Massachusetts (MA-007S), April 20-22nd. He will use his ICOM 706, 100 Watts, vertical antenna on 10, 15, 17 and 20 meters, depending on propagation. Look for him on the IOTA frequencies.

NA-062. Bob, W2SF, will be active from Lower Matecumbe Key in the Flordia Keys April 23rd through May 7th. Activity will be on all bands plus the WARC bands CW/SSB/RTTY. Bob informs us that this is a practice run for his upcoming trip to Iceland (see TF below).

QSL INFO AND NEWS......
RA0FN QSLs go to: Viacheslav Davidenko, ul. Yuzhno-Zelenaya 80-22, Uglegorsk, Sakhalin Island, 694900, Russia

Raymundo, YS1RR, reports that as of April 10th, Franz, DJ9ZB will be QSL Manager for his two sons John, YS1JR, and Ray Jr., YS1RAY. Franz will have the logs for all QSOs starting January 1, 1999. By the way, Franz is also YS1RR's QSL Manager. Raymundo mentions that the YS1JR callsign

was initially his father's, Jose Rodriguez (who died in 1996), but was reissued to his son (who was YS1JRG) by the PTT authorities.

NEW ADDRESS. Rob Wright, ND1V, informs OPDX that many cards for his VQ9CV operation are being sent to his old address in Key West. QSL cards SHOULD be sent to his new Virgina address. His new address is: Rob Wright, ND1V, 1409 Eaglestone Arch, Chesapeake, Va 23322

YI9CW QSLS. Tom, SP5AUC (ex-YI9CW), has left Poland for Vietnam on his new Foreign Office assignment. Tom apologizes for delays in answering his QSLs. The backlog of direct QSLs for his YI9CW operation is now being handled by Mirek, SP5APT. Tom hopes that this will finally clear the problems associated with his huge 100k QSOs record. Zygi, SP5ELA, is a back-up manager and has access to YI9CW logs. If help is needed, please send E-mail to: zygi@sp5pbe.waw.pl

S79AG, S79FAG, S79YL, S79ZG LOGS ONLINE. Doug, N6RT, reports that he has received and put online the S79 logs from the Germans currently operating from Seychelles and they are updated daily. Also, the S79AG logs for Erik's (SM0AGD) March, 1999, operation are also now online. The logs can be found on the Web at: http://dx.qsl.net/logs
Doug also mentions that the recent OH0M logs, as well as many other logs, are also there. New logs are added weekly in addition to a list of links to other logs on the net.

DO YOU NEED A QSL CARD FOR YS1ZV, CU3AV, HR2RDJ, HL9JF, HH2/KB0QNS, N4GFO/KH2, N3SIY/HH2, XE2UVB, KL7IYD, J37LK, HR2A, YN4/WK6O, YN4ZUJ, VY1JA, HR2KOS or YO2CDE (before 1999 only)? Reportedly all these stations have the QSL Manager KB5IPQ. Sources from the ARRL W5 QSL Bureau reports that KB5IPQ is not an ARRL member, and he refuses to answer these stations via the bureau. It is highly recommended to QSL direct to KB5IPQ.

RRC "NORTH POLE 1999". The "International North Pole Expedition" with the "Russian Robinson Club" is now active until April 25th. It is under the sponsorships of the Federation of Parachute Sports of Russia in accordance with the direction of the official preparation and realization program of the celebrations of the 70th Anniversary of Polar Aviation, the 70th Anniversary of foundation of the First Polar Station at the Franz Joseph Land and the 50th Anniversary of the First Skydive onto the North Pole. This expedition is truly unique. It is the first time that an International Expedition will be routed via: Moscow - Murmansk - the Franz Joseph Land - North Land (Srednij Island AS-042) - North Pole. This expedition is in preparation for an expedition to the South Pole, whereby new technologies pertaining to performance in the polar conditions are to be worked through. The callsign of this Expedition is RV3MA/0. Operator is Roman. QSL via RV3ACA, Elen, P.O. Box 13 Moscow 127521 Russia. The special callsign of RRC`pedition is R3RRC/0. Operator is RV3MA. QSL via RW3GW, Valery, P.O.Box 3 Lipetsk 398000 Russia. There will be a special "RRC-North Pole-1999" plaque (the wooden plank 20x15 cm. on the metallic base) available for QSOs with R3RRC/0. Cost is 23 (USD for EU), 25 (USD for DX) and can be obtained via the plaque manager RW3GW (via DL6ZFG,

Rolf Rahne, P.O.Box 15, D 39241,Gommern, Germany). Also, check out the Russian Robinson Club Web site at: http://www.stinol.lipetsk.ru/~rrc

S7, SEYCHELLES. The "DX News Sheet" reports that Gavin, GM0GAV, will be active April 22nd through May 5th as S79GT "while on honeymoon". Activity will be CW on 20/17/15/12/10 meters and possibly 6 meters. QSL via home callsign.

SPECIAL EVENT. The "Socios del Radio Club Rosario (LU7FW)" will be active as L27FW from May 16-23rd, in celebration of the 75th aniversary of the contact between Carlos Braggio (r-cb8) and Ivan O'meara (z-2AC) establishing the world record distance between Buenos Aires and New Zeland in 1924. For more details see OPDX.404. QSL via LU7FW: PO Box 263 ZIP CODE 2000 Rosario, Argentina.

SPECIAL EVENT. The prefixes CI3 for VE3 and CJ3 for VA3 Canadian amateurs have been approved for use in the "Region of Peel" to commemorate the 25th anniversary of the "Incorporation of the City of Brampton" for the time period April 10-25th.

SV/A, MOUNT ATHOS. Monk Apollo has been active again as SV2ASP/A on 20 meters SSB. Check the 14252 kHz (net) between 2000 and 2200z. Also, look for him on 20 and 17 meters on Fridays and Saturdays on SSB and possibly RTTY and Pactor. QSL direct.

TF, ICELAND. Bob, W2SF, is currently planning an operation here which will take place August 27th through September 7th. His callsign has not been announced yet, but activity will be on 80-10 meters plus the WARC bands CW/SSB/RTTY.

XX9, MACAO. The "DX News Letter" reports that Motoi, JK2PNY/VR2SS, will be active from Taipa Island (AS-075) until May 9th. They state his callsign may be XX9TSS. However, "The Daily DX" reports that Motoi will concentrate on 6 meters. So, HF activity may not happen. QSL via JK2PNY, Motoi Kawattsu, 205 Mezon 3-17-15, Nishisugamo, Toshima-ku, 170-0001 Japan.

1334. Re: CW does not help stranded fishermen

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-18 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7fdg9h$qop@news.Hawaii.Edu>
Source record: 145395

Carl R. Stevenson <wa6vse@fast.net> wrote:
>Jeffrey Herman <jeffreyh@Hawaii.Edu> wrote in message

>> You need to step back so as to get a global view of why the code require-
>> ment exists for HF privileges. RF at HF respects no boundaries, and as
>> communicators first and foremost, hams the world over should have at
>> least one mode in common. At present, there is only one mode all the
>> world's HF-licensed amateurs hold in common: CW.

>Jeff, that's a BIG stretch ... what about the JA hams who have
>HF access with no code? Not to mention the fact that, even in
>third world countries, the hams for the most part have modern
>store-bought appliances, just like most US hams.

Each nation is free to set its own licensing standards apart from
what the ITU recommends. But if you look closely at the JA's
code-free license, you'll see it's quite restrictive regarding
frequencies, power, and type of communications; its restrictions
are not unlike those of our Citizens Radio Service.

>In fact, in my personal experiences, the third world hams were
>more open to adopting new technology than most US hams.

You have no HF experience to draw upon, with your Tech+ license, unless
you've been operating CW with it, which is highly doubtful.

>> Whether one chooses to
>> use it or not does not matter; if the need arises he has it available to
>> him (maybe at a slower speed than when he was first licensed!). The phone
>> modes won't work as an international mode due to differences in languages,
>> but there are sufficient code pro-signs so that a meaningful QSO can
>> extend across language barriers.

>Your defininition of "meaningful QSO" falls FAR short of mine.
>I don't consider the "cookie-cutter" type of "QSO" one can
>conduct when limited strictly to the use of Q-signals to be
>very meaningful.

Content doesn't matter; at least intercommunication between all the
world's HF hams *is* possible utilizing code.

>The whole argument that "Morse is an international language"
>falls apart on several counts:

I never mentioned that it is a "language." It is the only common
mode that can be used among each and every HF ham at this time.

>> A digital mode could become the
>> international standard, but until such time that every ham worldwide is so
>> equipped and/or has the ability to build and self-maintain such
>> equipment, CW will remain the common mode.

>I see no reason why every ham world-wide MUST have a common mode
>with all others.

If you're that so short-sighted that you can't comprehend the importance
of intercommunication among the world's HF hams, then this conversation
ends here.

>www.somethingdifferent.com, how do I do track them down?

If you are using a UNIX system you can simply type:

whois xyz.com

to find out more about the domain.

If you are not using UNIX, there is a Web-based 'whois' interface at:

http://www.networksolutions.com/

Look at the Technical Contact and you may find what you are looking for. At the
least, you can find out what nameserver is holding the domain name and that
will put you on the path to an upstream provider.

Oris, et all;

First off I want to go on record, I do not, nor have I ever supported what Rich AND PHIL said on the air. And I have told them such both on the air and on the telephone.

Now, to the issue at hand. If indeed we have no freedom of speech when we open up our mouth's on the ham bands. And you folks dumping all over Rich (and ignoring Phil's racist obnoxious comments about white women) need to be brought up to speed. So here we go....

Al Abernathy (K4OKA)..Hey Dan...do you have to hose that whore your with down after a night out?

Jimmy Obrian (W4AMP,ex KD4CDB)..Dans up in Ohio waiting for his mother to croak so he can get her house.

George Ashley (W4FQF)..Dan was not in combat...he was a cook for General Westmorland.

Frank Todd (Bootlegger).. Get the hell of MY FREQUENCY you fucking asshole.

And of course ME, W4NTI....Fuck you Polly, you son of a bitch.

NONE OF THIS IS PROPER OPERATION ON AMATEUR RADIO. AND IT MUST STOP.

Don't jump on Rich ONLY....every damn one of you, me included are guilty of exactly the same thing.

It is now time to STOP this insanity. I beg, not ask, all of you present and past "participants" to stand back and ask yourself. Do you want to contribute to the demise of amateur radio, or do you want to help it move on?

I for one, want it to move on. My participation in this war is OVER. In all honesty I can not say I can or will ever forgive what these people have

said to me, about me, and about my family. At this point I have NO DESIRE to communicate with them ever again. However I have decided to END THIS WAR from my perspective. I have decided NOT TO BE A PART OF THE PROBLEM. Can the rest of you do the same?

Daniel L. Jeswald/W4NTI

The point Carl was making is that we don't have one now. Russian (cyrillic) cw is different from Japanese, Chinese, and about 20 other varieties of cw. The pidgen English version we use is convenient only for exchanging signal report, name, and QTH. Beyone that, if a Russian doesn't speak English, we're no better off with CW than a voice mode, and probably worse off than with a data mode.

Since we don't have one now, is it really needed at all?

Jeff ... as the subject line says ... it's my personal view.
I didn't claim it was an NCI policy, though I doubt that a
majority of NCI's BoD or membership would support your view
that "Morse testing MUST be maintained in order to assure that
all hams world-wide have a common mode." (antiquated as it is)

James O'Brien the third, of Hiram Georgia was one of the two sent a Warning Notice by the FCC. His went out on March 15th. In it, the regulatory agency indicated that O'Brian, that or someone using his callsign was and we quote -- "deliberately interfering with and jamming radio communications" on 75 meters. The FCC also charged the station with coordinating on 2 meter FM with another station to interfere with stations on various 75 meter frequencies.

Gosh...

I've been cited by an OO (4/16/95) and he was right. I also have had the FCC Engineer in Charge visit my station twice during the 80's due to a six meter interference problem. His team was highly professionaI and fair. The problem was my neighbors new 32" Color TV set, but he had a lot of political juice.

I also know the local OO coordinator quite well. He's one hell of a guy with a Phd in Engineering. When I had the FCC "problem" he assisted me with a spectrim analyser and also had the cable company here with all their equipment. I must be missing something, but would have to say 98% of us have nothing to worry about as far as OO's.

As for Rich, WB2OTK, he's earned every "reward" he receives from the FCC many times over. Rich definitely needs a trip to the woodshed and it looks like he's going to get one. I'm sure they'll do it "right" this time around.

Why don't you ask the person who wrote it -- I sure didn't. I only quoted someone else -- you even went to the effort to remove the quotation marks. Changing someone's comments then attempting to attribute the edited remarks to the original author is unsocial, Baker.

Jeff

The line section in the meter matters too. It isn't just the meter movement
as Bill apparently thinks. The guaranteed specification covers the entire
instrument. The meters are usually better than the spec, they should *all*
be better than the guaranteed spec, but it is the total instrument being
specified, not just the meter movement or its scale. Bird recomends using
a slug matched to the power level you expect to read. That tells me that they
want you to stay away from the lower end of the scale for best accuracy.
That makes sense because diode non-linearity is typically a bigger issue
at the lower end of the scale. This has nothing to do with the meter movement.

Gary

Hello Everyone:

Iï¿½m selling my President Jackson.

* This unit covers from 26.065 for 28.305mhz built in
* Has an open dual-clarifier with 14kc spread
* Am/ Fm/ SSB modes
* Mike gain control
* 10kc switch
* Roger Beep on/ off
* Nb on/ off
* Tx/ Rx lights
* Dual mode meter (signal/ mod)
* 30 watts output (ssb)
* 3-pin power socket
* Pa/ ext. speaker outputs
* All for $225.00 w/stock mike

Also this unit is a newer Jackson, it is black all around, except for
the small fabricated faceplate that goes around the signal meter and
channel display. (original received a large scratch iï¿½ looked really bad)

Extra equipment for sale:

NTR-1 Noise/Tone Reducer by JPS.

* Unit has notch/noise red/ bandwidth selections
* DC up to 15v
* $50.00

Thanks,

leel@uniserve.com

1355. F.S.. Pres.Jackson/NTR-1

Jeff, that's baloney. I've operated to the full extent of
my US Tech+ priveleges, including a lot of CW on 40m in the
early days. I simply decided that CW was "not my cup of tea."

I've also, as I've mentioned before, operated from Mexico,
where I lived for several years, with FULL HF priveleges
under a license issued by the Mexican authorities.

I operated extensively on all bands (including 160m) on SSB,
packet, and AMTOR ... so your claim that I "have no HF
experience to draw on" is totally without basis or merit.

That argument is as shallow and devoid of merit as Eric's
assertion that whether one is qualified or not doesn't
matter as long as one works hard/long for one's license.

> >The whole argument that "Morse is an international language"
> >falls apart on several counts:

That Morse can be used among each and every HF ham is also
a stretch ... there are LOTS of old-timers who haven't used
Morse in many, many years ... their ability to communicate
in Morse is certainly in doubt.
```

No, that is not what Bill apparently thinks, and in the testing of two ancient panel meters I did not suggest that.

The Bird meter looks like a 2% meter, judging by its size and workmanship.

> Bird recomends using
> a slug matched to the power level you expect to read. That tells me that they
> want you to stay away from the lower end of the scale for best accuracy.

In my posts on this subject I have advocated that. I am aware of the diode, but if the 43 is used at strictly 27 degrees or so the calibration should be OK at fairly low levels. Incidentally, there are some "hidden" adjustment pots that they set at the factory.

The Bird 43 has 50 markings. The smallest marking corresponds to 2% of full scale power. This corresponds to 1.33 SWR. They suggest "forget about SWR and just think in terms of forward power and reflected power". If reflected power is "very small" that is usually good enough, they say, except possibly in applications such as TV and certain pulse systems.

If I can't detect "any" reflected power, I don't care what the SWR is. If I really want to know small values of SWR I use a directional coupler (no diodes) and my spectrum analyzer to get the return loss.

The biggest hazards to the 43 are the hammerheads who abuse them.

OK Jeff, here is what you wrote in your original post -----

> I Cc'd a copy to qsl.net. They replied: "Thank-you for notifying
> us - we've cancelled his account. Too bad his license can't be
> as easily cancelled..."
>

I was not attempting to attribute the statement to you. Rather, I was trying to trim it down to the part which is relevant to my question. The newsreader automatically put the "Jeffrey Herman wrote:" tagline in front, as it does on every reply.

In any case, the question stands (to you, to the person who originally wrote the statement [presumably at qsl.net], to the group, whomever).....why ? What relevant section of the CFR did he violate which specifically provides for revocation of his amateur radio license as penalty ?

As for being unsocial, I'm sorry if it appeared that way -- I am but an amateur (pun intended) compared to some of the hams in this newsgroup.

Hmmm...A second tower? Two towers? I wonder what G-d would have done if they had been trying to errect TWO Towers in Babel?? Maybe we would all be double talking in different tongues. First you have to fight to get one tower into the neighborhood...and then two...and if they aren't all stacked up as they should be more towers will find their way into the neighborhood and people will move away because nobody will want to integrate with towers...and there goes the neighborhood! Average people won't want to admit it but most are anti-toweristic. IMHO there may always be some de-facto tower segragation anywhere...not just Babel. Please keep thinking, Hams need more license classes...BUT I dunno about more towers, I never met a Ham I didn't like and I think that towers are beautiful, Bob Wex w2ilp (Illuminated Lamp Posts) -- .- -..- .. --

I have several available.

Both UHF and VHF to choose from. They are all very clean, and power up and receive nicely.

Package includes radio, power cord, microphone, and mounting bracket.

These radios are two channels with PL installed. One channel is active - the other is empty. Currently in the 151 Mhz area for VHF, and 453 area for the UHF.

$25.00 per VHF radio, and $35.00 per UHF radio - Plus $10.00 USPS Priority Mail shipping - shipping discount for multiple radio purchases.

If you have any interest in these radios - please let me know ASAP.

Thanks for your time...

>Bill W0IYH

Thank you for proving my exact point, Bill. The top meter is accurate to 3% of full scale or +/- 1.5 milliamp anywhere over its tested range. It meets this specification perfectly. Yet it is off by 20% [actually by 25% if you more correctly used (Actual - Reading)/Actual as the equation.] So the real accuracy can be quite poor and get worse the lower the reading - and yet remain true to the percent of full scale accuracy statement.

In the case of the second meter, the full scale accuracy is 1%. With only a percent of full scale accuracy statement, this meter must read to within 2 milliamps over its range. Yet at the low end of its scale, the 25 reading, it is off only 1.1 milliamps - much better than its accuracy statement. But again, the true accuracy based on a percent of reading is

over 4 times worse.

I think Bill has misunderstood my point - which is that percent of full scale as the SOLE accuracy statement tells you little about how well the instrument scales at lower readings. He has said that his *NEW* Bird was tested over its range and came out with an excellent report. This is great, and I am pleased for him. But someone else could have an identical model that met the same accuracy statement yet give entirely different results - especially on low readings. I would expect the models would be somewhat reproducible but without additional information, you cannot say for sure. Bill's data illustrates this exactly.

1369. Looking for family type handheld radios.

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-18 00:00:00 UTC
From: Zekers <zzekka@intrex.net>
Message-ID: <371963AE.21F314F2@intrex.net>
Source record: 145430

I hope this is the proper group to post this in, so here goes...
I'm looking for a few hand held radios for general use: hiking, driving in multiple cars, etc. I have tried the Wal-Mart variety (I think they're Motorola's) and they just didn't have enough power to cover the distance or work around buildings, etc. I think they only put out 1/2 watt. I know very little about these things, so I'm not sure what to look for. Radio Shack has similar FM radios but they are still at 1/2 watt. They also have some 2 - 3 watt CB radios. But I don't know what the advantages / disadvantages of these are. I've recently used some 5 watt marine hand helds and they were great. But they also cost over $300 each.

So, any help would be appreciated either with your thoughts on these ideas or pointers to web sites with info.
Thanx, Zekers!

>the radio, I'm just not going to get on!". I have a question for people to
>answer, that would deem me a racist or bigot....have you ever met a Jewish
>racist or bigot? Rich Whiten, WB2OTK/W2OTK

Do you really think this is going to get you off the hook? Saying
people are against you because you say you're a jew? Give me a break.
There are tapes of you saying nasty things against jews a number of
years ago, so you can't go there. You're license is gone after 2000,
so get used to it. Here's some of the tape:

"Now there's a nigger if there ever was one. Take your black ass and
go back to Africa. You better take another hit on that crack pipe,
boy. Lawd have mercy, I can't believe these black people in here. Ah
hell, black woman got all that black bushy hair, looks like a brillo
pad, turn her upside down and use her head to scrub your pots." This
damn porch monkey spear chucking bubbas talking about good white
folks." (unknown voice telling Rich that he was recorded by the
amateur enforcement line). " Good I'm glad, you can take that
enforcement line and stick it clear up your ass, I don't like niggers,
N1GJT de WB2OTK. You know Jigabo is worried about what goes on here.
Hey Doc, your a biggot. What the hell is the NWACP gonna do? They
ain't gonna do shit. They need to call a real nigger, Louis Farakahn."
He goes on to call Al Sharpton a real nigger and admits that he (Rich)
is indeed a racist. " You're right. I'm a biggot and I'm a racist. I
don't like niggers, I don't like niggers I don't like people who come
to this country for a free lunch". This from Rich who doesn't hold a
job. Being a jew, (is he?) isn't going to save your fat from the FCC
fire.

James O'Brien the third, of Hiram Georgia was one of the two sent a Warning Notice by the FCC. His went out on March 15th. In it, the regulatory agency indicated that O'Brian, that or someone using his callsign was and we quote -- "deliberately interfering with and jamming radio communications" on 75 meters. The FCC also charged the station with coordinating on 2 meter FM with another station to interfere with stations on various 75 meter frequencies.

Boy, this guy is pretty smart advertising that he is operating illegally. I
guess he hasn't heard about FCC Enforcement Chief Hollingsworth and all of
the amateurs that he is busting for using the "free band".

I have heard that Hollingsworth reads these newsgroups also, I wonder how
long it will be before Mr. Cogswell gets a knock at his door ???

Dear John,
Your Composite Video Signal (CVBS)is interlaced Signal whereas Mointer accepts Non interlace Signal(Progressive Scanning). Therefore the CVBS has to be scan converted . The 9 pin D-plug has five Signals
R,G,B , Hsync & Vsync.
You can use SCan Conveter IC to establish your setup.

I'll provide more informations if you are intrested.
Regards
Murali

Not so fast!

Look at the first meter. At 10 mA the error is 5% and according to the "rule" it should be 18%, if it is a 3% meter. At 20 mA the error is 1.5% and it should be 8.0%. For the second meter at 25 mA the error is 4.2% and it should be 8.0% if it is a 1% meter.

The conventional rule is not functioning very well here because it is too simplistic. If it were, the percentages at lower readings would be much worse. The top reading by itself does not tell the whole story about the accuracy of a particular specimen. Because of small system nonlinearities the % accuracy fluctuates across the scale. It can be pessimistic at full scale, for example. The data for meter #1 suggests this.

D'Arsonval Taut Band Meter folks "try" to maintain the best *average % error* over as much of the scale as they can, despite the conventional interpretation of full scale accuracy. The data shows this, and I have seen it many times.

I repeat: these meters don't just become real poor %-wise at lower scale readings.

More about the Bird wattmeter later.

AND WHEN pray tell did the FCC become a JUDGE of the CONTENT of SPEECH?

I'll draw a line at the boundary of the famous "Seven Words (+ Three)" but anything
else is flat out illegal.

Also please Herb, DO NOT give me that HIGH OCTANE BULLSHIT that one surrenders
his LEGAL RIGHTS after one signs the copy of his or her Ham Operators Licence.
Yes, it is a licence, BUT I would also say that the A.C.L.U. would take great pleasure
in defending Richard Whitten - W2OTK/WB2OTK. In fact, if i was Rich, I would have
been on the phone to the ACLU much earlier.

This is CLEARLY a case of the FCC regulating areas where it has NO LEGAL JURISDICTION.

An that, my friend Herb, is THE TRUTH.

Chris, thank you for this post! Most of us
don't realize how blessed we are and that
the vast majority of folks in this world
have never even seen, let alone used, a
telephone.

I love my Sangean ATS 909 and Ten Tec RX 320
radios and would be lost without these tools.
You don't need to spend fortune to be well
informed.

I hate to tell you this but the FCC does have Juristiction over any
content of language that is spoken over the Amateur radio. Heck if this
where so we could all speak pig latin and it would be legal and we all
know that its not legal to speak pig latin over the radio. Content over
what is said over the radio can be governed by the FCC. Just like
content over what is yelled at a street corner can be governed by the
local law offical. Something about community standards. A community has
a right to determin what is legally said in public. This means tha they
community has a right to say what your political affiliation or how you
worship. It just means that if you yell nasty or offensive words on a
street corner you can be arrested. Thus this is the same thing on
amateur radio. Amateur radio is a very big street corner and porkbut you
can't be yelling offensive things on this very large street corner and
the FCC has the right to stop you if it gets bad enough and some of the
stuff I have heard you say in which I will testfy in need be. You try to
tell people about this free speech stuff and you have it all wrong. Just
try to yell fire at the movies. You will see how much you have free

speech. Take a brake and let it all go.
Of coruse this is just my opinion I could be wrong

I have an ADI/AT-600 Dual band Handi-Talki that I would like to sell. The radio was purchased in June or July of 1997 and has been kept in a carrying case for nearly the entire time since then.

I am including the lighter adapter, a leather case and the original NiCad battery which seems to be holding up well. No modifications have been made to the radio, however, I removed the small rubber cap on the battery that prevents dust or moisture from entering the battery charge jack and punched a small hole into the case at the same location to facilitate charging without removal from the case. The original charger, antenna, and lanyard are also enclosed with the original box and manual. I also no longer have need for a second antenna. An ANLI 2-in-1 dual band antenna with a screw on rat-tail or telescopic whip. Gail with this antenna is advertised at 3.2db VHF and 5.6db UHF. The radio has a wide receive range for those scanner buffs and has the ability to cross band repeat.

The radio is in excellent condition. I have seen the same radio advertised on sale for $250 which included the high capacity battery so I am going to offer this at $205. The five dollars should help cover the shipping costs. I will ship to the lower 48. The method of payment that I would prefer is a cashiers check or postal money order. If you choose to send a personal check, clearing time for the check will delay shipment.

My reason for selling is that I just purchased the Yaesu VX-5.

If I am slow to respond to email please forgive me, I am presently working shift work and my schedule sometimes prevents me from getting to my email everyday.
Please use the email address to respond.

tboyer@dvnc.net

thnx for reading this post.

I am one for the right of free speech but it is my opinion
that after the A.C.L.U. looked at ALL the data gathered on Mr.Whiten
that they possibly would distance themselves from such nonsense.
remember intentional interference is NOT a right to free speech.
the alligations against WB2OTK are substanual and unfortunately
he is the cause of his own demise.

Jeff, that's a BIG stretch ... what about the JA hams who have
HF access with no code? Not to mention the fact that, even in
third world countries, the hams for the most part have modern
store-bought appliances, just like most US hams.

In fact, in my personal experiences, the third world hams were
more open to adopting new technology than most US hams.

> Whether one chooses to
> use it or not does not matter; if the need arises he has it available to
> him (maybe at a slower speed than when he was first licensed!). The phone
> modes won't work as an international mode due to differences in languages,
> but there are sufficient code pro-signs so that a meaningful QSO can
> extend across language barriers.

Your defininition of "meaningful QSO" falls FAR short of mine.
I don't consider the "cookie-cutter" type of "QSO" one can
conduct when limited strictly to the use of Q-signals to be
very meaningful.

Besides, those same Q-signals could be used on SSB using
ICAO phonetics ... or on the digital modes. There is nothing
which limits their use to CW.

The whole argument that "Morse is an international language"
falls apart on several counts:
1) it's not a language, just a means of encoding the alphabet
2) there are different alphabets used around the world (Russians
have a special version of the code for their characters)
3) if two people don't share a common natural language, they

will be limited to trivial exchanges of information

> A digital mode could become the
> international standard, but until such time that every ham worldwide is so
> equipped and/or has the ability to build and self-maintain such
> equipment, CW will remain the common mode.

I see no reason why every ham world-wide MUST have a common mode
with all others.

There will always be enough folks who choose to learn and use
Morse to permit someone who only has Morse capability to find
a "QSO" ... though again, my personal experience is that hams
in even third world countries have modern stations capable of
far more than just Morse.

> The ITU has this global view
> while many individuals have only an insular nearsightedness - their own
> personal goals out-weigh those of the global amateur community.

Jeff, you can't presume to speak for the ITU ... all you can do
is quote from hold-over regulations from ancient times. There
is a significant global movement to eliminate those ancient
regulations and it will happen at a WRC in the not-to-distant
future.

Dave,

Some of it is outlined in some of the articles on the NCI web site at

http://www.nocode.org

including the ARRL's role in prompting the FCC to increase the speed
from 10 wpm to 13 wpm (circa 1936) for the sole purpose of artificially
limiting the number of hams ... because there were approximately 36,000
hams at that time and "the bands were approaching saturation, with
conditions at times intolerable."

There is a .pdf file (rather large) on the FCC's web site. I believe
that it's under the OET (Office of Engineering and Technology) sub-pages.

Sorry I don't have a specific URL right now, but I know it's there.

1398. Family Radios In Israel and Egypt?

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-18 00:00:00 UTC
From: miles@mail.utexas.edu
Message-ID: <miles-1804990858120001@128.83.41.1>
Source record: 145459
Cross-posted to: alt.radio.family,rec.radio.amateur.misc,rec.radio.cb

"Family Radios" are small walkie-talkies that can be used in the United States for communications between family members. They do not require a license, are available at discount stores, and have a range up to 2 miles (3 km) or so.

Does anyone know if these radios can be taken by vacationers into Israel and Egypt? If they cannot be used in one of these nations, can they at least be taken through it without trouble in Customs, to use in the other nation?

Thank you!

Dave (et al),

In an front page article in the April 1999 issue of the IEEE
publication "The Institute," a senior U.S. Coast Guard official
stated that Morse code was abandoned by the maritime services
because it was "insufficient" as a means of emergency
communications and that many lives might have been saved had
more modern means been adopted earlier.

The releveant portion of the article (the remainder went into
the history of Morse and Vail and some of the controversy over
who actually invented the code) is viewable, with some editorial
comment at:

http://www.nocode.org

under the "Articles" button.

With all due respect, this rather dubious "statistic" keeps
getting bandied about, but nobody ever provides a reference
to a scientifically valid study which supports the contention.

- From listening to the bands, I have to agree that there is
a considerable amount of activity, but I really don't believe
that it amounts to anything NEAR 50% of all QSOs.

Well, I just e-mailed the article to Riley at FCC.

And I intend to e-mail to Riley every other article or site of this nature.
Don't like for me to do that? Then you have two choices: (1) don't post
your illegal activities, or, (2) stick it up your ass.

1411. info and/or parts on a Gap Eagle vertical antenna

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-18 00:00:00 UTC
From: Ed/N3WJA <n3wja@arrl.net>
Message-ID: <qF4S2.1035$BA4.7868682@news-read1.qis.net>
Source record: 145570

I just purchased a used Gap Eagle for use at my trailer in Virginia during the season. I have a small problem maybe someone can help me out with. I have all the standoffs necessary for the mid tuner rods(6-6 1/2" and two 5 3/8") and the lower tuner rods(4 - 2"). I have one 2" standoff left over for what I imagine is the upper tuner rod (65"). Does anyone know if the upper tuner rod takes 2" standoffs? I am missing the 65" upper tuner rod and the standoffs. Also missing the dust cap for the top, end caps for the counterpoise rods. Anyone have a damaged Eagle they might want to sell some parts off of? Thanks for any help. Ed/N3WJA

I have an old MM-3 and I love it. It would be too hard to part with it now after using it for so long. Good luck with the search, though. If you find one, you can get a eprom upgrade to the lateset AEA had before they closed down. Call the guys at Timewave and talk to them about the eprom. They offered to burn me one a couple of months ago for my unit.

Actually, I've had quite a bit of luck using solder and an old 240 W
soldering gun. Just be careful not to overheat the cell as you solder.

From: hmnadel@banet.net
Message-ID: <371BD8A1.4AD65A7C@banet.net>
Source record: 145276

LIMARC TO MEET LETTERMAN ON "LATE NIGHT"

What will happen is anyone's guess as the leaders of the famous "LIMARC Morning Show" come face-to-face with their "Late Night" rival David Letterman. Those in the know on Long Island greet the sunrise around 6:30 every morning to listen to their favorite "RB" or "Rotation Boss" decide the topic and spin of the day on the Long Island Mobile Amateur Radio Club's 146.85 repeater.
These hardy individuals, some of the most respected members of LIMARC, wake up early each day to take on these awesome responsibilities. But lately, there has been a problem. Some of the members have been watching "Late Night with David Letterman" late into the evening (morning?!) and have not been able to get up in time to participate in the "Morning Show", thereby decreasing the number of participants.
Despite this rivalry, many members, directors and officers of the LIMARC have accepted an invitation by the producers of the "Late Night with David Letterman" show to a showdown... Monday afternoon, April 26, at the Ed Sullivan Theater in Manhattan.
The "Late Night" producers, unaware of the "Morning Show" situation, found LIMARC through its web page and thought they would make a "fun filled" addition to their audience.
It is sure to be a show the Letterman producers and LIMARC members will never forget! Stay tuned for "late" developments...

Help!

Following years of faithful service, the outer shield leaves
inside the BNC on my 2M Hotrod antenna fell/broke off.

I disassembled the antenna and found the BNC to be a
fairly normal female unit. The problem is I have been
unable to find a replacement with the same backside bore
where the custom Hotrod dielectric screws in.

Anybody have any ideas where to find a replacement
female BNC with the proper bore??

Thanks

Leith Johnson N0VMF

>73, Jeff KH6O

Well there are only 30,000+ newsgroups on this server, so no I haven't checked a half million. Yes I'm sure there are other groups who identify themselves. Yes, I guessed at that figure. Would you agree that the vast majority of Usenet *don't* identify? Well it's not important, and I won't use it as an argument for anonymous posting. The simple fact is if you don't like it then just ignore me. If it makes you feel better then go ahead and use the usual insults: lack of testicles, no pride, gutless crank caller, and so on. It won't hurt my feelings because I'm really not Jones anyway...

I've found it helpful to abrade the surfaces of battery tabs with a
Dremel tool, using the edge of a cutting wheel or the flat of a scribing
bit. That way, you can solder to things that otherwise won't take
solder at all. Use a very hot iron or gun and work quickly -- you don't
want to soak a lot of heat into a battery. Probably not a good idea to
do this with the older, explosion-prone lithium cells. 8-O

There is a chain of stores, called "Batteries Plus" around the country.
They might be able to do it for you, since they can rebuild nicad
battery packs in the stores.
There are several stores in Denver, Colorado Springs and Fort Collins
Colorado. They are a nationwide chain, so if you can't find one,
call one of the stores here and ask them where the nearest ont is to you.

Jeff, you've said this before. Could you verify if they are limited to 27 MHz, or are they on the ham bands? If they're restricted to the citizens band, then your comment is valid. If they are on the ham bands, then your comment should be modified. Is their no-code HF license as restrictive as our coded Novice?

>requires.

Alas, what you have is an EGA monitor. It will not do analog video.
It expects TTL drives. If it were VGA, you'd have a fighting chance
since the analog gun drivers would exist in the monitor (and some
VGA monitors will even accept a composite signal, the Mitsubishi
Diamond Scan does). But EGA monitors don't have any of that.

You could build a color demodulator to separate out the composite
signal into RGB, then build gun drivers to take that and drive the CRT.
But you'd also need to strip out horizontal and vertical sync signals,
convert them to TTL, and apply them to the deflection circuits of
the monitor too. If perchance it is a multisync model (like some NEC
models), you might be Ok. If it isn't, you'll also have to alter the sweep
circuits to handle TV sync and interlace. Basically, you get to build
everything that's in a TV monitor except the HV section.

Sorry the news isn't better. If it were an old CGA monitor, the sweeps
would be compatible, and you'd have an easier time converting it. But
the EGA is neither fish nor fowl, so you're basically screwed.

Can't you read? It says "This is not about some bootlegging scofflaw in a SE
Asia rain-forest;".
In any case, the Swatch company may not be as guilty as they first appear.
They may have been truly conned and misinformed by unscrupulous parties. If
they really knew how big their audience was going to be, do you think they
would have bothered?

Glad ya spoke your mind! One of the benefits of "having" to be inducted into "operating" using Morse was that it taught us.....to.....OPERATE. Whether you like it or not.....and the results of the new no-code operators are painfully obvious (spreading to the general population)...is that radio amateurs are becoming less amateur radio operators. Heck, even the ones who DO learn morse and try to use it after the fact....have a rough time...trying to put a hundred BK's and other plain language in between everything they say.....not catching on to a much simpler "handed-down" procedure for basic operating. The gov'ts sure dumped us into this one eh!

Monthly Morse QTCs as Audio Files
==========

Starting with QTC No 10 e.g. the one of Sunday, March 20, 1999, the
Deutscher Telegrafie Club announces that its regular monthly QTCs are
available in audio format (MIDI-type) at our web site
http://www.muenster.org/dtc/eindex.html in three different speeds: 12 WPM,
20 WPM and 30 WPM. As unfortunately not all browsers can handle these files
online, we did take care of that and offer these files as a ZIP archive for
individual downloads as well.

We do welcome any comments about this new feature in our guest book !

GM DR OPs = NW QTC NO 11 WID 4 PTS =

pt 1 =
PLC E.G. FAST DIGITAL DATA DISTRIBUTION USING POWER LINES ENDANGERS HF
RECEPTION IN DL = WE ARE ACTIVELY ENGAGED TO PERVENT THIS =

pt 2 =
WHILE NOT AGAINST PLC AS SUCH WE CRITISIZE MISSING CONSIDERATIONS TO AVOID
HARMFUL QRM TO RADIO SERVICES =

pt 3 =

Why "should" the error of the first meter at 10mA be 18% or at 20mA
ought the error be 8%, etc.

I think you have totally missed Roy's point. A specification is a
promise of accuracy and not a promise of inaccuracy. If you're
measurements are correct then the observed fact that the meter is
more accurate than the specification at less than FSD is simply proof
that the meter is within its specification and not any sort of proof
that the specification is somehow wrong.

1445. Re: Operating QRP in national parks

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-19 00:00:00 UTC
From: M Johnson <silversq@ix.netcom.com>
Message-ID: <371B5DEC.9B3BCB28@ix.netcom.com>
Source record: 145353

Hi Shawn,

I have operated mobile from Yellowstone several times but never portable on the trails. The park service is very picky about what can be done in the park just because of the number of people that go there every year. Most of the areas, including the back country trails, are very regulated. I would suggest that you call or e-mail the Yellowstone park headquarters and explain just what you want to do and see what they say. Besides you need to get your reservations in early if you are going to camp.

They may have some problems with someone stringing a HF antenna in the trees.

[...]

I understand your points, but I would prefer to see the Commission doing its traffic-cop job of putting malicious jammers off the air, while at the same time remaining true to the act which created the FCC, the relevant part of which is archived at:

http://www4.law.cornell.edu/uscode/unframed/47/326.html

and which states

"Sec. 326. Censorship

"Nothing in this chapter shall be understood or construed to give the Commission the power of censorship over the radio communications or signals transmitted by any radio station, and no regulation or condition shall be promulgated or fixed by the Commission which shall interfere with the right of free speech by means of radio communication."

The practical application of all this is quite clear to me: Express any view on any subject whatever, without obscenity or indecency, but _never_ transmit noises or comments on a frequency which is in use unless you have asked for and received permission to join the conversation.

Of course, I would very much prefer it if all amateur contacts were conducted in a gentlemanly manner, even when subjects of great controversy are being debated, and I would support regulations which would -- if such a thing is possible -- minimize the number of boors and thugs and morons in the amateur ranks; but we have to live in the real world with operators as they exist now.

So I salute the efforts of Mr. Hollingsworth to cleanse the service of those who feel it is their "right" to transmit on top of conversations or individuals which they find personally or philosophically offensive.

I would suggest to him that one or two weeks of steady monitoring of 3950 kHz, every evening from seven to midnight Gettysburg time, would prove beyond any peradventure of doubt exactly who are the jammers (K5BLB, K5MVK, W9ART, WA9KJI, K5BLB, K5ZU, et al.) and who are the victims of jamming (the Liberty Net folks, who've been peacefully holding their net Saturdays and informal chats on other days there for decades).

Onward, with all possible speed!

With all good wishes,

Kevin, WB4AIO.

I plan to eventually, but I probably won't get very far--I can go either
40 or 50 feet, or about 10 (depending upon which side of the house I
hang either my inverted V or sloper). Just haven't had the time to do
it yet, and I haven't been active on 40 either to provide the
incentitive.

> waltz right on in).
>
Interesting. I don't remember now, but I think my 2m multimode wasn't
affected--it has some sort of helical filter in it. The HT was what I
noticed the RFI on.

I haven't made a 10x or 100x probe yet for the spectrum analyzer here at
school; I think you gave the specs on it earlier. It was 470 ohms for
10x; 4700 ohms for 100x right? I noticed that when I tried to use an
oscilliscope to watch the output waveform of various transmitters, I get
what I think is a ghost image--another waveform with just slightly less
amplitude. I think it might be just the probe picking up noise in the
air, so I want to try to actually measure harmonic strength with the
spectrum anaylzer.

Thanks for the info; I'll try some of the suggestions in the near
future, when school isn't so pressing!

>Hmm.. There such a book? ;)

The problem is that you are reading a handbook --not a tutorial. You
have to know something about how the stuff works before you read this
book.

>I've been reading my non-dummy book, but wind up 'glossing over' about 50%
>of it.
>Such as the chapter on modulation.. I now somewhat understand what RF, AF,
>SSB, etc. etc is.. but the book assumes the reader to be a bit more educated
>in such than I am, "fur-shur..."

And the opposite complaint is also a frequent thing: namely, that the
book is too dumbed down to really tell you anything useful. The ARRL
has to find a happy medium somewhere between the IEEE technical papers
and a Dummies book. The handbook is the result. No, it's not ideal
for much of anything. But often it's enough to get you started.

The handbook was never meant to be read from cover to cover, or even
chapter by chapter. It was meant to be a reference on the state of
the art.

If you're studying for a better license, I suggest a license manual.
If you're looking to understand filters and amplifier design, try "RF
Design" by Chris Boswick (I hope I spelled his name correctly).

If you're looking to understand transistor biasing, many folks swear
by The Art of Electronics by Horowitz. I also like textbooks such as
Electronics by Malvino.

It's worth noting that you won't get far in any of this if your
understanding of mathematics is poor. I wish they made better books
on that subject, but they don't. I guess that's what engineering
degrees are good for...

From: Trevor Holyoak <trevor@holyoak.com>
Message-ID: <371B8954.F08B50FB@holyoak.com>
Source record: 145361

I am interested in getting a pair of transceiver radios for use by my family in emergency situations, as well as for fun. I would like to get a ham radio HT someday, but right now the kind I want (dual or triband) is beyond my budget. In the $100 range, that leaves CB or FRS. My needs seem to more closely match the purposes of FRS, but I am concerned about the range (2 miles or less). Would a CB be better for longer range use (what is the range for a 4 W handheld CB, anyway?), or should I hold out for a ham radio (I plan to get one someday, but figure I might as well wait to get one that's got everything I'd like...)?

Thanks,
Trevor

Thanks, all. While the FCC chart is not exactly what I wanted (I was
looking for something with a little more science emphasis), still it's a
wonderful resource and I've already sent off an order for a copy. They're
only $5.50 each, which is quite a bargain in my mind.

Radar,Photo Radar and vascar all work pretty good. In calofirnia the CHP does show up for court...with papers.

The real trick is to get your court date moved to an officers day off or during vacation time. All that info is on CA. tickets. Nobody wants to pay overtime...or call an officer back from vacation.

And yes....THE CHP may now use radar on intersrate highways provided that the county where the units will be used are purchased by the countys/cities.

> ought the error be 8%, etc.

If the accuracy is "allowed" to be 3%, then officially it is "allowed" to be 3% of full scale anywhere on the scale.

Example: A 0 to 100 meter is rated at 3% of full scale. This means that at 100 it "can be" 97 to 103, which is 3% of full scale. But that also means that at 20 it "can be" between 17 and 23, which is not 3% but 15%. Or at 10 it "can be" between 7 and 13, which is 30%.

Any worthwhile 3% panel meter that I have ever worked with is a lot better than that.

If a meter *just barely* meets that spec and is no better than that, then as I said, at lower readings the errors "should be" the larger numbers. That statement was correct. The cheaper junk meters do exactly that and no more, so that the meter is not very good except close to full scale.

If you read my writeup more carefully, I am saying that meters in practice are not built that way, and the data that I gave for two old knocked-around meters is a very good example.

> I think you have totally missed Roy's point.

I think you are totally missing my point. The specification is standard practice, but a meter that does nothing more than meet the bare minimum advertised definition of "full scale accuracy" is not one that I would buy if I can find something that goes the extra mile and tries to get a better "average % accuracy" over "most" of the scale. And you may be sure that I can in fact do just that. Read my post again (the part that you deleted from your reply).

The "% of full scale" spec is a tradition, and anyone just barely meeting the spec will not go to jail, but he will not compete with those who do a much better design and test job for the same sell price. I'm not talking about $1000 laboratory things in walnut cases, just ordinary $80 taut band panel meters.

These days an automated test station could take data points (using a computerized optical reader), calculate a linear regression and the standard deviations, min and max errors etc. and possibly tweak the meter mechanism (or reject it) in just 15 seconds. The old traditional "% of full scale" spec is a lousy way to do business since it permits a lousy result.

Here's a new service I'm trying out on my website:

If you have recently passed your amateur exam and are waiting for your calls, visit this page and enter your name and state. Each night my computer will check the FCC daily activity and if your name is in the list, it will automatically send you an e-mail with your new callsign!

This is brand new and mostly untested, so let me know how it works and how you like the idea!

I am going to add a non-web way to register (like via e-mail) so users without web access (like Juno) can use it.

The URL is: http://davisfamily.nu/hamcalls.htm

We get it okay, Bill. Whenever you get backed into a corner, you throw the "inexperience" spear. Frankly, I think you're stretching the point pretty thin. Can I throw the "You're usually more on target than this" spear?

>Coded Novice? That would be a more valid comparison.

Their 4th Class restricted radiotelephone ham license limits them to
10w or less to the antenna on amateur frequencies between 21 and 28 MHz,
and below 8 MHz, and to 20W or less to the antenna on frequencies above
30 MHz. (I was originally told that no intercommunication with hams
outside of JA-land was permitted, but I'm having trouble documenting
that.)

> Thanx, Zekers!

You sure did reply to the correct group.I suggest getting an amateur
radio license and buying some 2-meter(146MHZ) equipment.
The range is a function of not only power output but also frequency
and efective radiated power.
With 2-meter ham your range will be greater and you have the option of
working thru a repeater system that other people paid for.From here in
Billings Montana I can be walking around with a $80-$200 handheld and
using repeaters get all the way to Seattle Washington 900 miles away on
less than 1/4 watt in many cases.Also many repeaters have Phone-patch
capability,after you punch in a code and get a dial tone you can dial a
phone number using the keypad on your mike,and the call is FREE! Tracy

> that laws don't mean much to people who just don't care
> whether or not they abide by them.

You are absolutely correct. It is called the Sullivan Law...BUT any criminal can bring guns in from other states and sell them illeagally to other New York criminals. I know that talking about gun control to Americans, who have traditionally owned guns and who live in rural areas where they may need them for hunting or for protection against wild bears has always brought on great controversy...BUT unless there is a total national ban on concealed weapons we can not stop criminals from getting guns and cut down gun related killing and wounding in our cities. The fact is that England has greater gun control which results in proportunately less use of guns to commit crimes there. I know there are already many guns in circulation BUT I would start by prohibiting manufactures from making hand guns, except when they are ordered by law enforcers (police)..The results might not take affect until many years from now BUT eventually I am sure this would do some good. Anyway I don't think that gun control is directly relevent to Ham Radio Policy so it does not belong here. Please excuse my opinions on gun control because I, as a former city and present suburban habitant may not completely understand why country folk think that they all need to shoot guns and teach their minor children to shoot guns. Heck..I made marksman in the US Army and nobody in my entire family ever owned any guns. Guns are just boring tools that make holes at a distance. Enuf sed.

The truth is found in the public hospitals in large cities.
There you can often find many wounded Blacks who have been shot
by other Blacks or by Whites. Responsible honorable Blacks
want to limit the shooting because often Blacks are the victims
either because they are criminals or because they just happen to
be in the line of fire and are quite innocent.

> Makes it look like those
> folks are going to carry their guns illegally and they and
> their kin voted to make sure that lawabiding persons remain

> us a very compelling story?

I'm law abiding but I don't feel the need to carry a gun and
I didn't even when I lived in NYC because I would rather get robbed
than kill a desperate criminal. That's me.

> Sure glad I don't have to live in one of our cities,
> either. Gun control or not. We've had a state prohibition
> against carrying concealed weapons since 1876, the days of
> Jesse James and his gang. Doesn't seem to have helped much.
> Better that the crooks think that every prospective victim
> is a potential killer, too, whether he/she is or not. Which
> is exactly what the minorities voted AGAINST.

Many people who carry guns are paranoids IMHO. I know a
really big guy who had a beautiful wife. He always carried a
gun because he feared that someone would try to rape his wife.
When he couldn't carry a gun he carried a baseball bat. He
told me that he slept with a gun under his pillow and a baseball
bat under his bed. I think that he lived in a fantacy land and
hoped that someone would make a pass at his wife so that he
could relive some dream he had about killing somebody.
As an engineer and a Ham I recognize that we all live in a
world where there are certain risks. We have to take risks when
we drive an automobile, or fly in an airplane, or go out in a
thunder storm. We have to be realistic and think of the odds..
and make up our minds what risks we must take to live normal lives.
Now I won't ride a motorcycle because I witnessed some people get killed
in motorcycle accidents. One of my cousin's sons was killed in a
motorcycle accident, etc. Wearing a helmet did not prevent the son
of a local Ham from having his neck broken and dying. BUT...

I think that there are far more "accidents" involving guns than there are cases where people were able to protect lives and/or properties by the use of guns. I am convinced that the stats say that the risks are actually less for non-gun owners. For me the risk of owning guns outweighs the risk of needing guns. Some folks are afraid to identify and even more afraid to admit it if they don't own guns... not me...If someone wants to take the risk of robbing me...he or she had better think twice...because I won't tell anybody about my secret security systems and weapons!!!

And you still do not understand what I am trying to tell you.

One more (and last) time. I am really sick and tired of this.

I am saying that a meter that just barely meets the full scale % (aka the Roy meter) is "allowed" to be a very poor meter %-wise at below full scale. The meter that I will buy is the one that is 3% of full scale, but designed so that the degradation of % accuracy is smaller than what the Roy meter tolerates. I *know* that I can buy such a 3% meter for the same price. In other words the % error across the scale is the thing that anyone in his right mind is going to shop for and compare.

"How well does the meter track across the scale?" This is the most sensible question that I can think of. When I evaluate a meter it is the FIRST thing that I look for. And if I compare brands X,Y and Z 3%-rated $80 meters, guess which one I will buy.

This preoccupation with the literal interpretation of "% of f.s." that is used in catalogs is not necessary. I think it is a lousy way to do business and vendors do it to make life simpler and less litigious for themselves (who can blame them?). But they can, and do, perform better than that, they just don't commit to it.

If you understand this simple message then you understand my point exactly. I have no interest whatsoever in the strictly legal "Roy meter". A meter that is off by +/- 3 units at a reading of 10% of f.s., or even +/- 3 units at 20% of f.s., is not desirable. I will not buy it and I do not have to. Instead of haggling about numbers to 4 decimal places, let's use some common sense.

The message is clear and simple. Why is there so much trouble with it?

I do not want to argue about this any more. If you nice (and one or two not so nice) folks out there think that I am "mind set", then so be it. I will believe

what I think makes sense and let it go at that.

> between the slugs

At this point in time the discussion is centered on the actual 0 to 30 uA DC meter itself and not on the Bird wattmeter. The meter itself has interesting problems of its own.

The Bird 43 is rated at 5% of full scale. The meter itself is probably a 2% meter. The other 3% includes the element and the built-in coaxial assembly. The 43 construction is "precision" as nearly as I can tell by looking.

As for the elements, my *new* 250H and 1000H for the 2-30 MHz range are *very good* (within a couple of tenths of a dB) in my *new* 43.

Source record: 145230

Hello all,

This is to let you know about a free new service I have decided to try, called Logs Online. Basically, it lets you create an online log, then place a form on your website so visitors can search the log to see if they're in it. You don't have to reveal the entire log to visitors in order to make the search work. If you ever tried the logs for VK0IR, it is very much the same concept. You can also add comments in the log for any or all of your contacts.

There is no charge, and it should be fairly easy to create your log. I am just trying it out at this point (the site went online this afternoon) and I am eager to hear suggestions or comments. You can visit the site at

http://www.logsonline.com

I am still trying to work out a few glitches with DNS, so please be patient if the site temporarily disappears over the next few days. It will be back.

And there are many many many amateur operators that operate home-built gear, and there are many many many that operate older tube ("boat-anchor") gear; I happen to fall into all three catagories.

If a code-free HF (U.S.) ticket is ever created, I wouldn't mind so much if those operators were restricted to 10W with no 30, 17, and 20M privileges just as the JA Class 4 licensees. Would you? Would they?

I have an RCI-2970 with a problem
.
When the radio is unplugged from the power source and sits on the shelf for about one month, the memory battery goes flat. Then when you go into the memory circuit, it keys and you have to shut the rig off to get it to reset. This does not happen if the battery is good. Any ideas why the battery dies so soon?

Thanks de

Jason

A word of caution concerning your grounding arrangement. Using separate grounds can cause problems, if a lightning strike hits near you it will make one of the grounds possibly thousands of volts higher than that of the other ground. Whatever you have between the two grounds at that point will surely fry. Obtain a good book on proper grounding and follow it's advice. Good luck and I do hope you get your interference problem licked.

I tried to address that a while back. The Bird 43 is a field
instrument, not a lab instrument. It must work over a very large
tempature range. Not only is the meter movement in questiion, but
also the components in the slug and mechanical accuracy of the
sampling line secment. You always have to allow for the worst case,
which migh only show up as 1 in 1000 while the others are much
closer, especially under more controlled enviroments.

Dr. Karl Ferdinand Braun

1850 - 1918

The German physicist Karl Ferdinand Braun, b. June 6, 1850, d. Apr. 20, 1918, shared the 1909 Nobel Prize for physics with Guglielmo Marconi for his work in developing the radio.

Braun, who spent his career as a professor of physics at German universities, increased the range of Marconi's transmitter, invented the crystal rectifier (a device that allows current to flow in only one direction, and improves radio transmission), and later invented the oscilloscope, a cathode-ray-tube laboratory device that was the forerunner of today's television and radar tubes.

Source: The New Grolier Multimedia Encyclopedia

Although German physicist Braun's main contributions were in pure science, he is best known for developing the first cathode-ray (the 'Braun tube') oscilloscope in 1897. This device produced line graphs of rapidly varying electrical signals and was the ancestor of today's television screen.

In 1909 Karl Braun was awarded the Nobel Prize, along with his colaureate, Guglielmo Marconi, for "contributions to the development of wireless telegraphy."

Source: Samsung - Salute the Inventors

Karl Ferdinand Braun, the german physicist, shared the Nobel Prize for Physics in 1909 with Guglielmo Marconi for the development of wireless telegraphy.

Braun received his Ph.D. from the University of Berlin in 1872. After appointments at WŸrzburg, Leipzig, Marburg, Karlsruhe, and T Yuml;bingen, he became director of the Physical Institute and professor of physics at the University of Strasbourg in 1895.

Braun was recognized by the Nobel committee for his improvement of Marconi's transmitting system. In early wireless transmission, the antenna was directly in the power circuit and broadcasting was limited to a range of about 15 kilometres. Braun solved this problem by producing a sparkless antenna circuit (patented in 1899) that linked transmitter power to the antenna circuit inductively.

This invention greatly increased the broadcasting range of a transmitter and has been applied to radar, radio, and television. Braun's discovery of crystalline materials that act as rectifiers, allowing current to flow in one direction only, led to the development of crystal radio receivers.

Braun is also known as the developer of the cathode-ray oscilloscope. He demonstrated the first oscilloscope (Braun tube) in 1897, after work on high-frequency alternating currents. Cathode-ray tubes had previously been characterized by uncontrolled rays; Braun succeeded in producing a narrow stream of electrons, guided by means of alternating voltage, that could trace patterns on a fluorescent screen. This invention, the forerunner of the television tube and radarscope, also became an important laboratory research instrument.

Braun traveled to New York City in 1915 to testify in a radio-related patent case. He was detained there because of his German citizenship when the U.S. entered World War I in 1917; he died before the war ended.

Source: Britannica On Line

Electronic television used a cathode-ray tube to produce a better picture. The cathode-ray tube was invented in 1897 by the German scientist Karl Braun. It used electrons. These are the very tiny particles that circle around the center of an atom. When they break away from the atom, they form a flow of electrons that we call electric current.

Braun has discovered that a stream of electrons would make a screen coated with fluorescent material glow with light. This stream of electrons, called a cathode ray, could be focused to a point at the end of the tube. In other words, it could be used to reproduce the points of light and dark in a picture of a person or an object, such as those in a photograph.

I just bought a Yaesu FT100 from AES.
First impression of the radio was good. Works great on HF (40M and 75M
)
I entered some local repeater frequencies and scanned for awhile. When
the radio stopped on a couple of repeaters, I noticed that the signal
strength was less than half of what I had gotten on other radios hooked
up to the same antenna (Comet dual band ground plane @ 70" on top of
tower).
Repeaters that normally were full scale are now S-9 on the FT100. I
looked all through the menu to see if I had some attenuation on but
there is no way to attenuate the receiver on 2M. I also read all through
the manual, but did not find anything on changing the sensitivity of the
receiver on VHF. The receiver on VHF and UHF is very dead. My wife was
about 200 yards down the street in her mobile (50 Watts) and I was
only getting 40 over S-9, the signal should have been FULL SCALE and
then some.

Has anyone else experienced this problem wit the FT100's receiver ?
I plan on calling Yaesu tomorrow about the dead receive on the radio.

Thanks in advance,

Jim N5JIM

> around the operating frequency. The only visible indication was a
> certain sluggishness in the meter readings during keying. I probably
> never would have noticed it on SSB. (See, folks, CW does have it uses!
But did it take an OO notice to become aware of this? If that happened,
the first person I talked to would let me know. No need for an OO. I
would have started checking when I noticed the funky meter readings.

> Good! But if you did get an OO notice, wouldn't you at least check your
> signal?
of course, but I check my signal every day. I'll find any problems way
before a OO would have to get involved. Actually, my signal is checked
every time I get on the radio. I've got scopes too if I get curious. If
I have a problem , I have no shortage of people who will be glad to let
me know I have a problem. But if I got a OO notice that just stated I
was "wide", I'd probably wouldn't give it too much thought unless he
explained how he came to that conclusion. The person I was refering to
had no problems with his rig. MK

Hey; I completely agree with Marty and Rich here. I heard the "racist" comments. They were taken out of context and refered to low life individuals not any certain race.

I monitor 75meters nightly while on the job.

Ive not heard racism from OTK. A bit abrasive yes.
Poke fun at the south and hillbillys yes. Rascist
no.

The OO can be used just like orchestrated complaints to the fcc.There needs to be an element of proof.

To me hearing a jammer ,jamming with an open mike while talking to un unlicesed operator on the phone is sufficent for me to believe I know where it was coming from.But I dont know what standards of proof the less kid and less gentle FCC will have.

OK I'll bite. True there is no such a word as IRREGARDLESS because regardless
if there was, it would have to mean "without being without regard" which would
mean WITH REGARD...regardless. I don't need the dictionaries for this one..It
is a very common error based on little regard for double negation.

> > >Irregardless, FCC is full of shit in your case. Had we been graced with a
>
> What the heck does irregardless mean, anyway?

I answered above.

What I really shouldn't bite on is the title of this thread BUT as you can
expect I will try to answer that question. I was going to stay away from this
foolish thread BUT "irregardless" got me in.

YES...There are Jewish racists...There are also Jewish anti-racists...There
are Jews who exploit Blacks and there are Jews who help Blacks. There are
also Jews who are Black. Many Blacks believe that ex-Mayor Kotch, who is a
Jew, did more to help them than the present Mayor who is of Italian decent
and ex-Mayor Dinkins who is Black [but visited Isreal to try to get Jews to
vote for him]. I don't live in New York City. I live about 45 miles away but
I used to live in New York City in multi-racial neighborhoods. I wouldn't
mind living in New York if there was stricter gun control. I'm not against
any race that is unarmed. Incidently if you want to talk about New York
City;..Blacks have not only taken over what was once was mainly Jewish
neighborhoods, they have taken over what once was mainly Italian
neighborhoods and what once was mainly Irish neighborhoods, and what once was
mainly German neighborhoods...and Puerto Ricans came and the Blacks took over
some of their neighborhoods and then the Puerto Ricans took some of their old
neighborhoods back from the Blacks. It is not all racial...IMHO a lot has to
do with economics. Even that it is a debatable subject because there are
still many Jews in New York City...Some are too poor to move...Others are
rich enough to have body guards. New York City is getting so multicultural
that the Chinese restaurants, where Jews used to get Wonton soup with
Kreplach like mother used to make, are now selling Wonton soul soup with
chitlins. You have to go to California to get real authentic Chinese soups.

I don't think that religion or race or nationality has anything to do with being Jewish. I could be a Jewish atheist or a Black Jew or a Greek Jew...If my mom was Jewish and I was circumsized I would still officially be Jewish. I hope you learned something from that....because being Jewish is not necessarily being religious or being a member of any special racial group (lots of Roman Caucasians have long noses and Arabs are Semites) or being an Israeli national...Being a Real Jew is being a part of the JEWISH CULTURE...It is not easily defined and often debated...Like being a REAL HAM.

Regards...not regardless.
PLEASE keep accurately defining,
Hams need more license classes,
I never met a Ham I didn't like of any race, creed, color or nationality,
Bob Wex w2ilp (Irregardless Logically Pollutes)
-- .- -..- .. --

Voice on the telephone: Are you Jewish?
Cohen: Not necessarily.
--Old Joke--

All Italians don't have noses like Jimmy Durante.
All Jews don't have noses like Barbra Striesand.
All Hams don't have antenna towers.
....BUT some do....regardless.

Jeff, I've made thousands of contacts with JA's from Guam, and am still
getting cards from Dec89 - Dec91. I'm sure many of them were the
"No-Coders." I hope that I was not invlved in illegal communications. Very
polite operators, none the less. There are many many many amateur operators
in the states that voluntarily restrict themselves to low power operation.
They would probably scoff that 10 (and 20 watts) are unnecessary QRO. It
looks to me like your comparison of the JA no-code HF license and our CB band
is not valid. Before you poohpooh the JA-NC-HF license as like our CB, you

might want to present all of the information and see if anyone else sees it that way. 73, Brian/N0iMD

Amen, Joe. None of the garbage heard on the phone portions of the bands ever occurs in the CW portions. Eliminating HF phone would solve all the current behavioral problems.

Hey, there's an interesting penalty the FCC could apply to the law-breakers: Remove their phone privileges for say, five years.

>look for. Radio Shack has similar FM radios but they are still at 1/2
>watt.

All of the FRS radios are a maximum of 1/2 watt, by law. Allow me to disagree with another poster who suggested obtaining an Amateur license. Everyone in the group would have to obtain an Amateur license, and that is not practical. One of the neat things about FRS is that you can use them for family outings, car-to-car as the scout troop goes to a camp-out, etc. Nobody has to be licensed. The trade-off, of course, is a limited range of 1 to 2 miles.

The CB radios will not give much more range, and you will suffer interference from more powerful stations. You and your group may be astounded at the language you hear and the interruptions to your conversations. The antennas are more awkward and the battery consumption is high.

Stay away from the marine radios unless you are involved in a boating situation. People involved in the safety of life and property at sea and on inland bodies of water (and this includes the Coast Guard Auxillary) take a dim view of non-boating interests using marine frequencies and disrupting the "band-plan".

That leaves two options which are similar. The FCC allows handheld radios on VHF and UHF for "business" purposes. There also is a band on UHF (called GMRS) for personal/family use. These radios cost from $150 to $250 each and give a two to five mile range. One also pays a fee of $75 for a five-year license.

A newsgroup exists to assist folks in making these kinds of decisions. It is called alt.radio.family. Although some of the participants are hams and/or CB operators, that is a coincidence. The real purpose is to compare "family" style radios for range, battery life, ease of use (skiing is a popular utilization), and accessories.

We invite you to drop by and tell the group more about your specific situation--buildings to get through, hiking/driving distances, etc. Just remember this old rule of radio: No matter how far it talks, it isn't QUITE far enough! People always want just a little more! (grin)

Best regards,
K5PF

Another approach I've resorted to is, if replacing tabbed batteries, to remove the tabs from the old cells and weld them onto the new ones. To do the welding I charged a low inductance 30,000 uF 25 VDC electrolytic, connected it to the tab and the battery case, and pressed the tab to the case. It welded firmly with a bang.

Of course, take the standard precautions, and all that. Good luck!

Gee Bob...I thoght that New York City had the strictest
gun control laws in the land. I guess that just goes to show
that laws don't mean much to people who just don't care
whether or not they abide by them.
I spent a bit o'time in the Big Apple while stationed at
Fort Monmouth, and I sailed from there on a troopship,
returned on another and was discharged at Fort Hamilton,
Brooklyn. Biggest scare I got there was once when I thought
a cop was gonna shoot the driver of the bus I was on, who
ignored his traffic hand signal...

Eariler this month the citizens of Missouri held a
statewide referendum to vote on whether or not to make
available to well screened citizens the opportunity to be
issued a permit by the county sheriff to carry a concealed
firearm. The vote passed overwhelmingly in over 100 of 110
counties but was defeated by large margins in StLouis and
Kansas City-where a large majority of voters are minorities
- where violant crime is most often encountered and where
criminals abound who use concealed firearms with no regard
to legalities. Where citizens would be most likely to,
rationally, feel the need to arm themselves against this
criminal element. Yet the law was rejected because of the
large negative minority city vote. Makes it look like those
folks are going to carry their guns illegally and they and
their kin voted to make sure that lawabiding persons remain
prohibited from defending themselves-against the very
"majority" who voted to keep it that way.. Doesn't that tell
us a very compelling story?

Sure glad I don't have to live in one of our cities,
either. Gun control or not. We've had a state prohibition
against carrying concealed weapons since 1876, the days of
Jesse James and his gang. Doesn't seem to have helped much.
Better that the crooks think that every prospective victim
is a potential killer, too, whether he/she is or not. Which
is exactly what the minorities voted AGAINST.

Saber 1 uhf 12ch
6D core, H/pwr, non secure
Model # H44SAN7139CN
comes w/ 1 batt.motorola used (not so good)
plus 1 brand-new batt motorola (7.2v @ 1800 ma)
& ant. the shape of the radio is in
good shape I'll give it a 7.

*** Note ****

Asking $240.+ you paid for S+H

**** Need to read radio for band spread ? ****
Don't know band spread!

I'm not going to paid someone $40 or $30 so i can read
the radio. If I'm not going to kept it.

Then i used my scanner to see what were the
CH. And this is what i found.

Ch. 1 447.285
Ch. 2 449.925
Ch. 3 460.000
Ch. 4 460.500
Ch. 5 449.125
Ch. 6 447.125
Ch. 7 --- Blank
Ch. 8 --- Blank
Ch. 9 --- Blank
Ch. 10 --- Blank
Ch. 11 --- Blank
Ch. 12 --- Blank

Save $40 or $30.

And this is why I'm selling it!
1) I got it with a trade!
2) It cost to much for me to keep this radio.
I would need a charger, software, cable,
rib box and get this a 386 computer. Ha

You can e-mail me

be 3% of
>full scale anywhere on the scale.

This is EXACTLY the statement I have been trying to convince Bill of all
along. Change the words in his previous posting and things make much more
sense. [But I still cannot duplicate his numbers exactly.]

>Look at the first meter. At 10 mA the error is 5% and according to the
"rule"
>it should be 18%, if it is a 3% meter. At 20 mA the error is 1.5% and it
>should be 8.0%. For the second meter at 25 mA the error is 4.2% and it
should
>be 8.0% if it is a 1% meter.

The accuracy statement supplied by the manufacturer does not tell you what
the error is at any point. It just sets bounds on the error. A corrected
wording _might_ be:

At 10 mA the actual error is 5%, and according to the manufacturers
accuracy statement, it could be as high as 15%, if it is a 3% of full-scale
meter. At 20 mA the actual error is 1.5% but it could be as high as 7.5%.
For the second mneter at 25 mA, the error is 4.2% but it could be as high
as 8%
based only on the full scale accuracy of 1%.

>Example: A 0 to 100 meter is rated at 3% of full scale. This means that at
100 it
>"can be" 97 to 103, which is 3% of full scale. But that also means that at
20 it
>"can be" between 17 and 23, which is not 3% but 15%. Or at 10 it "can be"
between
>7 and 13, which is 30%.

Which is the point Roy Lewallen made.

>Any worthwhile 3% panel meter that I have ever worked with is a lot better
than
>that.
>
>If a meter *just barely* meets that spec and is no better than that, then
as I
>said, at lower readings the errors "should be" the larger numbers. That
statement
>was correct. The cheaper junk meters do exactly that and no more, so that
the meter
>is not very good except close to full scale.

No, at lower readings the errors do not _have_ to be larger numbers. But
they _CAN_ be and still meet the full scale specification.

>If you read my writeup more carefully, I am saying that meters in practice
are not
>built that way, and the data that I gave for two old knocked-around meters
is a
>very good example.

>and max errors etc. and possibly tweak the meter mechanism (or reject it) in just
>15 seconds. The old traditional "% of full scale" spec is a lousy way to do
>business since it permits a lousy result.

Which was my contention all along...

>Bill W0IYH

There is a small enough amount of data here that it can be done by hand. Taking the first meter, for example, we can either fit the best straight line though the data points, or if we assume the meter was properly zeroed first, we can force our calibration to go through zero. Doing the latter gives:

Predicted_Value = 0.97213 * (Meter_Reading)

Without forcing the calibration to go through zero gives:

Predicted_Value = 0.98537 * (Meter_Reading) + 0.47205

If you look at the errors between these predicted values and the actual values, you will still find the worst error at the 5 mA reading. On the 10, 20, 30, 40 and 50 mA points on the scale, the above equations come to within 2.5% - an excellent meter. But you cannot read into this data that which is not there. Is the meter nonlinear below 10 mA, or is the 5 mA point just a bad reading? You can say only with further testing, not with this data.

But again, with only the 3% of full scale statement to work with, you would never know this. Bill said he had his meter checked against a calibrated Boonton RF voltmeter. So he can say with certainty that his meter is good over the range he checked. Another meter may not be nearly as accurate as his, yet it still meet Bird's 5% of full scale accuracy.

Pretty unlikely with a modern radio. Flattopping, etc, maybe, but I doubt wide. The filters shouldn't let this happen. Like trying to pour 40 gallons a minute from a 2 liter coke bottle opening. In my case, I'm ultra carefull, I run mild audio and load my amps to the gills for linearity. My Icom is incapable of overdrive/splatter as it doesn't put out enough to overdrive my amp. The 830 I have to watch a bit more. It can't really overdrive with it either, but it gets close. Again, my audio is mild so no real problem. My amp is always loaded for max output , so linearity no problem even on a strong voice peak. Also my amp is on stiff 240 and has quite a stiff power supply so has the headroom to run clean on heavy peaks. The max grid drive specified by henry for my amp is 270 mils. I'm usually more like 200-220. 270 is a bit too much I think. At that level you are nearly saturating the pair of 3-500z's. Usually if I were to have a problem, I'll know it before the OO has a chance to hear it. But, hummmm, I've never had problems like that. And have never had a OO notice. I'm mister clean. I hate a nasty overdriven signal. :) MK.

Special Amateur Good-Bye Traffic As SVA Athens, Greek Coastal
Station, Discontiues Regular Morse Service

As SVA, the coastal radio station of Athens, Greece, terminates its
regular service in Morse code, a special Good-Bye activity is being
held on that occasion every weekend of April.
The Greek administration issued the special call SZ1SVA for that kind
of traffic by SVA.
As in most countries amateurs are restricted to traffic with amateurs
only, we - after having received an advice by the German
administration - strongly recommend that amateur should address the
coastal station by its special amateur call ONLY. The German
administration pointet out that other traffic would be illegal
traffic under the terms of an amateur license.
For more information have a look at http://www.muenster.org/dtc
(click on "News" there) to get all you need for that cross-band
activity.
We express our best wishes to our friends of the Greek Telegraphy
Club for all their work to get that special activity going and hope
that all who like to make a QSO and get the special QSL card will
succeed.

Randy:

I have never used one but the Mackay receivers are commercial, maritime, and military grade receivers, used in applications that require stability and high reliability. Built like a bank vault. I suspect that, new, they cost several thousand each.

A lot of that commercial gear was intended to be used on a small number of fixed frequencies, without a lot of tuning around. If you are looking at one, be certain to get a complete set of manuals with it and take it for a test drive for a few days, if possible. I am familiar with the Racal gear that the Army uses in radio intercept and, while it's great stuff, it's really not suited for amateur application -- not easy to tune and manipulate because it's mainly intended to sit on one freq and listen -- or scan a set of freqs, not tune around like we do.

Failures can occur in driver and PA stages that cause massive IMD and
other nasty effects; filters would have no effect on that.

[snip]
> think. At that level you are nearly saturating the pair of 3-500z's.

All well and good, but what if the signal's dirty coming into the amp?
What if it's the exciter that's the problem? I had a TS-930 with a PA
that became unstable when operated on 30 meters, spewing garbage all
around the operating frequency. The only visible indication was a
certain sluggishness in the meter readings during keying. I probably
never would have noticed it on SSB. (See, folks, CW does have it uses!
:)

> have never had a OO notice. I'm mister clean. I hate a nasty overdriven
> signal. :) MK.

Good! But if you did get an OO notice, wouldn't you at least check your
signal?

Bob,

We have a franchise here in Fort Myers called Batteries Plus. They have
a spot welding machine for batteries. They have "rebuilt" several of my
battery packs over the years for far less than a new OEM version. If
you have a franchise near you, I'll bet they'd tack them for you.

Thanks Joe. What's happened is I lucked into a sale from the Corps of Engineers where I picked up 3 of the receivers, a couple of transmitters, power units, an old XT computer for message logging, manuals, cabinets, microphones, etc. I was just trying to figure out what to do with it.

1513. Re: ABOLISH the no-code "license"!

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-20 00:00:00 UTC
From: justkev@email.com
Message-ID: <371c7991.1947636@news.mint.net>
Source record: 145309

I am a "no-code" licensee. Just because I have no desire to upgrade
beyond where I am doesn't mean I am any less an amateur operator. I
have a license from the FCC just like you coders have. If you want to
claim no-coders have their heads up there asses, I suspect you have
yours further up your own ass - your attitudes prove it.

People keep refering to the meter movements accuracy , I question the slugs, check from one to the next . What good does the meters accuracy mean If my slug reads higher than someone elses slug , I guess now there is now 2 things to consider with regards of accuracy, the meter movement and the slug. Again, either you guys dont own more than one slug of the same value or even different values to really see what a differance there really are between the slugs

Just a quick reminder! DoNkBoY99 is a LOOSER! I just want to be sure all in the Newsgroup rec.radio.amateur.misc knew. Just incase they weren't sure I'll repete it again so all will know that that person is a complete idoit, looser, and a fool. This has been a public service announcement. from Me Where's PORKBUTT! I can't wait till he is off the air for good. When this questions asked again we can all say who cares he is off the air thats all we care about. How many CBers did you ripoff with those Texas Star amps? Porkbutt will be getting grid squares on CB radio. How do you like that Mr I I I PORKBUTT know it all

But any improperly loaded amplifier is subject to be
overdriven, and therefore to generate splatter. ALC doesn't
solve the problem since it can't function until the amp is
already overdriven. It happens regularly, not everyone is
that knowledgable or conscientious about watching out for
it.
Solution: Use an amp only when really needed, and use it
carefully and intelligently. I won't use one without a
monitorscope in the output line. No, I've never been called
to task, either. I consider it the proper thing to do.

Ouch Jeff !!!! I thought you were pro CW (grin)

They would just use computer generated CW and we would now have the same garbage as we have on useless net.

You're right, Brian. My comment was unfair to our CB service. CBers here
are limited to 12W PEP, while the JA's are limited to 10W in their res-
tricted HF access, although both are phone-only.

>or even different values to really see what a differance there really are
>between the slugs

Right. And the *same* slug can give different readings at different
frequencies within its specified range. The compensation is far
from perfect across the marked range. That same slug will give
different readings again if it is used in a different line section.
The machining of Bird line section castings isn't very tightly
controlled (a small difference in insertion depth of the slug makes
a pretty large difference in the indicated power). Then consider the
nonlinearity of the diode at different power levels, temperature effects,
etc, and you see that there are many potential sources of error. The
meter movement is probably the least of the factors in determining
the instrument's accuracy.

In our shop, we mark slugs to be used with a particular line section
and meter, and make calibration charts for the combination at the
frequencies where they will be used. (We have a Dielectric water
load with flowmeters and temperature probes so we can calculate
actual power and prepare the calibration charts.) That can get us
to about 1% of full scale for the higher power slugs. At low power
levels, uncertainties in flowrate and temperature differential can
lead to a larger percentage error for our calibration setup. So we
try to avoid using the instruments near the low end of a power
range.

Not sure why this is on the "swap" grp, but I was surprised at the good sensitivity on 2M with my FT-100. I'm getting clear reception on repeaters that are usually scratchy sounding. Don't have 440 ant. to try but County EMS (450.xxx) comes in just like scanner using 2m ant. HF works great too. DSP is very impressive, now if I only had smaller fingers or the FT-100 had bigger buttons it would make a nice base rig (which is what I am using it for.)

April 23, 1999
Target: undisclosed.recipients

Welcome to the W8MMQ Wire for April 23, 1999! This newsletter is distributed weekly by W8MMQ and the Radio Society of Central Michigan, and is available free to all radio amateurs. We have a new layout for the email version of our newsletter, and hope that you enjoy it!

If you would like to receive this newsletter via email, or would like to be removed from our mailing list, contact Dan, W8MMQ, at w8mmq@voyager.net. Your email will be answered as soon as possible.

Stories in this week's newsletter:
o Swatch Cancels the Beatnik Mission;
o The FCC Denies Extension in Malicious Interference Case;
o Skywarn Should Expect Busy Season;
o Upcoming Amateur Radio Contests;
o And much more!

*** SWATCH CANCELS THE BEATNIK MISSION ***
The Swatch Watch Corporation cancelled the scheduled "Beatnik" mission last Friday. The controversial "Beatnik" satellite would have broadcast non-licensed, non-amateur radio transmissions within the two meter satellite band, around 145.82-MHz.

The satellite was to be launched by hand from the Mir space station on April 16, but Swatch cancelled it. Swatch claims that the "Russian transmission 'Gelios', a key link with the MIR space station, was severely damaged." However, most amateur radio operators believe that Swatch finally listened to the increasing oppposition from amateurs all over the world, and thus, decided to cancel the mission.

Although the Beatnik was cancelled, the ARRL and Ham Radio Online, as well as other news agencies, are reporting that another satellite was launched on April 16. Immediately, there was concern that Swatch had lied about cancelling the mission, but as of yet, no transmissions have been heard in the two meter band from this new satellite.

We will have more on this story, if it should develop. Until then, it would appear that amateur radio operators have won yet another battle for their spectrum.

--- W8MMQ/KC8KFZ

THE FCC DENIES EXTENSION IN MALICIOUS INTERFERENCE CASE
The FCC has denied Extra licensee Kornwell Chan, W3CI, of Dresher,

Pennsylvania, an extension of time to reply to a March 10, 1999, Notice of Apparent Liability to Monetary Forfeiture. Chan sent his request for extension via the office of US Sen Richard Santorum. FCC Legal Adviser for Enforcement Riley Hollingsworth noted April 6 that Chan was visited by FCC personnel February 21 and did not request an extension until March 29.

Chan and Technician licensee Michael E. Gallagher, KB1DTA (ex-KB3DHX), of W Concord, Massachusetts, each received $7500 fines from the FCC in connection with malicious interference to the Phil-Mont Mobile Radio Club VHF and UHF repeaters. Following up on complaints from the Phil-Mont club, FCC personnel monitored interfering signals which included transmissions of classical music and a person talking with a disguised voice. In February, FCC personnel tracked the signal to a vehicle in Willow Grove, Pennsylvania, occupied by Chan and Gallagher, and equipped with amateur gear.

The FCC cited both licensees for failing to operate "in accordance with good amateur practice," failing to identify as required, transmitting music on amateur frequencies, and willfully impeding legitimate amateur communications. Chan and Gallagher reportedly told FCC officials that Chan used Gallagher's station to transmit music on amateur frequencies. The FCC said Gallagher "is equally responsible" for transmissions made using his station.

--- Taken from the ARRL Letter, April 16, 1999

SKYWARN SHOULD EXPECT A BUSY SEASON
Operators involved in the National Weather Service's SKYWARN program and the Hurricane Net may be in for another busy year.

National hurricane forecaster William Gray is sticking with his earlier guess about this hurricane season -- and it's still not looking good. Gray is predicting 14 tropical storms, nine hurricanes and four intense hurricanes. They are the same figures issued by the Colorado State University professor in December.

Gray and other forecasters say that the next big storm could cause billions of dollars worth of damage to US coastal areas. Find out what else Gray has to say at http://www.storm99.com/.

--- Taken from The Hudson Loop, April 19, 1999

HAM RADIO HELPS AFTER OHIO TORNADO
Ham radio was among the first respond after a killer tornado ripped a south-east Indiana and south-west Ohio the morning of Friday April 9th. The tornado left four dead and over two hundred homes destroyed. Winds clocked in excess of 250 miles per hour felled many utility poles carrying electric power and telephone service to over a quarter of a million residents.

Members of the Queen City Emergency Net provided communications into and out of the tornado ravaged area. Steve Lewis, N8TFD, is the club

spokesman:

"Basically we went out this morning to do preliminary damage assessment. That is determining basically the perimeters of the damage. How wide spread it is. Not specifically how much damage, but what kind of coverage.

They use that information to open shelters, which we also staff. And then this afternoon we sent out several hams to do damage assessment, specific home by home to determine what the damage was to the homes. That's for Red Cross, so they can determine how much assistance they may be eligible for." Lewis

The tornado's track took it from Aurora, Indiana to Clarksville, Ohio. Two of the four fatalities occurred as he twister was crossing Interstate highway 71. The Queen city Emergency Net and other area hams provided communications support for several days.

--- Taken from Amateur Radio Newsline, April 16, 1999

Editor's Note: Visit http://www.warn.org/, the Weather Amateur Radio Network, for more information on Skywarn operations in the Cincinnati, Ohio area.

UPCOMING AMATEUR RADIO CONTESTS
For the latest amateur radio contest information, visit the ARRL's Contest Calendar, at http://www.arrl.org/contests/. Also, for the latest information on upcoming events and hamfests, visit the ARRL's Hamfest Calendar, at http://www.arrl.org/hamfests.html.

The Six Meter Sprint, sponsored by the Six Club, will run from 2300-Z April 24 until 0400-Z on April 25. Operate six meters only, all modes. For more information, visit http://6mt.com/contest.htm.

The Weak Signal Activity Weekend, sponsored by CQ VHF Magazine, will run from 6:00 pm local time on April 23 to 12:00 am local time April 25. Operate six meters and up, on SSB, CW, or any digital mode that takes up the same bandwith as a SSB signal. For more information, visit http://www.cq-vhf.com/.

International Marconi Day is taking place on the 24th of April to celebrate the birth of Guglielmo Marconi. The event is again being organised by the Cornish Radio Amateur Club. Participating stations will operate from 0001 UTC until 2359 UTC on the 24th of April on all HF bands plus 2-metres. The main mode of operation will be SSB, but all modes are permitted and are actively encouraged. (Information on the International Marconi Day events taken from the Radio Society of Great Britain)

The "International North Pole Expedition" with the "Russian Robinson Club" is now active until April 25th. It is under the sponsorships of the Federation of Parachute Sports of Russia, in accordance with the direction of the official preparation and realization program of the

celebrations of the 70th Anniversary of Polar Aviation, the 70th Anniversary of foundation of the First Polar Station at the Franz Joseph Land and the 50th Anniversary of the First Skydive onto the North Pole. This expedition is truly unique. It is the first time that an International Expedition will be routed via: Moscow - Murmansk - the Franz Joseph Land - North Land (Srednij Island AS-042) - North Pole. This expedition is in preparation for an expedition to the South Pole, whereby new technologies pertaining to performance in the polar conditions are to be worked through. The callsign of this Expedition is RV3MA/0. (Information on the North Pole Expedition taken from The Ohio/Penn DX PacketCluster)

DX REPORT
From Nigeria, stations will be active with the 5N99 prefix until the 30th of April, to celebrate the 'Nigeria 99' Under 21 World Football Championship.

From Ethiopia, ET3VSC is operational, using SSB and CW, including CW on 80 metres between 2000 and 2300 UTC.

And from the Seychelles, Gavin, GM0GAV, will be active as S79GT between the 22nd of April and the 5th of May. He will be using CW on 20, 17, 15, 12 and 10 metres, and possibly on six metres. This counts as AF-024 for the RSGB Islands on the Air Award Programme.

Information contained in the weekly DX Report is taken from the Radio Society of Great Britain. Visit the RSGB web site, http://www.rsgb.org/, for more information.

YOU CAN HELP!
If you would like to submit information to the W8MMQ Wire, please contact Dan, W8MMQ, at w8mmq@voyager.net. I will review any information sent to me, and consider it for this newsletter. Also, if you would like to be a regular contributor to the Wire, we would love to hear from you!

AND ... IN CLOSING
Thank you for reading this issue of the W8MMQ Wire. We hope that you have enjoyed it, and please, feel free to pass it along to others.

To read the W8MMQ Wire online, visit http://my.voyager.net/w8mmq/. An archive of past newsletters is now available from the web site.

Also, visit the W8MMQ/KC8KFZ Antique Radio Page, at http://my.voyager.net/kc8kfz/. You will find a nice collection of links to antique radio organizations and radio galleries.

Information from the following sources was used in the production of this newsletter: Amateur Radio Newsline, the ARRL Letter, the Hudson Loop, the RSGB web site, and other published reports.

Like I said, I am ignorant of the sound of spark-gap. The dots
and dashes must have decayed at the same rate. Did the dashes
just decay for a longer time than the dots?

Actually, later spark transmitters--the quenched gap models didn't sound too bad--I've got a 1 KW Navy quenched gap system here behind me in the office. It used a 500 cycle AC power source [BIG motor-generator unit//about 700 pounds of big] to produce quite a musical tone very different from the open gap sets using 60 cycle power. Most of the rotary gaps sounded pretty good too. Craig sort of a MCW effect.

Tom - K1TJ <tjalessi@my-dejanews.com> wrote in message
news:7fkm3o$2ec$1@nnrp1.dejanews.com...
Hello everyone,

Let me start out by saying I have been a ham
now for 25 years. I have a Commercial Telephone
and a Commercial Telegraph license. I am 39 years
old and Extra class. I am a person who learned
code and love CW.

That said here is my opinion on CW:

Code is not necessary for someone to press a PTT
or use digital modes of communications.

If I had my way I would suggest changing the license
structure as follows:

1. Split the CW spectrum in two. CW & digital
and leave the voice mode bands as they are.

2. Create a licensing ladder where voice and
data privilages are awarded for passing JUST the
WRITTEN part of the exams.

3. MAKE CW AN ENDORSEMENT or a privilage which is added
to a persons license! Maybe at 10 WPM

It makes perfect sence to me.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX
Association, Ohio/Penn PacketCluster Network and Wayne Mills (N7NG)
for the following special DX information.

From iglou.com!n4gn@nshore.org Wed Apr 21 11:03:26 1999
Date: Wed, 21 Apr 1999 10:52:51 -0400 (EDT)
From: n7ng@arrl.net
Subject: P51BH
To: editors@n4gn.com

Gentlemen:

Martti Laine, OH2BH was heard signing P51BH early Wednesday morning from
the DPRK. The following release should help to put this appearance into
perspective. There are few details available at this time. Further
operation will depend on the situation, but is not planned. Additional
information will be released as appropriate.

73, Wayne Mills, N7NG

****

NORTH KOREA - MOST WANTED DXCC COUNTRY

Countless DXers are eagerly waiting for a North Korea activation.
The country is the rarest of them all - for a good reason.

Often the value of amateur radio does not signify anything
tangible for these developing countries. Hence, a specific dimension
should be discovered.

North Korea is totally isolated from the rest of the world, and visits
are allowed only for a special purpose.

Transmitting by radio from North Korea has been, and still is, a highly
sensitive issue.

Many parties have worked tirelessly in looking for ways of offering valuable partnership to North Korean society. Only a handful of P5 radio contacts were made in 1995, and the efforts to produce more will continue.

DX history tells us that sooner or later, the rare ones will be available to those who Deserve. That last word is spelled with a capital "D" to illustrate the need for a greater understanding of the overall issue, and the need for patience. That is always a worthwhile resource in DX.

The efforts will continue. Martti, OH2BH, is currently in North Korea pursuing those opportunities and searching for that magic dimension to please both ends of the circuit.

This is not a DXpedition, and Martti will make only sporadic QSOs while showing the equipment and the concept of amateur radio to those who have the power to decide.

If you did not make a QSO this time, please feel relaxed since this kind of intermediate steps are always needed, and at best, they may lead to more activations.

DX is an everlasting joy, and with some missing countries, the joy will stay fresh. Always.

Boring. ZZZZzzz......

Are you really allowed out in public unsupervised with that narrow
a scope of brain activity? Code is not a measure of intelligence.
It has _everything_ to do with desire. (and practice time)

There's folks who don't want to write, even though 7 year olds do it every
day.
There's folks who don't want to sing, even though 7 year olds do it every
day.
There's folks who don't want to ride a bicycle, yet a 7 year old can do it.

I learned my code as a Boy Scout. I do not desire to use it 20 years later.

How many languages are you fluent in? There's 7 year olds that know 3 or
more.
How old are you? By your age, how many languages do you know? I mean, come
on! Is that _all_?!? You should know most, if not all the worlds languages
by now.
You must be really stupid, then, right?

Perhaps desire has something to do with your lack of multi-language
fluency, yes?

There are, however, folks that can't _think_, even though 7 year olds can
do it.

Message-ID: <7fkm3o$2ec$1@nnrp1.dejanews.com>
Source record: 145173

Hello everyone,

Let me start out by saying I have been a ham
now for 25 years. I have a Commercial Telephone
and a Commercial Telegraph license. I am 39 years
old and Extra class. I am a person who learned
code and love CW.

That said here is my opinion on CW:

Code is not necessary for someone to press a PTT
or use digital modes of communications.

If I had my way I would suggest changing the license
structure as follows:

1. Split the CW spectrum in two. CW & digital
and leave the voice mode bands as they are.

2. Create a licensing ladder where voice and
data privilages are awarded for passing JUST the
WRITTEN part of the exams.

3. MAKE CW AN ENDORSEMENT or a privilage which is added
to a persons license! Maybe at 10 WPM

It makes perfect sence to me.

Sending/receiving CW without a machine is just a myth since the
transmitter/receiver *is* a machine. Most commercial transceivers
even contain an embedded microcontroller.

> The morse code can be detected with the aid of only rudamentry
> equipment and the generation of a signal in times of dire circumstances

Please try an actual experiment using an "arc" and let us know how
it turns out. I predict all you will do is aggravate your neighbors
and the FCC. I doubt that any hams can read spark-gap code.

>
BUT unless there is a total national
> ban on concealed weapons we can not stop criminals from getting guns and cut
> down gun related killing and wounding in our cities.

You'd better make that a "worldwide" ban on concealed weapons, Bob, and that's 'mission impossible', of course. It's curious to me that if the government can't stop the smuggling of tons and tons of cocaine from entering the country, how do they expect to prevent guns from being brought in by the thousands, whatever the law?

I'm told that under NAFTA there is a category of trucks that cross the Mexican border that are exempt from incoming inspection. In other words, all they have to do is to show their pre-approved paperwork and they are waved on through the inspection point. The load is ostensibly inspected and approved by the government involved. Yeah, Right!

So while the solution seems simple--just ban the guns--, reality is, as always, much more complex. A true gun ban is not possible even if it was desirable. RESPONSIBILITY is the key. Everyone today insists on their "rights", but when "responsibility" is mentioned they duck and dodge.

So one of the kids who did the shooting in Colorado -no concealed weapons involved there, BTW- drove a BMW and had his own website where he posted reams of material which should have helped predict what was coming. Apparently no one took him seriously. He had the "right".

I wonder how long it will be until every victim of such stuff sues Hollywood for the planting the seeds of all this in children's minds...a couple are already underway and probably the Colorado situation will cause many more. It's about time.

Dick

In article <7fjup7$iv5$1@newnews.startext.net>,
"BD" <bodu@pobox.com> wrote:
> English isn't very international?...

IMO it's clear <helmsman@mindspring.com> was just being ironic (but of course I could be wrong).

But I suppose it depends by what you mean by "very international". English is very widely used, but it's still spoken by only about 10% of the world's population (perhaps 15% if you lean over backwards). So it's by no means "universal" (I've been in some situations where I couldn't find any English-speakers, in fact no one who spoke German, French, Spanish, or Russian, either... and that was in Europe!). It might be better to call it a "world" language, or a "language of wider diffusion" (a term sometimes used in linguistics circles), since it's not a language tailored to be international; thus it's comparable to French in Africa, Spanish in most of the Americas, Russia in the CIS, etc., but it's definitely the most "successful", in the sense of being beyond question the most widely diffused. But it's the offical language of international (as opposed to domestic) air traffic control, the "preferred" language of pop music, and more-or-less the "world business language" (when a Norwegian businessman meets a Japanese businessman in Shanghai, they will probably converse in some kind of English, if they have any common language at all), and some huge percentage of the scientific papers being produced today are in English. Some people object to it because for the majority of the world's population it's a second language, and in every conversation with native speakers they are "talking uphill", so to speak. Having experienced the difference betgween having a conversation in French with Africans, for whom French is a second language, as it is for me, and having a conversation with someone from France, I guess I know what they're talking about.

If you're interested in this question, I suggest you get hold of a copy of David Crystal's book on English as a world langauge. I disremember the title, but you ought to be able to find it in amazon.com's website.

Keep reading Cecil long enough and you eventually find out
how little he really knows.
Most experienced CW operators can read a small change in
the character of the noise that is caused by a very weak CW
signal. So you doubt that those hams could read
sparkgap code. How uninformed can you be?

1560. Re: Advice on radio type needed

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-21 00:00:00 UTC
From: Bill Cheung <cheung@netbistro.com>
Message-ID: <01be8c17$f2e84f80$0100007f@LocalHost>
Source record: 145192

I used to have a 4 watt handheld CB - it was quite bulky and had a telescopic antenna. The best range I ever got was about 4 miles, and that was talking to a base station that had a decent antenna. From handheld to handheld I've never gone past 2 miles, so there's really no difference in range from the FRS. I think the FRS radios are smaller and better suited to your needs.

For emergency purposes, get a cell phone. It will be cheaper. After numerous attempts at trying to get someone who is awake and monitoring a repeater in a town other than where I live, I concur with my XYL that a cell phone would probably work better in that situation, especially in an urban area. ("Hi, yeah we're broken down here in East ..... at the corner of .... and ....") Of course you could always chance it that someone within 1 or 2 miles is monitoring channel 9 on a CB :)

Nextel is marketing a cell phone with direct 2 way capabilities. Does anyone know any more about this? I think it is a phone that you can use as a 2 way radio for other similar phones within your cell area. Sort of like VHF ham bands but no license?

I think you should get your ham license anyways, and then try to get your wife and kids interested enough to get licensed. My 3 year old is starting to learn code along with me!

hawke wrote:
>> (1) FCC acted illegally
> Produce the documentation that proves this allegation

The Communications Act established FCC to execute and enforce the Act. The Act is the document you request. It is available at your local library under United States Code, Title 47. Clearly FCC has not, and under Chairman Kennared will not carry out its mission, even with knowledge of violations. FBI admitted to violations, as did the Department of Defense.

>> (2) FBI acted illegally
> However, you have yet to produce any documentation to back
> up your other allegations.

Perhaps to someone like yourself who is illiterate, this may seem to be the case. FBI admits in a letter to Congressman Newt Gingrich that it violated the Communications Act. The Act is clear, use of government stations for deliberate interference is illegal.

>> (3) ARRL acted in the interested of profit only
>> and therefore is disloyal to the US, Americans,
>> Amateur Operators, the Amateur Radio Service,
>> and its membership by voting to supress the
>> story on jamming.

> Really? Based on what proof or documents?

Check with ARRL and find out why they voted to exclude the story from QST magazine. Why would the most powerful story on FCC criminality and jamming not warrant the attention of the ARRL? You won't accept the truth from me, see what kind of lying bullshit the ARRL gives you on this. I have the letter and may post it to the website, but not for one ignorant illiterate jackass who cannot read.

>> I have made the error of not locking squarely on
>> point and refusing efforts to distract on trivia,
>> minutiae, and attempts to execute the messenger.

> Ah yes, but you have done all of the above without
> remorse or compassion.

Thank you for that. True I have no remorse over telling
the truth, and no compassion for communist jackasses who
run the government or the communist sympathizers who
support an illegal and illegitimate government.

Returning to the original point of this thread at:
http://www.atlcom.net/~geozim/index.htm

FCC JAMS HAMS,
the FCC is a criminal faction of a criminal executive branch,
engaged in a criminal coverup which is further protected by
a criminal Justice Department, also a party to the crime.

The FCC knowingly, intentional, deliberately, willfully and
purposefully supplied radio jamming equipment to the FBI and,
with reasonable assumption, to the US Air Force for the
purpose of jamming AM and FM radio broadcasters, TV
broadcasters and the Amateur Radio Service. The amateur
station jammed was defined as a Title 47, Code of Federal
Regulations, Part 97.405 Station in Distress, relaying
emergency communications critical to safety of human life.
As a result, appoximately 100 people died.

FCC is also a deliberate violator of the Freedom of
Information Act, using an exemption of documents not
allowed under the list of exempted documents types.
Whereas, I have not posted details on this to the
website yet, you can read the 36 descriptions of
FOIA requested documents in the FOIA Administrative
Appeal letter. All of these are denied on the basis
that I have figured out what the nature and content
of the documents are, and the FCC does not want to
verify my logical, analytical and deductive work
that has narrowed down the documents almost to the
point of writting them myself. Actually, I already
have two of the documents, and stand ready to
publish them, as soon as I can arrange to leave the□
country, and post them from a safe place.

Neither last nor least, but in closing on FCC criminality,
FCC is a criminal co-conspirator with FBI to classify
documents pertaining to the criminal operations of the
FCC and FBI. Such classification of documents for the
purpose of avoiding criminal prosecution is specifically
described as a criminal violation in any Executive Order
pertaining to such classification at the time of
classification.

Get the FCC out of the control business, contact your□
Congressman, ask that he support Henry Hyde of the House
Judiciary Committee to convene a hearing into the
criminal coverup by FCC Chairman Kennard of the
criminal operations of the FCC and FBI and US Air

Force engaged in Communications Act violations.

```
Get the American Radio Relay League out of its
tyrannical misrepresentation of the amateur community.
Publish the fact that the ARRL board voted not to
reveal the criminal operations of the FCC and FBI.
What decent person would be a member of such
a criminal organization. If you are in the ARRL,
moral integrity demands you quit.

>It makes perfect sence to me.

I'm 36 years old. As you can see from my call, I learned code well
enough to pass the 20 WPM test a long time ago. I still can run CW
comfortably at 25 WPM. I can even join the ranks of QCWA in less than
a year.

Since I too can say "Been There, Done That, and Been Doing it for a
Long Time", here's my $0.02:

Morse Code is like riding horseback. It's fun for recreation. You
can make the case that there are places where riding horses is the
most effective way to get around. It's even nice to know that folks
can still do it --but you wouldn't make it part of a driving test.

Likewise, with all the wonderful ways we have to communicate, why
insist on demonstrating this one? Why not insist on typing or traffic

handling?

The problem with insisting on proficiency in morse code is that it is choking ham radio to death. Nobody wants to put any effort toward licensing when it's obvious that we're insisting on demonstrating a very unpopular mode of communication. I know several folks who would be an asset to the hobby were it not for this archaic requirement. The argument that code acts as a filter was disproved decades ago. I remember the jerks on 14.313 going back at least 23 years. And the rude folks on 75 meters? I'll bet most of them passed a code test!

The point is that if morse code proficiency is a filter, it doesn't seem to be helping much. Every licensed activity, Aviation, Ham Radio, SCUBA diving, etcetera, suffers from a few idiots with just enough brains to pass the test, but absolutely no common sense or civility. We may have to find better ways of dealing with our bad apples. The test --any test-- is only a gross filter at best.

Finally, if morse code is so great, why aren't we insisting on retesting every few years to prove that you're still worthy of the license? Would you pass at your license's proficiency speed?

Think about it.

Source record: 145200

His name is Bob Youngblood, KT4TR. The guy's nuts. You must have read the QST blurbs about a guy from Indians River County FL having received about 4 stern warnings from the FCC(I guess they mean Riley Hollingsworth) about reading credit reports,mortgage foreclosures and other personal items on the 20 meter band. That's the idiot to whom QST is referring. It's all because Youngblood is a Herbie Whore, meaning a guy who'd sell his soul to the devil to keep the felonious KV4FZ on the air. Oh yes indeed..slimy Schoenbohm sure got him hooked and KT4TR thought he could exact revenge on all the Herbie haters by creating vengeful mayhem on the air. Well along came Sheriff Hollingsworth and the show's over, kids and the tickets will not be refunded. Youngblood has become a "sweetheart" so to speak with only an occasional finger of accusation being wiggled. Let me tell you something about this Vero Beach creep. Last year, just about now, this fool came into my area on business and proceeded to harass me and my wife by telephone. After slamming the receiver down once on the clown, one would think he'd learn a lesson, but no..not this fool. But I taped all his harassment and decided to go to the cops with it. The day I went to the Clifton P.D. to sign a complaint, this dope either called me directly or had someone else do it to issue a death threat. I didn't like that one bit and neither did the Clifton cops, so we took it a step farther. Last May 13th I went to County Court in Paterson to seek an indictment against him. In the meantime a friend of his implored me not to take the issue to the moon since it was taking its toll on " :Bad Blood." Being a kind and loving soul, I decided to back off by way of a letter KT4TR transmitted to his lawyer which I was asked to accept. It was a half-assed apology having the distinct flavor of the writing skills of a 10 year old...and mind you..the guy was a graduate of the U. of Miami, probably majoring in surfboarding. After that incident, "Bad Blood" should have realized he was walking the plank in ham radio but being brainwashed by his mentor Herbie, he continued harassing as many as possible..that is until Riley intervened and Bobby wised up before that ticket became as useful as confetti. You can now hear him discussing the plight of Rich Whiten which, in all honesty,is no plight but rather something blown way out of proportion by Youngblood and his band of scuzzies who know that KV4FZ is going to be taken off the air and therefore want his main nemesis, WB2OTK, to follow suit Well things have quieted down substantially except for Youngblood's and friends' machinations about a winderful net called Intercon that's been holding forth on 20 since 1960. It's a trumped up charge by birdbrain Herbie Schoenbohm that the net is controlled by Jews to steal money from telephone companies and all that rot and such lingo is a boon for bigots, idiots, sociopaths...you know..the run of the mill Schoenbohm crowd. See ya around gang. Doc. AF2Y radiosigs@aol.com.

The problem with a cell phone is that they're no good if the phone system/etc. goes down...
I've just about got my wife talked into taking the Technician class test with me, but I'm having a hard time finding the equipment within our current budget. (Which is why FRS is somewhat attractive...)
The downside of FRS is that (as I understand it) it's not much good for contacting the outside world.
Thanks for the info,
Trevor

Source record: 145206

I'm receiving AM stations without benefit of a receiver. I unplugged the audio cable from the RX320. The audio cable shield is still grounded to the RX320 chassis, and from there, to the cold water pipe. Walking back to the PC, I noticed the sound was on. WMAQ's transmitter tower is about 4 miles down the road, and its signal dominates. If I listen carefully, though, I can hear other stations in the background. The line is quiet when disconnected from "ground". Connected, though, the signal is quite strong. It's at least as loud as I normally play the RX320. Since I use this water pipe as RF and receiver ground, it explains the sh**ty reception I was getting. Signal levels would vary strongly, even when band conditions are good.

I didn't think simple rectification could produce such a strong signal. And who would have imagined a cold water pipe could be a diode receiver? Could it be the PC sound card doing this? The audio cable is 45' long, and foil shielded.

If it weren't for the other stations in the background, I would think one of my neighbors were feeding audio into the powerlines.

Weird.

Michael.

Spark-gap code in NOT International Morse, Dick. I don't think
I could read it. I seriously doubt that you could. There are
no dashes. There are only dots with different spacings. I can't
find a chart at the moment, but if I remember correctly, the
code is quite different from International Morse.

I'd like to trade my 1965 Cobra Cam 88 tube type, 24 channels. (One of the few early units that came with an extra channel).

Recently gone over electronically, although the chassis is a bit gooey and needs a good cleaning. Will go base or mobile with included power cords and mounting brackets. Has original hand held microphone, but sounds great with a
TUG8-D104. The channel knob is not original, but you'd
never know it if I hadn't told you. (blends in real well with the scheme). A few minor blemishes in the brushed aluminum face. Also the S-Meter is a replacement....
It is exactly the same size as the original, but it is black face rather than white face. Has fine tune, squelch, PA/CB, and "Dyna-Boost", (or speech
compression).

I'd like to trade for a nice chrome Vibroplex paddle or similar. I'll entertain all ideas, including swapping for a repair job on my Hallicrafters
SX-24. It needs the four section electrolytic cap in the power supply replaced, and possibly a new choke which I think is what took out the cap to begin with. I have a schematic to go with it, but I'm not talented enough to fix it.

Please email Cary at cfries@tic.bisman.com.

Regards,

Cary Fries

I defy you, Doctor Hate, AF2Y

I defy Intercon, I defy PORKBUTT, WB2OTK, soon to have his ham ticket removed.

You and Porkbutt will soon see what it's like to have "Quiet Hours" on you.

I salute Mr. Hollingsworth, for the fine job he has done in taking care of
WB2OTK.

And the Stumpjumpers!!!! I'm #61 AF2Y!!!

Maybe so, but can you copy it, Jeff? How do you differentiate
between the dots and dashes since they sound identical? I
have never heard spark-gap so I am ignorant. I have heard
telegraph clicks and haven't a clue what was being sent.
I remember seeing a Morse telegraph chart and it was quite
different from our International Morse chart.

I'm not trying to give you a hard time. I'm just ignorant
and skeptical.

In a stunning development, the Washington Post is set to report in a front page, above the fold story, that the ARRL DXCC desk is funding the Kosovo Liberation Army.

According to the Post, ARRL is one of several organizationsd in the US that has become so desperate for the lucritive ham funds of a developing newly independent country, it is seeking to install a pro Amateur puppet regime in any future PTT bureau.

According to an anonymous ARRL Executive Vice President

"this is something good for all hams and DXers and contesters especially. Martti Laine, OH2BH is readying a heavily armed, paramilitary DX jump team to set up a operation on the heels of NATO ground forces this summer."

State Department spokesman James Rubin noted

"we've seen this kind of behaviour before from the ARRL, particularly the recent Palestine operations. Key League insiders are attempting to establish a private initiative through which to funnel money from the DXCC program to their own coffers. The Justice Department is investigating, I understand."

Is your frequency coordinator telling YOU it will take 4 to 6 weeks to find you a frequency pair ? Do all your calls end up on his cah phone ? Then here's some advice.

Do what the ARRL's very own local Special Service club did when they had had it ! Put up your repeater, ask questions later.

Frequency coordinators are the geek's geek and V UHF prima donnas with a thirst for power that will never be quenched. Many do actually hold on to frequency pairs because one of these days, good old Gramps is going to break down and buy that new repeater to replace the one that died in 1987...

I believe it only applies to the higher speeds. They can make accommodations
for hearing impaired folks. Talk to a local VE about it, they'll have all the
info you need.

73 and good luck

New Internet Web Site
"Shake down begins now until May 1, 1999"

http://www.web-cycat.com/hart

Hanmband Trader... (coming soon)
A complete site devoted to the buying, selling and trading of
amateiur radio equipment. This site will grow if needed as
activity requires.

Chet's Internet Favorites...
because my browsers favorite menu is just too small. I created
a page to contain those pages I've found very useful or that I
check regularly.

Chet's Professional Resume...
proving I'm a self-made man. You'll find all the kind of
information you would expet in any resume.

Chet's Obnoxious Opinions...
and I've got a few (this page grows a little every month).

WD4GDB...
a little about my favorite hobby (beside porn); amateur radio.

LMARS...
a complete site for the Lake Monroe Amateur Radio Society - an
amateur radio club that I belong to and that I am the
webmaster for.

Chet's Personal Pages at http://www.web-cycat.com/hart

TAKEN FROM AN ACTUAL PROFILE ON QRZ!

My name is . I am a licensed amateur radio operator by the FCC. I own a profitable website design company in , . All I really want to say is that ham radio is a useless, antiquated hobby and I sincerely hope that the FCC sells amateur bandwidths to private companies, whom I believe can use them more effectively. Ham radio operators are difficult people to get along with and I am proud to say I do not associate with them. Hopefully, one day there will be no more ham radio, a glorified version of CB. &#65533;

Yes, "Ham radio operators are difficult people to get along with".

Was it the age, their repetition due to early onset Alzheimer's or just their general freakazoid status that got to him ? Maybe the repeater drones out a message as long as the Gettysburg Address in a metallic synth voice that uses 1983 technology ? Perhaps the automated voice telemetry system that constantly reports the location of each mobile station did him in. The world may never know...

"Give a man a fish, he eats for a day."
"Teach a man to fish, he will eat for life." (AFRICAN PROVERB)

"Give out ham licenses with Cracker Jack." (K1ZZ)

Of course. thats why I load them to the gills. I always load to full power out and then add a hair more just to be on the safe side. And then talk at a reduced level. No matter how hard a peak I might hit, I will have the headroom to cover it. Also the grid current is a good indicator. If the grid current is high and you are not overdriving the amp, you need to add loading. If adding loading doesn't reduce the grid current, you must reduce drive. I don't use ALC to the amp. I consider it useless. I never drive the amp with more power than it can handle. By the time the ALC circuit has kicked in, it's already too late the way I see it. I never use it.
> Solution: Use an amp only when really needed, and use it
> carefully and intelligently. I won't use one without a

> to task, either. I consider it the proper thing to do.

Yep, a good idea. If I don't need the amp, I don't use it. I have scopes, but don't use every day. As long as I watch my grid I can tell if I have a problem with drive or loading. Anyway all my amp settings are preset for the freq and antenna.I just set the load the it's needed predetermined value for the freq I'm on, peak my tune with a little power and I'm done. I only actually fully tune up about once every couple of months or so just to check for any antenna loading changes. I'm always overcoupled a bit just to make sure I'm ok. MK

>same dusty dinosaur.

My take on this one is we are hobbists on one side of the coin but the
other side is we are also the last line of communications when all else is
gone or not working..
.
Eliminate the morse code requirement and you lose one of the few modes of
communication that can be copied or generated with out the aid of a
machine. The morse code can be detected with the aid of only rudamentry
equipment and
the generation of a signal in times of dire circumstances requires no more
than creating an arc and some type of antenna system.

Personaly I am for reducing the speed requirements somewhat, to the levels
we in Canada have ..i.e 5 and 12 WPM but increasing the depth of basic
electronics knowledge testing for all levels and licence classes thus
improving the available
skills base. (From content of some of the postings I wonder how some made
it to NOVICE or TECH....)

I was at a radio club meeting where PSK-31 was
demonstrated on HF. I must say I was impressed.
I was very active on RTTY on the 70's (especially
on 2 meters FM).

Has anyone had any experience with PSK-31 on 2 meter
FM, is it possible and are there any drawbacks?

Thanks,
Tom

How about simply explaining how a person can generate International Morse Code without any commercial spark-gap equipment. The argument was about this statement: "... the generation of a signal in times of dire circumstances requires no more than creating an arc and some type of antenna system." Nobody has convinced me that a copyable signal can be generated by shorting out a storage battery.

The reason I posted this on this newsgroup is because this newsgroup is read by a large group of hams each day, and I thought that I would have a better chance of maybe finding what was going on with the FT100 that I bought. I am so sorry for any inconvenience that this post may have caused you. I am glad to hear that you are not having any problems with your FT100. It is so funny when I see responses to posts about problems that people are having with their radio. Some people take it personally when they read about defects pertaining to a radio that they have. They act like you are talking about their child or something.

The fact remains that I have a serious problem with the receiver on the FT100 that I purchased. I have received many emails from FT100 owners, and none have had this problem. The dead receiver on VHF and UHF does not seem to be a defect with other FT100s. If not for the receiver problem, the FT100 seems to be a neat little radio. I am shipping it back today to get the problem taken care of.

I have called Yaesu and they feel that there is a problem with this radio.
After reading many emails from other FT100 owners, I feel that this is not a problem with other Ft100s.
I have done numerous tests with the radio.
I have keyed my HT in the house, sitting directly under the tower. Transmitting 500mw from the ht's rubber duck antenna, the FT100's meter read S-9+10, transmitting 1 watt from HT, the FT100 displayed S-9+40, When I transmitted 5 watts from the HT, the FT100 finally showed full scale (S-9+60). The meter should have been full scale at this distance with 1/2 watt.
I also was talking to my wife in her car. She has a 50 watt mobile. She was transmitting full power about 3 miles away on simplex (146.54mhz). The FT100's meter was reading S-3 to S-7 with a lot of static. Even when she was less that a mile from the house, the meter on the FT100 was still just S-9+20.
It is not just the low S-Meter reading. The receiver is also very attenuated. There is static and white noise on repeaters that are full scale and full quiet on other radios that I have had hooked up to the same antenna.

>

This is just my opinion, but, English may be more international than
you realise. I operated on a reciprocal license in Germany as
DA2EU for several years. I worked CW only and was initially worried
about all the different languages that I might be subjected to.
In all that time, only once or twice did anyone try to initiate a
contact with me in any language other than english. This included
contacts with every country in Europe, Japan, Africa, England, etc..

So when you think that learning CW is tough for the US amateurs,
just think how hard it must be in a foreign country. They not only
have to learn the code, but they also have to learn how to translate
that to English.

Martin

Jim,

You obviously have missed the whole point! The small inbred group of
induhviduals who are interested in 3.950 will mostly soon no longer
be able to transmit there (some already can't) so they will need to bait
and taunt and otherwise generally harrass each other here in cyberspace.

They're just practicing.

Don't be so tough on David. If you had experienced what he did with wife #1, you'd be off center also. The guy had one heck of a shock which left him bitter at the world of normalcy. Then there was the "beating" he took at the hands of an unmerciful nun during his elementary school days which also left it's mark by his giving up on Catholicism. Even Brother John's, WA8PBM's religious tracts have made no impact on his tortured soul. Be kind to David. Afterall, you wouldn't kick around a dumb animal, would you?

It should be no problem to hook up a light as your code source so that you will see the code instead of hear it. This is a simple accomodation. The doctor waiver does not come into play untill you have demonstrated an ability at 5 wpm. Since ou will need the light form of code to do it at 5 wpm you will also be able to do it at higher speeds. The doctor waiver requires that reasonable efforts to accomodate your disability be tried first.

Uhhh... I'm reasonably certain he was just being ironic (or perhaps sarcastic?). Like you, I have the impression that the vast majority of hams use English. This doesn't mean that all of them _prefer_ English, or that English is "the best solution to the problem of international communication", or that other languages aren't used in CW, etc. ... but it's a fact that English is widely used.

But since this thread started by being about Esperanto, let me just advertise one of the possible uses for Esperanto (other than ham operations), and then sign off: <http://www.home.wxs.nl/~lide/paspserv.htm>.

George

That's the problem, "it makes to much sense", no one will go for it
because that's not the way we've always done it!

BTW I am learning code because I want to upgrade, not because I want to
start using CW, I don't really care for it that much!

Just remember when your green your growing, when your ripe "you rot"!

1636. making a repeater....

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-22 00:00:00 UTC
From: brian <brian_messman@dell.com>
Message-ID: <7fnlcu$j0v$1@galaxy.us.dell.com>
Source record: 145092

I'm looking to make a repeater out of two old Alinco DR130T mobiles I have sitting around. I know it's theoretically possible to do this without any internal mods to the units, but how? I've thought of rigging a VOX circuit to the output on one radio to the mic feed of the other, but need more specifics. I already have two ringo antennas set approx 50 feet apart to eliminate crosstalk probs without a duplexer and installed a tone board on the "receive" radio. Now how do i get this VOX circuit to work with the two radios, or is there some type of controller I can buy pre-configured?

ANY HELP WOULD BE GREATLY APPRECIATED!!!

1637. WTB: HT-1000, MT-2000, MTS-2000 450-520 mhz

I am looking to buy new/used Motorola HT-1000, JT-1000, MT-2000, and MTS-2000's with UHF high band split 450-512 mhz.

If you have one you would like to sell please email me the following information:
1) Model/Model #
2) Condition (on scale 1-10)... Please not any major defects...
3) Are the following included?
a) Universal connector seal
b) Antenna
c) Speaker Mic (model #)
d) Charger (model #)
e) Batteries (model #/date code/condition)
f) Carrying Case (model # or type)
g) Battery Belt Clip
h) Programming Cable
i) RIB box
j) RSS Software (version #)
4) Is the ID label on the back of the radio
5) Price you are requesting
6) Approximate S/H cost to zip code 11576
7) Your prefered method of payment...

Thank you VERY much... I look forward to doing business with you....
Marc

You have yet to prove that you are, in fact, telling the truth.
all you have done is voice an opinion and not provided any real
facts to back up the claims.

A little more history---in one of the Radio Boys series books,
ca 1926 or so, they were trapped somewhere and did just that--however
they used an old file and dragged the wire lead across the file
serations---giving more of a "make-break" action to it. Did it work???
Did in the book. Craig

You want a Carrier Operated Relay; any of the repeater manuals
(Sessions, ARRL) will have a circuit diagram for a COR. Stay away
from a VOX -- you don't want stray voices in the repeater shack to
key the transmitter.

I built a simple repeater back in the 70s out of a Heath HW-202 trans-
ceiver (had seperate xmtr and rcvr boards isolated from each other)
using a COR as the controller. Worked like a champ!

Have fun!

If you don't find the help you need or decide against the project I need
VHF duplexer,but can't pay over $600. Tracy

1659. Eliminate Geek Theory as Well as Morse Code; Focus on Operations

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-22 00:00:00 UTC
From: Spirit of '76 <NOjaa155SPAM@alumni.psu.edu>
Message-ID: <ueUL27Sj#GA.70@cpmsnbbsa02>
Source record: 145115

Well, I'm new to this NG but I've held my ticket since 1979 and have had extra-class since 1981 or thereabouts (I forget). I too was pretty good at CW and spent many happy hours passing traffic on 3RN and chasing CW DX. I can't claim an EE degree or other technical certifications, but I have 20 years experience with PCs, an MBA in management science & info. systems (and also marketing, which is useful in a discussion about consumer behavior such as this). I earn my living as a management consultant for one of the Big 5 firms and reengineer companies for a living... So, here's what I think:

I'll buy the concept that Morse is becoming obsolete, but let's face it: SO IS ELECTRONICS THEORY. Nobody actually tinkers, let alone builds, his own gear anymore. In fact, I haven't done diddly at the component level since the 1970s.

The way I see it, the new ARRL proposal would gratify a lot of geeks who can deal with arcane, high-level physics at the expense of non-geeks who cannot--but who *can* master CW with simple determination and perseverance.

So, if we are to make the license relevant to a changing world, I suggest the following scheme that will eliminate obsolescence at all levels and focus on our historical and primary mission, PUBLIC SERVICE:

1. Require minimal Morse proficiency because if we don't know it, who the heck will? Maybe 10WPM max.
2. Require only basic EE: for example, P=IE, E=IR and antenna-related theory as those are the most used concepts.
3. Drop semiconductors, amplifiers, oscilators, etc., as no ham actually builds 'em and you can't fiddle with the store bought units. Those who enjoy tinkering are free to learn what they wish to learn.
4. Beef up operating practice to the point of expertise. I'm talking all new technologies from an OPERATIONAL/FUNCTIONAL perspective, not a geek's eye view of things. This would include trunking systems, microwaves, satellites, spread-spectrum, whatever, so that hams can be experts in communications--not doo-dads.
5. Include a "character" test. No sociopaths ought to be let anywhere near our hobby!

So, how about it??

73,

Joseph A. Ames Jr., W3JY

�Tired of not being able to get on the air when the wife and kids are using the telephone or computer? Let my RFI Filters solve your problems for good. - Modular design - Simple install - Many in use in Amateur radio and CB service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail, Easley, S.C. 29642. Or (864) 855-5206.�

If you are one of the persons who has been swindled by this party, at any time in the past or present, the Attorney General of the State of South Carolina would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a �patent pending� on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

```
http://www.scattorneygeneral.org/contact.html
or write directly to:
info@scattorneygeneral.org
```

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of �sending home in a body bag� anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whiten�s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.comFile your complaint against:

```
RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA
```

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his �RF Filters� and him. Take note that his paid cronies were responsible for all of the false �praise� postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus �RF Filters�. These hired accomplices are on Mr. Whiten�s payroll.

```
++++++++++++++++++++++++++++++FEDERAL VIOLATIONS
```

Please note that Mr. Whiten placed these advertisements:

�Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206� [USENET]

�Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206� [CB WORLD]

�FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ A� [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whiten�s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his �custom built� amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at:rlee@fcc.gov Tell the FCC that you want Mr. Whiten�s illegal activities to cease. Tell the FCC that you want all of Mr. Whiten�s unpaid fines to be collected. Tell the FCC that you want Mr. Whiten�s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whiten�s illegal amplifiers and bogus �RFI Filters� to be confiscated.

Do you think that the S meter reading is more not accurate on uhf/vhf and
the radio still has fantastic
sensitivity?
If you inject a calibrated signal into the antenna port and do a 12db sinad
test, then I we could put more
faith in these comments.
How about at least having someone driving out to the fringe signal areas
and compare which radio has the best
ability to pull the signal out of the noise floor?
I have never felt any of my VHF/UHF radios had more than a relative signal
strength meter.
The Quality of the directional couplers and RSSI calibrations are more in
question to me.
Let me know your thoughts Joe?
I enjoy the intent of finding all the faults in the FT-100.
I see Yeasu has been responsive in complaints, and aims to please so far.
I think it is keeping it's head above the water quite well so far.
I will wait out another month or so before I purchase.

I do believe you're confused with wireline telegraphy.
Spark gaps generated a very broadband 'frying' signal,
coarse as sawgrass but certainly readable in long and short
- well, noises instead of tones.

Message-ID: <7fm57b$2fd$1@news.asu.edu>
Source record: 145146

As a fluent - well, almost - Esperantist I read with some grins and chagrins the postings of well-meaning, but uninformed posters to this newsgroup.

Many times I have debunked the Klingon-Esperanto dispute. Even the name "Klingon" comes from an Esperanto word and the creators of Klingon have long been well-known Esperantists - as was pointed out.

It has also been pointed out that there were many more Esperanto websites than Klingon ones - over 100 to be exact.

There are over 100 Esperanto websites at last count including www.esperanto-usa.org which is the website of ELNA - Esperanto-Ligo por Norda Ameriko.

I am a certified instructor for the computerized 10-lesson Esperanto course. If anyone would like the lessons, please send me e-mail and I will send them to you.

As to the claim that "no one would understand a QSL card in Esperanto", that is really too ludicrous to refute. Since the first 900 words in the first Esperanto dictionaries (published in 1887) were found in 4 to 5 of the European national languages, and were based upon Latin, any fairly well educated person can and DOES understand Esperanto.

Someone claimed that Esperanto was exposed as a hoax; someone else said that it was a good idea that "died", HORSEFEATHERS!

Esperanto is alive and well in over 120 countries and over 80 countries have Esperanto societies.

With the Jarlibro (Yearbook) published by the UEA (Universala Esperanto-Asocio) in Rotterdam Holland, an Esperantist can find "samideanoj" (Same-idea-folks) in countries from Albania to Zimbabwe. In some countries in Asia, more folks speak Esperanto than English because English is the hardest language to master as a second language.

There have been world Esperanto congresses every year since 1905 except during WW-I and WW-II. The first congress in the US was way back in 1910! Dr Zamenhof himself attended it (Washington DC). Dr Zamenhof was the creator of the language and was known as "La Majstro" (The Maestro).

If you have been intrigued by the FACTS as opposed to the rumors, half-truths and plain ignorant statements, drop me an e-mail and I will be more than happy to e-mail you the 10-lesson course and guide you through it. By the time you have finished, you will be able to read and write simple Esperanto.

>Like I said, I am ignorant of the sound of spark-gap. The dots
>and dashes must have decayed at the same rate. Did the dashes
>just decay for a longer time than the dots?

Cecil, a short-duration closure of the key would produce a short-duration spark across the gap; a long-duration closure would produce a long-duration sparking across the gap -- there was no detectable decay on the dashes.

Consider how such a transmitter worked: DC was fed into the primary windings of a transformer with an "interrupter" (a crude version of latter day vibrators used in power supplies) and key in series with the primary; hence, pulsed DC was applied to the primary. This induced a high voltage across the secondary, which was in series with a tuned circuit and a gap. The frequency of the interrupter's opening and closing modulated the spark so that a (rough) tone was produced that of course matched the frequency of the interrupter. Some fellows would place a rubber band around the interrupter's arm, increasing or decreasing its tension, in order to increase or decrease the frequency of the tone; that to distinguish their signal from the cacophony of other signals, all on the same wavelength(s).

Such transmitters are very easy to build, but as of 1 January 1966, are not legal to use on any frequency (as per the 1959 Geneva Conference).

Gee, Barry, you're very naive, if you believe that yarn about the batteries
for a printer. How that's supposed to fix a problem with the Gelios weather
satellite service has never been made clear.

And it's not up to Swatch to launch the satelilte at all. They don't own it
and never did.

>>:I am curious. What is your callsign?
>>
>>You don't need to know, but I imagine you could look it up.

It's VK2TLC - I don't know why Barry would be so reluctant to reveal that.

Thanks Craig, for the history lesson. But the original argument was whether
a trapped person could short out a storage battery (connected to an antenna)
and send receivable and understandable Morse code. I still doubt it.

Source record: 145167

>Please tell me how to modified TM211A for out of band.
>Thank's

This radio is a great place to start. What band do you want it to work on? Although not all at once, it can be modified to both TX and RX on any band from 1.8 Mhz up to the 1.2 Ghz range, and it's not limited to the ham or business bands. It can only be modified to Tx and RX in 54.5 Mhz increments either side of a center frequency you choose. A switch (or a number of switches) can be added to "on or off" your modification. The only limitation to this would be the necessity for you to carry or keep at the ready, a number of antennas for each band you want to get out on. I would suggest the single-band mod and see if you like the out-of-band option, then add one or all the rest at a later time. The mod is simple and only requires a blob of solder or a jumper (switched) between two solder pads on the input side of the CPU with a switched ground to the 455khz IF. These are easily found on the schematics that came with the radio. Open the case, follow the diagram and follow your instincts. It sounds silly, but with the diagram in front of you, the two solder pads are right there, as is the 455Khz IF and the CPU. The only trick, the input side of the CPU is the side of the radio that is on your RIGHT, if you open the unit from the bottom while it's facing away from you, but remember, the radio only opens up from the top first then the bottom will be to you LEFT so you have to invert it so the CPU is on your RIGHT. I forget the RadioShack switch part number, just get the smallest SPDT switch they have. Switch ONE to leg 8 on the CPU. Switch TWO to leg 6. Switch THREE to leg 4 of the CPU and so on. Got a kid? Want to give him something to do (spuervised, of course)? If he's only soldered once before, he can do it. There's no un-soldering to do (which we all hate) so the modification is very simple and quick. Just remember to do the actual soldering to the CPU as quickly as possible (each leg no longer than 60 seconds with a 50 watt iron with at least a one minute cool-down before going on to the next leg. SIXTY-SECONDS MAX !!!) This is the only caution to remember during the entire mod. The switches can be hole-mounted through small holes you will need to drill on the back of the radio, and can be done while the radio is opened. It will take longer screwing the radio back together than the actual modification did. The switched ground will on and off the mod and the other switch (or switches) will choose the band of operation. Good luck.

In a private e-mail someone mentioned that I probably couldn't use Esperanto
with anyone on the street.
True, but that would also be the same with Finnish. Does that mean that I
would be wasting my time learning Finnish?

It's a foreign language to me too. I learned it. What's the point?
Shall we rename the morse code "Ham" and insist that all members of
this cliquish fraternity learn it to gain entry?

How about information theory? How about FET or bipolar transistor
biassing? How about typing (for those PSK31 contacts, of course)?
How about construction? How about emergency/disaster station setups?
How about proper phonetics usage and enunciation?

Limiting the hobby by insisting on demonstrating this one method of
communication is not going to take us much past the end of this
century. This hobby is losing people. Twenty years ago, most smart
kids knew what ham radio was. Ask a kid today what ham radio is, and
most will give you a blank stare. If we don't do something to keep
from turning off the smart kids of today, this hobby will lose its
reason for being. It's that simple.

The things ham radio was famous for twenty years ago have been mostly
displaced by the very thing we helped create: radio technology for the
common person. Twenty years ago, a mobile phone of any kind was very
unusual. Twenty years ago a repeater, particularly one with extra
receivers, was a novelty. Twenty years ago, public service and
disaster communications was a big deal because radios themselves, of
any kind, weren't nearly as common as they are today.

Radios have practically become throw-away items. Any drooling idiot
who can dial 911 on his cellular telephone can provide emergency
communications. Anyone with the Family Radio Service handheld radios
can run a public service event. We don't need no stinkin' radio
license for that kind of thing.

So what's left? Education. And who do we educate? Kids! Where are
these kids? They're losing interest. Why? Because, among other
things, we insist on demonstrating this one, difficult, mostly
impractical, and arcane method of communications which most other
services have long since abandoned. The kids want to play with
technologies like PSK31. They want to build things, they want to
enter contests.

And one major obstacle which has stood in their way is the morse code.
Again, we're losing the future of this hobby. Isn't it time we tried

something else?

Remember the discussion was triggered by this statement:
"... the generation of a signal in times of dire circumstances requires
no more than creating an arc and some type of antenna system."

From this I have visions of a ham in "dire circumstances" shorting
out a storage battery to "create an arc". So please explain to me
how one can generate dashes VS dots by simply "creating an arc"
during "dire circumstances" assuming that the person has absolutely
no commercial spark-gap equipment to start with.

: leith@no.verinet.spam.com

First thing, you need a MALE BNC-the female end is on the radio!.
I've had a fair amount of experience with the Hotrod antennas-they have 2
weak spots in their design.
1.is indeed, the BNC connector, which usually fails as you described...the
2 Mtr one is the worst, as the length puts high stress on the plug.
2.the brass ferrule pressed into the bottom of the whip tends to loosen.
This is best repaired by removing the whip, screwing a screw into the
ferrule, and pulling it out completely.
Then clean the inside of the tubing and the outside of the ferrule(fine
steel wool works well), and using a bit of flux, if available, tin the
inside of the tubing and the outside of the ferrule, and solder them
together...it will never loosen again!
As for the plug-I've always used one from the 'ole junkbox...it's a common
size used for large coax cable-most plugs intended for RG=58 won't work.

In this area the W5YI-tests feature multiple guess cw test, vs fill in the blank type on the ARRL tests.

From Newsline reports, and FCC actions in canceling upgrades, it also appears that you stand a better chance of getting the VE's to give you the answers, falsify test results, or forge the signatures on other VEs if you take the W5YI test.

Before this turns into a flame, the ARRL has both
fill in the blank and multiple choice CW tests. The
individual VE teams can choose whichever type of
test they prefer. The team will advise the candidates
which type test they use when administering the exams.

I like that idea. Quite a few hams are lost when it comes to computers.
Computers are becoming more and more a fact of life. Also consider the
number of ham radios which have computer interfaces. I would like to
go back to the days when you could actually repair computers (I'm
talking componant level) instead of just replacing a board. But I realize
we all must move on.

DX302MAN is a organiszation based in Washington DC, USA. We have a fine staff of 25 people who monitor "Zoo" frequencies of 14.313, 3901, 3950 etc. We also run various contests like "Jammer of the Year" and so forth. We recently ran a report called "Liberty Net from Belegrade" last week, which had overwhelming response.

We have a new guest with us in rec.radio.amateur.misc. Some of you know him as "Doctor Hate" aka AF2Y of Clifton, NJ. He is a newbie folks. He can QRM, slander, harass people on 14.313 all day, but when it comes to this Newsgroup, his posts are forever stored at www.dejanew.com for the world to read when he is long gone. We at DX302MAN's HQ want to welcome AF2Y with a contest!!!

CONTEST:

PLEASE VOTE:

Who is the worst Jammer on 20 meters:

1. WB2OTK aka "PorkButt"
2. AF2Y aka "Doctor Hate"
3. KE4TEW aka "Tampa Tewy"

Please submit your vote to DX302MAN@AOL.com no later than Saturday nite. Then on 3950 khz, K5BLB and K5ZU will announce the winner, during the Great Liberty NitWitNaziNet!!!

Enjoy!!!!

Question: How can you have 20 years experience with a device that's
only been around for 18 at best?

Yes, that's right... the IBM PC was first introduced in 1981.

Sure you don't want to revise your timeline just a bit? ;-)

>>I'll buy the concept that Morse is becoming obsolete, but let's face it: SO
>>IS ELECTRONICS THEORY. Nobody actually tinkers, let alone builds, his own
>>gear anymore. In fact, I haven't done diddly at the component level since
>>the 1970s.

I'm sorry you feel that way (about the theory -- I will admit that I'm
not a big fan of Morse code myself), and I'm also sorry you've chosen to
let your skills deteriorate in the face of the 'cheaper and pre-made is
always better!' marketeers.

So you truly believe no one tinkers any more? Look around a little
harder. I've run into plenty of hamateurs who are darn good at it. Look
especially at those who make entire repeaters out of old Motorola mobile
radios, or who convert military surplus gear to be ham-useful.

While hams may not build much of their own stuff from scratch in the
way of receivers or transceivers any more, I still see plenty of homebrew
antennas, accessories, station installations, and some pretty darn good
integrations of computer and radio (and the computers involved are not
always hobbled by Micro$platt's bloatware).

In any case, if there really are no more 'tinkerers' left, why is it
that construction-article bearing magazines, such as 'Electronics Now' are
thriving?

And have you looked at the Handbook lately? Quite a few construction
projects. My my, I wonder why ARRL would use all that space if they didn't
find value in giving people the tools to create something that they can
actually put their heart and hands into making for themselves? Not to
mention getting a free education in the process?

And how about the OSCAR satellites? There's no way they would have
even been conceived, let alone built, without a good grounding (pardon the
pun) in "obsolete" electronic theory. Look at the history of the AMSAT

folks.

>>The way I see it, the new ARRL proposal would gratify a lot of geeks who can
>>deal with arcane, high-level physics at the expense of non-geeks who
>>cannot--but who *can* master CW with simple determination and perseverance.

I would hardly call things like Ohm's Law, circuit basics, and good soldering skills "arcane" or "high-level." Sounds more like you're talking about particle physics or some such silliness.

As for "geeks" vs. "non-geeks," they're just meaningless labels. I've run into 10-year old kids who can grasp electronics better than I have, and I've been at this for 20+ years myself.

I offer, without apology, a translation of your statement above:

"The new ARRL Proposal would frustrate a lot of people who are habitually lazy, too much so to actually work to learn the simple, lifetime-valuable skills, and earn the privileges, that a ham radio license represents."

>>3. Drop semiconductors, amplifiers, oscilators, etc., as no ham actually
>>builds 'em and you can't fiddle with the store bought units. Those who

Oh, meadow-muffins! Even if no ham in the world built their own stuff any more, the knowledge of how such circuits work is still useful.

As for not being able to modify store-bought radios (and even that's true only up to a point), what of it? The skills gained from learning of such circuits are useful no matter what subfield of electronics one is in.

I will add that I have no regrets whatsoever that I worked -- hard! -- to earn both my hamateur and FCC 2nd class commercial ticket. The knowledge gained was well worth it.

You also seem to have conveniently forgotten about the conversion of surplus commercial or military gear to ham service. Seems to me that reverse-engineering what something does, and then modifying it to be ham-useful, requires just a little more than Ohm's Law, don't you think?

I know exactly what you're going to say. That it's cheaper and easier to simply buy something new. While that may, in some cases, be true (at least in the "easier" department), I would be most interested if you can point out, for the same price, a modern-day hamateur transceiver that has the same degree of quality, component-level serviceability, and durability, built into every square centimeter, that a retired military unit does.

>>4. Beef up operating practice to the point of expertise. I'm talking all
>>new technologies from an OPERATIONAL/FUNCTIONAL perspective, not a geek's
>>eye view of things. This would include trunking systems, microwaves,
>>satellites, spread-spectrum, whatever, so that hams can be experts in
>>communications--not doo-dads.

How do you define a "doo-dad?"

In any case... much of what you describe is simply good common sense and courtesy: Listening before speaking, not interrupting, etc. That's basic verbal communication skills, something that should (ideally) be learned at a very early age. Nobody should need to get their ham license just to learn good verbal basics.

As for making someone an expert in the "operational/functional" aspects of the modes you describe, how can you possibly expect that of someone who has not been taught at least some of the theory behind them?

>>So, how about it??

Sorry... I'm too busy designing a couple of OpAmp circuits for class. Having fun with it too! ;-)

Tell you what, though. Go to the next meeting of whatever chapter of QCWA or ham club is local to your area, and start spouting your most amusing ideas about how "obsolete" electronic theory is, and how nobody "tinkers" any more.

While you're doing that, I'd like someone else in the group to videotape the whole thing and send me a copy. It'll make for great entertainment -- especially when you start getting pelted with peanuts, overripe fruit, and any other small-to-medium projectiles that happen to be handy at the time.

Message-ID: <g1VT2.4669$Sl2.5992@news.rdc1.bc.wave.home.com>
Source record: 145028

It's been my experience that the distance between your two antennas is probably inadequate, without filtering you'll most likely still get de-sense.

On the interfacing radio thing, carrier operated relay would be the best... I made a UHF repeater out of some OLD ICOM UHF xtal rig and a Dual band radio that had a useless VHF side to it... Used the old xtal radio as the receiver cuz it had this big ol lamp that came on whenever ir rx'ed anything, since the lamp was 12/13.8v, I just went out and bought a 12v relay and put it in place of the lamp and used the relay to key the PTT line on the other radio... Even added a capacitor to the 12v line on the relay for a hang time...

How bout that. I dunno if you'd find a good chunk of voltage inside the DR-130 that would go high when it rx'ed, can't remember if that radio had a TX/RX or just TX or just RX led in it... If you take that LED out and add some leads to it you could use it as some form of logic to trip a small circuit into triggering a relay that might get you started... Obviously you can't use that line to trip a relay cuz it would be very low in voltage, I dunno if they make real low voltage relays, but you also have to make sure you're not gonna stress the rest of the circuitry in the radio that's supposed to make the LED go on...

This may be a crude way of doing things, if anyone else has a better idea for a modern radio, let it be know.

Don.

You might be able to find a local specialty battery shop that can do it for
you, they should be able to do it the right way... Spot welding tabs on...

I get it done at a local place all the time, it only take a few minutes to
do a whack of cells like you've got.

Bill, I've been an Esperantist for less than two years. Last summer, my wife and I went to Utrecht, Netherlands and stayed with some Esperantists we found in the Pasporta Servo. While on a day trip to Amsterdam, we did bump into an Esperantist "on the street." In February, I was getting off a plane in Arizona. A man saw my green star pin and said "So you actually speak Esperanto." He told me that when he lived in Japan, a man there told him about Esperanto, but that he chose not to learn it. It occoured to me later that if he had learned it, then he could say that he bumped into an Esperantist "on the street." (Well, he can still say that, but you know what I'm saying.)

This should be almost as popular as the "Jammer of the Year" contest, DX302MAN. I pity your poor staff this weekend. There will be tens of thousands of votes to count, as well as all the editorial comment sent in by the voters. Maybe you could post some of these comments along with the results of the vote.

Maybe Sid and Bob can favor us with a duet of "The Pork Butt Song" when he is declared winner of the election. You also should get a group picture of Pork Butt and W9ART, winner of Jammer of the Year for 1998.

Already I think the election is predictable. I think Pork Butt will win hands down. Go to the link below to see why.

Steve,

You didnt say what it is getting into. Item one a G5RV is a compromise antenna at best. The only band it really is resonate on is 20 meters, and that is not all that great. The biggest problem about a G5RV from the RFI standpoint is that the feedline WILL RADIATE. This being said, you will probably find that moving the feedline away from the house as far as possible will help the problem. Or change out the G5RV and replace it with a center-fed ant using coax all the way to the antenna.

Without more specific's on your situation I can not comment further.

One of the things you'll quickly find out, "Banana Nose", is that you can't "walk over" people in this newsgroup, like you walk over people on 20 meters. So your attempts to censor good old fashioned right-wing, Christian conservative speech on usenet will be met with a large amount "flames". Just thought you'd like to know.

Now get back to you little ADL buddies and go out and circumcise somebody......

I received this today from a friend. Sounds like a positive gesture that I
will definitely participate in.

Turn On Your Lights for America

As I was driving to work this morning I passed by an elementary school and
noticed that the flag had been lowered to half-mast in memory of the
students and their families in Littleton, Colorado. What a wonderful gesture
that simple act is. But, I thought to myself, what can I do to show others
that I too am deeply affected by this tragedy.

Turn on a light. Turn on my headlights. Turn on my porch light. But how do I
get this message to others? Use the Internet. I*m sending this message to
everyone on my email list and am asking that you do the same. I am going to
turn on my headlights on Friday morning on my way to work, on Saturday as I
run my errands and especially on Sunday as I go to my place of worship. I*m
also going to turn on my porch lights on Friday, Saturday and Sunday night.
I*m going to turn on my lights for the families in Littleton to show them
that I care about them, that I feel the pain and hurt and heartache.

I*m going to turn on my lights for what is right about this country. I*m
going to turn on my lights against the darkness, the anger and the
prejudice. I hope you will join me. One light is not much but put them
together and we can light up the world.

Turn on your lights * show that you stand for what is right about America.
And as you turn on your headlights and porch lights this weekend; turn on
the light in your heart and soul. Show the world that this is not what
America is all about. With your light shining bright, along with others, we
can come together (if only for a brief moment) and combat the evil that
confronts us all.

Please pass this email on to everyone on your address list. Lets see if
we
can get this message to everyone across this great country before Friday
morning and lets use the Internet for what it was intended - good.

OK, I'll admit, to me this is strike one. I'm an engineer. I have a
really bad attitude about most management consultants. I'll try not
to let that affect my opinion of you.

>I'll buy the concept that Morse is becoming obsolete, but let's face it: SO
>IS ELECTRONICS THEORY. Nobody actually tinkers, let alone builds, his own

Hmmm. You must not have seen the QRP-L e-mail reflector. Folks build
all sorts of stuff. You simply haven't been hanging around the right
groups. Given that you're not a technical person, I'll cut you some
slack here.

>The way I see it, the new ARRL proposal would gratify a lot of geeks who can
>deal with arcane, high-level physics at the expense of non-geeks who
>cannot--but who *can* master CW with simple determination and perseverance.

Physics taught in high school is "arcane, high-level" stuff?

>So, if we are to make the license relevant to a changing world, I suggest
>the following scheme that will eliminate obsolescence at all levels and
>focus on our historical and primary mission, PUBLIC SERVICE:

Umm, public service was never the primary mission of the hobby. It
always has had multiple missions. Besides public service, there was
training, exploration of new technologies, and disaster
communications. I've made a good case in the past that the most
important mission left in this hobby is training.

>1. Require minimal Morse proficiency because if we don't know it, who the
>heck will? Maybe 10WPM max.

And that's precisely the point! Who else uses morse code? That's the
reason why I'd like to see it removed as a prerequisite to get in to

this hobby.

>2. Require only basic EE: for example, P=IE, E=IR and antenna-related
>theory as those are the most used concepts.

Fine. Antenna theory? How deep do you want to go with this? You
complain about "Geekiness" and then you ask for antenna theory?

>3. Drop semiconductors, amplifiers, oscilators, etc., as no ham actually
>builds 'em and you can't fiddle with the store bought units. Those who
>enjoy tinkering are free to learn what they wish to learn.

>4. Beef up operating practice to the point of expertise. I'm talking all
>new technologies from an OPERATIONAL/FUNCTIONAL perspective, not a geek's
>eye view of things. This would include trunking systems, microwaves,
>satellites, spread-spectrum, whatever, so that hams can be experts in
>communications--not doo-dads.

>5. Include a "character" test. No sociopaths ought to be let anywhere near
>our hobby!

I disagree with #3. Often store-bought radios ARE modified, even the
surface mount stuff. Even more to the point, what are you going to do
about all those nice connectors on the back of the radio? What if
your ham radio operator candidate wants to hook an amplifier of Brand
X to a transmitter of Brand Y. How do you propose to have someone set
that up properly if the tests don't demand some kind of theoretical
background?

Beefing up operational practices for trunking systems, microwave,
satellites, spread spectrum and the like requires lots of theory. For
example, unless you understand oscillators and mixers, how can you
explain what a Costas loop is? How can you then explain what an I/Q
diagram is? How can you then explain what's wrong with a digital
microwave link? It all ties together.

And a character test? What kind of test might that be? Shall we
allow only God-fearing people to become radio amateurs? Shall we
count the number of times someone says <expletive deleted> in a given
period of time? Shall we exclude ex-convicts? Or are you talking
about requiring a note from a psychiatrist?

>So, how about it??

/* <flaming stereotype mode on> */ (I'm sorry, but I can't resist!)

This fuzzy argument is a classic example of why I have such a bad
attitude about MBA-toting management consultants. Maybe there are a
few who have experience in the real world and who can really lead a
company out of disaster. But I've yet to meet or even hear of one
(and I have met and heard of far too many).

/* <flaming stereotype mode off> */
(Again, my bias may be unavoidable)

This argument isn't just fuzzy, it's contradictory. It's difficult to discuss because "Geek Theory" versus "OPERATIONAL/FUNCTIONAL perspective" is poorly defined. And the character test is an open invitation to restrict the hobby even further by making candidates subject to even more arbitrary tests than the morse code.

Frankly, from an engineer's perspective, the tests are already at an "operational/functional" perspective. We don't ask for a demonstration of information theory (though I think we should). We don't ask to demonstrate computation of a Fourier Transform. There is no requirement to use anything worse than fundamental trigonometry to get an Extra Class license. If that isn't an "operational/functional" test, then what criteria would you use? Knob turning 101?

Joe, I think you missed a major feature of this hobby: It already is quite operational and functional in perspective. We don't ask its practitioners to build their own radios. We don't ask its practitioners to design a single thing. What little theory we ask for in the exams is needed so that the users can operate a radio safely and properly.

When you attended school, did you complain that classes were not suited to the real world? Of course you did! I did. So do most other folks. Teachers and professors know this. The problem is that they teach a general subject. You're looking for specifics. I maintain that while everything they taught in Kindergarten may have been important, that the importance of each subject in each grade after that drops exponentially. By the time you reach college, you're lucky if you'll use even 10% of what you learned in class.

The problem is that we don't know WHICH 10% out of each subject you're going to need. So they teach the whole subject, not just the specifics you're looking for. And so it is for the test for your ham radio license. It's not Geek knowledge for Geek sake. It's a test for your ham radio activities some day in the future. And as such, I think it quite reasonable to ask for the knowledge base that they do.

So, how about that??

> NA5NA
> Oxford, Arkansas

Hi Nat --- well depends. For general use, the Kenwood hand mike that
came with my TS-850S is superb -- I realized this when I QSOed a JA
station using same. Sounds as good as my MC-60 desk mike. He had both.

For rag-chewing -- your going to get tired of holding the mike and
holding down the key unless you use VOX or a footswitch. Vox is tricky,
a footswitch is a great addition to the rig. Most mikes are wired such
that the audio goes thru without pressing the mike key -- provided you
use another TX key such as a foot switch, VOX or a PTT hand switch.

If you get into DXing, a DX mike can make a real difference in pileup
busting.
Bob Heil offers an optimized DX cartrige and microphones -- see URL:
http://www.heilsound.com/

Some Heil Microphones allow the selection of
either a wide range setting or a DX setting --
the later is tailored
for optimum DX use -- the former for rag-chewing.

The legendary Astiatic D-104 also is favored by DXers, as well as
several others -- Shure, Turner, etc.

See URL
http://www.ac6v.com/pageax.html
For Microphone Mfgs

Impedance matching is a factor -- the older vacuum tube rigs require a
hi-Z mike or suitable matching.

If you get into contesting -- a desk mike is almost a necessity -- allows the use of a foot switch for hands free operation -- coffee in one hand -- pencil in the other -- or both hands free for keyboarding.

Purists will use a broadcast mike equalized for optimum results.

Your Monitor switch on the newer rigs supposedly allows you to hear yourself -- but really doesn't sound like your on-the-air signal. I suggest borrowing a desk mike -- have a fellow Ham transmit -- alternately using both hand and desk mikes and you listen at another station -- real enlightning exercise. Also allows you to set up your mike gain and processor for best results. The mfg's ALC settings can be very conservative -- you want to pack in as much GOOD QUALITY powerful audio as you can for SSB. BTW - listen on head phones, speakers can color the sound -- big time.

Hope to hear your results on the air.

First off, you're not man enough to give your callsign or name. Secondly Christian talk should concern matters of dignity,conscience, ethics,brotherhood,charity and forgiveness rather than the racist garbage of "Crotch",his compatriots and a lackey like you. And in case you forgot, Jesus was a JEW whom you turned into God. I wonder what he'd think of a scumbag like you knowing how you've corrupted his teachings to fit your unacceptable hate mongering?

Yep...maybe they can't stop all guns or all cocaine BUT ask yourself.. If
they can even stop some...wouldn't that save some lives? Isn't life valuable
enough for it to be worthwhile to save even a few innocent lives?

>

Yeah Canada has the same problem..They let a lot of stuff from the US enter
without close inspection! So many vehicles enter Canada from the US that I
suspect there can be only spot checking.

> So while the solution seems simple--just ban the guns--,
> reality is, as always, much more complex. A true gun ban is
> not possible even if it was desirable. RESPONSIBILITY is the
> key. Everyone today insists on their "rights", but when
> "responsibility" is mentioned they duck and dodge.

I never said it was simple. Deciding how Hams should or should not be tested
is not even simple...BUT when changes are made in laws and in the enforcement
of laws they should be made in the right direction. Nothing can be totally
effective but that does not say we should do nothing.

> So one of the kids who did the shooting in Colorado -no
> concealed weapons involved there, BTW- drove a BMW and had
> his own website where he posted reams of material which

> should have helped predict what was coming. Apparently no
> one took him seriously. He had the "right".

Yeah..BUT in that case they used AUTOMATIC weapons which I believe are illeagal in many states and by some limited federal laws as well...BUT apparently the laws were not enforced as they should have been. I have not kept up with the news on that case BUT I find it not only sad but disgusting that those kids could get themselves so heaverly armed without being stopped by their parents or other responsible adults. There must be an investigation to trace the path that those weapons took. The trouble is, we feel sorry for the parents of kids like that. IMHO parents or gardians are at least partly responsible and should serve some jail time for their negligence. In another case a grandfather allowed his grandson to not only get all his weapons but to use his station wagon although the young kid had no drivers license. There is no excuse for such negligence IMHO. It is against the law in many states to leave the keys in a vehicle to tempt theft. That law is there to not only protect cars from being stollen but to prevent unlicensed and inexperienced kids from taking "joy rides" which might threaten public safety.

> I wonder how long it will be until every victim of such
> stuff sues Hollywood for the planting the seeds of all this
> in children's minds...a couple are already underway and
> probably the Colorado situation will cause many more. It's
> about time.

I don't blame Hollywood or even the stupid video horror games. There is a certain amount of aggression in all males...It comes with our hormones. It makes for being good soldiers in time of war, it could help in being good football players, etc. BUT it must be logically controlled and the job of parents and teachers is to see that children are able to have rational self-control and to try to spot those children...[and there are a lot more than we might care to admit]..who are potential threats to society and themselves because they have no respect for human life. These children need special attention and if need be they must be sent to secure reform schools. IMHO many lives have been saved by teachers, social workers, and even parents who have taken the necessary steps to prevent mentally "disturbed" children from acting out their agressive fantacies. We don't read about the hundreds of cases where maniacs ARE stopped before they can harm anybody. We can not publically identify such children because they may become good citizens with proper treatment. AND We can not stop trying to do what is best for society just because of the cases where is wasn't done or where some suggested regulation may not have helped. Nothing is ever 100% effective by itself.

Carl, yea, you might be able to get away with 160 miles on 2m FM but your talking about high towers high power and directive antennas, CW and SSB could work on 2 but your looking at a much more expensive radio than a simple FM rig, and I'll assume that's what you meant when you said your going to buy a "2 meter rig soon" the majority of 2m rigs you see advertized are FM only, ones that allow you to do weak signal work on SSB and CW usually cost quite a bit more.

Forget about the coasts until you upgrade while it is possible to work several hundred miles during an opening on 2m using FM it's very unpredictable and unless your paying close attention to propagation the opening can come and go in a matter of minutes. You also have 6m privileges but 6m is also very unpredictable right now when it's open you can work the world, but when it's not you wonder if there is ANYONE else out there with a 6m rig. 80m and 40m are good for the distances your talking about with your friend, during the day 20m will get you to the southern states and west coast and DX when the band goes long, but 20m would skip over your friend 160 miles away, same for 15m and higher.

Just by passing the 5 wpm code you'll have access to 80 and 40m Novice band privileges, an inexpensive CW rig for 40 or 80m can be had for a song and $20 at many hamfests, most of these are CW only or AM and CW but would work just fine for communicating using CW with your friend. Have fun, there is a lot to learn and don't be dissapointed if you don't succeed right away.

Hey Dan and Tony,

You both are right. I was sending using a straight key to a guy
(handicapped) who was using a reader. He complimented me on my sending,
saying "My reader usually can't read a straight key too well"

Regards,

Arnie -
KT4ST

I Am Looking For The Following Items To Purchase Or Trade For.
I Don't Need All Of This.
These Are Some Of The Models I Will Be Interested In.
If You Have Anything Along These Lines Please E-Mail Me.
73's W5IDX Houston

AEA MM-3 MorseMatic Electronic Keyer

Or

MFJ 493 Menu Driven Memory Keyer
MFJ-1315,
MFJ-551,
MFJ-5409,
MFJ-5425,
MFJ-79,

MFJ462B Multi-Reader

MFJ 452 Morse Keyboard With LCD Display
Or
MFJ 451 Morse Keyboard

MFJ 414 Tutor & Keyer

Only Need One Of The Following

Bencher Or Vibroplex Iambic Paddles
BY-1, By-2 etc.
Also 1 Straight Key

I Have Many Items I Can Trade For Please Let Me Know What You Have & What
You Might Be Interested In.

Maybe they should update the HAM tests to reflect a HAM's ability to setup CW send/receive software
on his PC instead of having to learn code. :-)

Hell, Doc....let's take a look at the Talmud and see what THEY say about Jesus:

--Jesus "limped on one foot' and was "blind in one eye," "he practiced enchantment by means of his membrum,""he committed bestiality with an ass," he was a fool who "did not even know his heast's mind," (Talmud, Sanhedrin 105a-105b)--

As far as not using a real name or callsign, it may make me a coward, but it makes YOU a dumb-ass and a fool, Doc. Because you're now phucking around in cyberspace, where all kinds of wierdo's hang-out and now know your full name and address as:

Charles Schwartzbard
POB 1347
Clifton, NJ 07015

Gee, Doc.....why not use your street address??? Or....are you YOU a phucking coward!!!!

> I'm saying.)

The problem, of course, is that most of the time you'd have no idea whether someone you bumped into spoke Esperanto or not. I've been stopped by a Belgian who spoke Esperanto on the street in Prague's Old Town, and asked if I wanted a cup of coffee in Esperanto by the wife of a charter-boat skipper in Icy Strait west of here (just after I'd clambered aboard cold and wet out of a kayak; yes, I had a cup of coffee, although I don't usually drink it) offered a cup; in both cases I was wearing something that gave them a hint (a t-shirt with "All One People" in Esperanto on it in the former case, a patch that said "Amikeco Trans Limoj" on my halibut shirt in the latter). I discovered recently that my oldest cousin on my mother's side, whom I've known literally for over 50 years, speaks Esperanto; neither of us had any hint that the other did, until I happened to send an annual chrismtas photocollage out wiht bilingual captions (normally I would send Egnlish to the English-speakers, French to the French-speakers, Esperanto to the, etc.). I met David Richardson (a journalist, and author of perhaps the best beginner's book on Esperanto for Americans) by chance on a ferry between Orcas Island and Anacortes, because he had a green star on the bumper of his car. But normally there's no way to tell Esperanto-speakers from ordinary Czechs or Chinese... or English-speaking ham operators! ;-)

George

I didnt say that people didnt have the right to change the rules. What I said was that , right now, ham radio has a limited cw requirement that must be mastered to get a ham ticket.
If you dont want to do that , find another hobby or be happy with the no code. You need to stop putting words in peoples post Ed.

Apply for a licence in the normal manner - enclosing a doctor's/medical cerificate to say your hearing is impaired. The licensing authorities are not inhuman. They are more closely genetically related to us amateurs than chimpanzees - which is VERY close. They may grant you a licence without making further enquiries.

No harm in trying.

Reg.

Hi folks, I have the following for sale or trade I am looking for vhf or uhf equipment as in old handi talkies, vhf or uhf or mobile.

qty (1) Microsoft Bus mouse this is a the new version, with mouse and controller board $20.00 plus shipping from Cleveland, Ohio

qty (1) swap box this is a 16 bit card that accepts pcmcia cards, so you can use you pc cards in your pc, such as memory, modems, you name it, $25.00 plus shipping.

qty (2) MIDI interfaces (music quest) and (voyetra) these are MPU-401 dedicated midi interfaces $25.00 a piece plus shipping.

qty (1) Sound blaster compatable board with the following interfaces on board, for IDE, panasonic, mitsumi and goldstar CDROM drives.
it is 16 bit sampling 44khz with on board amplifier and joystick port.
$20.00 plus shipping, work great with window 95 or 98.

qty (1) Aztech sound board with built in 14.4 modem voice and data.
16 bit sampling and SRS 3d sound $15.00 plus shipping.

qty (1) WavJammer pcmcia 16 bit sound card New media, laptop powered speakers, this is a great pc sound card 16 bit sampling and more $50.00 plus shipping for both. for more in goto www.newmediacorp.com

qty (1) Turtle beach pc sound card (pcmcia) audio advantage with software and midi interface cable $20.00 plus shipping

qty (1) Megahertz pcmcia fax modem card 14.4 it's the gold series $15.00 plus shipping

qty (1)

qty (1) Daytona 64T PCI vga card 1 meg on board very fast graphics card, it is based on theTrident chipset. $15.00 plus shipping

I have the following Laptop Hard drives for sale these are 2.5" form factor they have been formatted and check:
qty (1) Toshiba 260 meg model #MK172FCV $20.00 plus shipping
qty (1) Seagate Model ST91430AG 1.44 gig $55.00 plus shipping
qty (1) IBM Model DPRA-20810 810 meg $40.00 plus shipping
qty (1) IBM DBOA-2540 540 meg $35.00 plus shipping
qty (1) Conner CP2081 120 meg $10.00 plus shipping

I have the following standard hard drives for sale:
qty (2) Seagate ST3283N 240meg SCSI drives 20.00 a piece plus shipping these are new in the wrapper.
qty (2) Quantum Prodrives ELS 140 meg a piece (IDE) $10.00 a piece plus

shipping.
qty (1) Quantum 240sc, 240 meg SCSI $10.00 plus shipping.
I have an assortment of 16 bit Network interface cards NE2000 compatable,
SMC, Anthem also 10 port hubs, the NIC's are 10.00 a piece, the hubs are
$25.00 plus shipping.

If interested in any of these item please reply to craigs24@worldnet.att.net

I have a very nice Timewave DSP-59+ that I am willing to trade straight up
for a good 13.8 Volt 35 Amp (or more) power supply. Unit is in excellent
condition
and works well. Will even toss in power pack. Includes original box and
manual.

1766. Panama Vets take note

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-24 00:00:00 UTC
From: Rob & Heather Williams <will7370@tao.sou.edu>
Message-ID: <37228ACE.4696DDF8@tao.sou.edu>
Source record: 144777

An email discussion list has been started for all Panama Vets. This list is for anyone military or civilian, who has ever been a part of the US Forces stationed in the Republic of Panama. Discussions regarding military experiences, family issues, local culture and everything related to the Panama experience are welcome.

Additionally, anyone involved in the Dec 1989 invasion of the Republic of Panama, otherwise known as Operation Just Cause are particularly invited to participate here too.

This list will try to serve as a connecting link for all who desire to remember their Panama experience and share it with others.

To subscribe, simply go to the following URL:

http://www.onelist.com/subscribe/PanamaVets

Take care,

Robert L. Williams
Former member 6933 Electronic Security Squadron
Howard AFB, Republic of Panama - Nov 87 thru Aug 90

Humans shouldn't need to adapt to unreasonable environments -- it is one of the characteristics of our species that we can create our own environment. The amateur radio laws are human-created and can be human-modified.

Try 14,302.5 on 20 meters. There are around 400 truckers that check in from time to time. We make contact and have personal meets when time and schedules allow. I have met many other amateur operators in this manner. There are both solo and husband/wife teams out there. Good luck and have fun. May be back out there some time after I get out of Calif. and back to Arkansas.

Typical attitude,c/w uninformed rhetoric. Milosevic's aggression against the Serbs! Milosevic is a SERB. We are all perfectly happy to bomb a country we know nothing about because our leaders feed us some crap about how good a thing it is and how the leader is so bad it's worth us causing a million 'ethnic albanians' to all become DP's overnight. But let's please not talk about it in the newsgroup lest it interfere with our hobbies.

This war stinks and we will all live to regret it.

1771. Spring Cleaning stuff

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-24 00:00:00 UTC
From: Bill <m6rf@yahoo.com>
Message-ID: <372274B1.51CA@yahoo.com>
Source record: 144782

.

I am doing my spring cleaning in the radio room, and I have the following items for sale. TERMS: The terms are, the first person with the money gets the item (sorry to have to do it this way, but in the past some people have not sent the checks that they promissed to). If need be I can accept Visa, MasterCard, and American Express and run it through the company account.

PRIORITY WILL BE GIVEN to those having any old Leica, Rollei, Alpa, or Voightlander camera equipment to trade. They will have first chance through midnight Monday April 26. However, you can put your name in anytime.

The prices are really pretty firm. All prices are plus shipping. I live in the Denver area (mountain time zone).

My phone number is: 303-674-0510
My e-mail address is: m6rf@yahoo.com

1) Yaesu FL2100B HF amplifier. 10 through 80 meters. Output is 1,200W pep, 1,000W CW, 600W AM. Virtually mint condition with manual. This you will need to pick up or if you are in the Denver area maybe I can deliver it. $350.

2) VoCom 100W 2 meter 12VDC amp. It requires 2 watts in to get the full 100W out. I have not had this on the air for at least 10 years, maybe more. I assume it still works. Mint condition with the manual. $30.

3) Shure 444 mic. Mint condition. Grey. $15.

4) MFJ model 901 antenna tuner. This is a 100W to 200W model for coax, wire, or balanced line inputs. Mint condition. $25.

5) Heath (you remember them) model IM-2400 digital frequency counter. 500Hz to 512MHz. Two time bases .1 sec and 1.0 sec. With the special antenna. Needs battery pack repair (AA type battery). Very nice counter. $25.

6) Brandes Navy Type. Matched tone. Head phones. These are early WWII or earlier (so they are at least 60 years-old). They have the cloth across the head bands. They are stamped "PAT. MAR 13 1923". They are in quite good condition. $25.

7) ICOM mobile hand mic. Dynamic Imp 600 ohms. Condition unknown. $5.

8) Kenwood mobile hand mic. Dymanic, Imp 500 ohms, "UP-DOWN" switches on top. Six pin connector. Mint condition, if not NEW. $10.

9) B&W model 593 antenna switch. This has three imputs. $15.

10) Daiwa model CS-201 antenna switch. This has two imputs. This can be wall mounted or has rubber feet for use on a desk. Virtually NEW. $15.

11) MFJ model 262; 1,000 dry dummy load. Mint. $10.

12) Two old radio handbooks. One is a 1972 ARRL soft cover good condition. The second is the 11th edition, Copyright 1947, of The Radio Handbook by Editors and Engineers, LTD. This is a hard cover book which is also in quite good condition. You get both for $35.

13) Pulser shortwave radio. This is the small portable type that will run on 110vac with a power adapter (included) or batteries (not included). It is about 7 1/4" by 4 1/2". Digital display, clock, AM, FM, SW1 band from 3.2 to 7.3MHz, SW2 band from 9.5 to 21.75MHz. $15.

14) Kamtronics Kam all mode converter for RTTY, CW, etc. For use with your computer or terminal and HF rig. Good condition. The last time I used it (maybe 10 years ago) it worked. $10.

15) Kenwood model SP-230 external speaker. This has a switch for two inputs, plus low, high1, and high2 filters. Mint. $40.

16) Yeasu MD-1 Dynamic desk mic. This has the UP-DOWN buttons, P.T.T. and LOCK switches. Plus three position tone switch and selectable imdenance of 600 ohms or 50K ohms. Mint. $40.

17) ICOM model IC-HM10, mobile mic. This has the UP-DOWM and search functions. Dynamic type. Absolutely NEW, factory boxed, still in plastic. $10.

18) Belden RG-8 coax. Belden number 8237. About 75 feet (that's a guess there is probably more) This is

brand new, low loss foam core with stranded center conductor. $35 (that's about .46 cents a foot).

19) 4 two meter Rubber Duck antennas. 4 1/2" long with a BNC connector. Brand NEW. $5 each or $15 for all 4.

20) Heath (you remember them) model GD-1B grid dip meter. This is a jewel. Its probably 1950s vintage TUBE TYPE, 115VAC genuine Heathkit. I have the coil box with ALL 5 COILS 37 to 100 MC, 14 to 37 MC, 2 to 5 MC, 5 to 15 MC, and 100 to 250 MC. The unit appears to be in working order, but I can not guarantee that. All things considered, this is in very good condition. The purple coil box is faded and water stained in spots. $50.

That is the list. I believe the amplifiers to be in good working order, but for obvious reasons I can not guarantee that.

73's,
Bill
K0OWO

It sent both. SOS had just come into effect as a distress call 1 April
1912; one of the two radio operators said to the other who was pounding
brass, "You might as well send SOS... it may be the last time we ever get to
send it." (Walter Lord, A NIGHT TO REMEMBER)

concerining the cw test, the end result is to show one can copy/send cw at what ever speed has been required, does it really matter how the info is put down on the answer sheet, either one can copy or not.....as far as the written test's go, I just recently in the last two months, went through the whole bit, as I let my extra ticket expire about ten years ago. ARRL likes to switch around the answers, but here if you know the question it does not matter what way the answers are arranged. What I found though, was that the W5YI group gets things to the fcc about a week faster than ARRL, still awaiting my extra to get on my ticket, when with W5 it would already be done.

Check out the new song, "I'm A Catholic Girl Of Course I Swallow!" It's an explicitly raunchy Techno/Dance spoof that has to be heard to be believed. Let's just say that once you hear it, you'll probably want it in your MP3 collection. This song is # 1 in Comedy with over 2,000 downloads a day, and our CD is a bestseller in the Top 10 at MP3.COM. Hear it on "Real Audio Instant Play", download the MP3, and listen to other very sick music and material from one of America's most bizarre new bands free at:

http://www.mp3.com/cockysticks

Warning: Strong language & content.

Source record: 144930

On 24 Apr 1999 13:01:50 GMT, shm144@aol.com (Shm144) (in <19990424090151.29838.00001036@ng100.aol.com>) wrote:

>Can someone please tell me or define a freebander I am new to amateur radio
>and have never heard this term

From http://rob.acol.com/~cb/freeband.html

"Freeband CB Radio is the use of frequencies or channels that are not designated to the CB Radio service for use as "private" channels or for attempting long distance contacts (DX). These freeband channels run from 26.000 MHz up to channel 1 (26.965 MHz) and from above channel 40 (27.405 MHz) to the edge of the 10 Meter ham band (28.000 MHz)."

There's also a handful of "A" channels between CB channels which most radios capable of so-called freebanding are capable using as well.

The reason so-called freebanding is popular with some CBers is because the CB 40 channels are almost unuseable due to the wide use and acceptance of modified CB radios, overpowered radios, and linears. There's been virtually no enforcement which 1) the din and flatus makes good people look for relief, and 2) blurs the distinction between legal/illegal. When 90% of the people on the radio are running "export" radios and power, and it's obvious the FCC knows about this, it's easy to believe there are none of the rules are really noteworthy.

I don't know why it is popular with some hams.

Enforcement seems to be increasing. I just hope it will go so far as to clean up CB which contributes to the problem. There seems to be a growing organization among CBers to press out even further:

http://home.fuse.net/rlgrenel/cbthreat2.htm

If the rules aren't going to be enforced, I actually think this is a good idea. Just enforcing it in freeband and not in CBRS itself will likely spur more people into the movement (IMO).

> >

Well, they banned guns in New York -and other places-, and
since that didn't solve the problem, now the effort is to
ban guns nationwide, *if* they can get it done, because they
believe that guns coming from out-of-state are the root of
the problem.

Then, when that doesn't work any better, because it
creates a black market and ready source of ca$h for
smugglers in the fashion of herion, cocaine etc, then the
push will be for a worldwide ban on weapons possession by
individuals - which is actually already underway within the
UN.

In a "free" society, there is only so much control that
can be exercised by any level of government - beyond that
point it is no longer free, but subject to the whim and
personal viewpoints of those individuals in power -at all
levels- at any time.

Another effect of a nationwide gun ban would be to assure
that only the criminal element would posses them. Currently,
a criminal never can be sure who might be a gun owner and
pose a threat to him. Such is usually avoided unless the
crook is abnormally stupid or under influence of some
illicit but ILLEGAL substance, which is common. Under a
total gun ban he really wouldn't need to worry much about it

since lawabiders wouldn't own guns.

It seems to always be the leftwingers who insist on complete control in the name of "freedom, protection and justice". Observe these terms closely, for definitions mean everything. There is a constant Utopian search for a perfect "system" which cannot exist within a human setting. Remember the USSR and "communism"?

If you were a Hitler, Stalin, Saddam Hussein, Milosovich, Mao etc what would YOU support in the way of gun control? In fact what DID all of them dictate within their own spheres of influence? Then consider that Washington, Jefferson, Madison etc. all strongly supported private ownership of weapons, and why they did.

It's easy to blame "guns" for debacles such as the school shooting tragedies- as well as less-publicised tragedies, and ignore the REAL problems. You don't see any criticism by the Administration of their Hollywood buddies who propagate the excessively violent "movies" and video games that engender similiar thoughts within malleable, insecure and active but undeveloped young minds, with such disasterous results. Invaribly these sources of violent extremism have been shown to be a factor in what we see on TV news. Is there an 'agenda' within this trend toward extreme violence in films/entertainment, or are they just following the profit motive and exercising their "Freedoms", too? For sure the Administration won't be anxious to determine a true answer. Or maybe they already know. Could they be a part of the problem?

I'm hearing from relatives in the military that important resources are being pulled worldwide and dedicated to the effort in the Balkans. Today our military has been downsized to alarming proportions, and the Balkan effort emphasizes our weaknesses. It is sasid that today there isn't a aircraft carrier presence in the Pacific. Two weeks ago, cruise missile stocks (conventional warhead) were down well below a total of 100 remaining, with none being built, no factories tooled up to make them and no plans to restock. By now there should be few left but the nukes, and you KNOW we won't use them. Their conversion to high explsoive warheads is said to take a year and cost as much as the original price.

Does anyone really believe that we will always be invulnerable to any sort of attack? Only the most optimistic or the most ill informed. Those who didn't study history or didn't learn anything from it.

What all this shows is that "superior" intelligence doesn't automatically equate to satisfactory problem solving, and that genius is often illogical in its application, based on human emotion instead of recognition of reality - and twisted by personal Agendas. This applies to the Code/No code controversy just as well.

1783. Re: Eliminate Geek Theory as Well as Morse Code; Focus on Operations

Newsgroup: rec.radio.amateur.misc

1. Require minimal Morse proficiency because if we don't know it, who the heck will? Maybe 10WPM max.

ANS: CW is an ITU requirement, therefore, has to be part of our licensing program. Quite probably the new standard in the US will be 5wpm.
---
4. Beef up operating practice to the point of expertise.[snip]This would include trunking systems, microwaves, satellites, spread-spectrum [snipped].

To Access Expanded Receive:

The AT-600 is already capable of wide-banded receive out of the box.
To widen coverage range even further turn the radio on and enter the
menu system. (To enter the menu hold down "F" and press the "0" key.)
hile in the menu system press the following sequence of numbers:
"1," "4," "6," "2," and "3." You do not need to be in any particular item
on the menu for this to work. After entering this sequence simply turn the
radio off and then back on. The receive range will now be greatly
expanded.

We have gotten a Overwhelming response to this Contest!!

THE WINNER IS:

WB2OTK!!!!!

We will have a Awards Ceremony tonite! Tune in to 3950KHZ at around 9:45PM EST time. K5BLB and K5ZU will sing "The PorkButt Song" to him in honor of this outstanding award!!!

Enjoy it Porky, it'll be the last award you ever get!

"Where's that big ol' PorkButt?"
"I want to see him get another NAL!"

1786. Geek Theory (different thread), Morse Code, and the New Guy

OK Hams, got my tech-plus ticket two weeks ago. Am trying to learn Geek Theory and don't find it in any of the books:
1) What is WACS, see a lot written about it when discussing radios?
2) What is surface mount when talking about rigs?
3) Are there any "geek" Elmers in AC909 that can help me build a QRP rig?

(snip) someone mentioned that I probably couldn't use Esperanto
> with anyone on the street. True, but that would also be the same with Finnish. Does that mean that I would be wasting my time learning Finnish?

To answer your question, you probably would be wasting your time
learning either if you're not going to use Esperanto, Finnish or any
other language on a regular basis.
These 2 cents from someone who was proficient in French, Spanish,
English, and esperanto (in the military). The latter wasn't quite
practical in Southeast Asia.

They are unlicensed operators, mostly CB'ers with one of the junk "10 meter"
rigs sold by Copper, etc. who use the frequencies between 11 and 10 meters
(27.410 - 27.995). Many of them are now venturing into the 10 meter ham band
to disrupt the licensed operators there.

Go to the ARRL.org site and see if you can order a ARRL Handbook.
Should be required for all new hams. There is a lot of good info in
it and a bunch over the heads of many.

Not sure abut the WACS right off. Could mean Worked All Continents,
or maybe you left out a leter and it is the newer bands becides 160,
80,40,15,10 meters. That would be 30,17 and 12 meters.

Surface mount is when the components don't have long wires that go
to the other side of the circuit board, but mount on one side of the
board and are soldered to that side.

As a matter of fact, yes, one of the two radio operators did survive, and helped to handle the distress-related traffic that was piling up on the rescue ship which held the survivors. He testified before board of inquiry which investigated the disaster. He went on to serve on another ship.

Radio history is as close as your local library.

> > >
> > BUT unless there is a total national
> > > ban on concealed weapons we can not stop criminals from getting guns and
cut
> > > down gun related killing and wounding in our cities.
> >

No ban would be 100% effective. I do have a suggestion that might do some
good. Why don't they get the private sector involved with a profit motive in
mind? All guns should be registered like all automobiles are. In order to
register a gun the owner should show proof of Weapon Insurance by a private
insurance company. Like automobiles, the insurance should cover the costs
that occur when the gun owner gets sued by victims (or their surviving
families) of any related "accidents" or theft. The weapons themselves should
be insured for theft...and in this way stolen weapons would be reported and
owners would tend to be more careful that their weapons don't get
stolen....same as cars. The insurance companies would have to be informed
when a weapon is sold or resold or even junked just like with cars. If the
risks of the guns getting stolen are small and if the risks of any related
accidents or crimes are small the insurance can be very cheap. If not...IMHO
too bad... The insurance companies will then have money to at least track the
resales of guns [in insurance company computer data bases] and this IMHO
might keep some of them out of the wrong hands. Guns get resold in some
states without any requirement to check the mental status or age of the
buyer. Even in states that prohibit such reselling, there is little
enforcement as the documentation of resales is often non-existant.
Semi-automatic and automatic weapons which are illeagal in some states and

according to some limited federal laws still seem to be available. Anyone who is found to be distributing such weapons should be treated at least as harshly as drug dealers are. As I stated in another post no measures can assure that people won't kill people with guns...BUT that does not mean we should do nothing. If we can have regulations that save only a few innocent lives then IMHO those regulations are well worth having and enforcing. If local governments can not enforce regulations maybe it is time for private insurance companies to get involved. There are regulations prohibiting hate mongering via Ham radio...but there are still hate mongers...Hams must also identify themselves with their call-letters on the air! Can you imagine how the Ham bands would be without any regulations?...Hmmm...I suppose it might be as bad as this NG is getting to be. PLEASE keep thinking, I never met a Ham I didn't like, Hams need more classes, Bob Wex w2ilp (Insure Licensed Pyromaniacs) -- .- -..- .. --

No, there should be no "beefing up" of tests either.
I'm having a hard enough time passing the General Test right now, I don't need
your help in screwing my over and making my odds less of getting my General License.

Bob,

They were in possession of two pistol grip shotguns, a semi-automatic AK-47 wannabe rifle, and a 9mm semi automatic pistol with approximately 100 rounds stored in additional pre-loaded magazines. (10 rounds divided into a hundred means about 10 extra magazines) They also had numerous homemade pipe bombs. Sounds like a lot, but we have to divide the weaponry by at least two persons. A typical drive-by shooting involves (less the bombs) more firepower than this.

Now, no argument here that these weapons were *more* than enough to cause *more* than enough heartache and destruction and I'm definitely not defending these two [enter your own descriptive adjective here], But I've seen it reported in a few other places (media) that they were heavily armed with automatic weapons. (just not accurate).

"Freebanding" or "Outbanding" refers to the illegal use of radio frequencies between 27.405Mhz (Citizens Band channel 40) and 28.000Mhz (the beginning of the 10-meter amateur radio band.) The individuals you hear operating here are doing so with either illegally modified Citizens Band radios or with amateur equipment which has been altered.

Regardless of the equipment used, operation on these frequencies is unlawful. In view of the recent and significant increase of enforcement efforts by the Federal Communications Commission against those who operate on these frequencies, one might rightfully conclude that such operation is not a wise activity to engage in.

Hi all,

I'm sure there must be some truck driving hams out here :))

I'll be going back into cross country trucking pretty soon, and since my wife and myself both have our amateur licenses, I was wondering if there is some reliable method of keeping in contact with each other via ham radio communications.

Cell phones charges would probably cost us a couple hundred bucks a month easily - not an option. The various 10-10 numbers are pretty cheap nowadays, but that would involve (first) finding a phone, stopping the truck (miles are money), etc., not really my first choice if I can avoid it.

Any ideas or suggestions? I'll make whatever initial investment necessary for good *reliable* (any time of the day) communications with the family...

Thanks for any help...

John

I don't know if he lied to you or not. But, during the so-called
"assault weapon" ban debate of '93 and '94, I continually watched NBC
report on the progress of this legislation. They always showed film
clips of people shooting machine guns when the legislation didn't
mention such weapons and neither did the final ban affect them.

It seems that "freebanders" have more access to equipment than do most hams (who would be willing to pay out huge $$$ for aircraft capable tranceivers?). In the last 20 years have I ever run across an idiot in ham radio (3 of them) and in all cases, they were jailed and fined for their actions (2 teens and a TV repair shop technician).

Hello Fellow ham's. I just recently bought a new hand held and since I
am a new HAM I was wondering if anyone out there would be willing to
help me out? I am in the southern California area and I need a really
quick lesson in using repeaters. I understand that input and output are
located on 2 different freqs? If you are in the same area would you be
willing to e-mail me with steps for locating and using an open repeater?
Or if you live some where else i would also appreciate a general step by
step process for accessing and transmitting on a repeater. I just
recently received my license and I have not transmitted once yet. I need
a little help here. I would appreciate anything. Thank you and 73's to
all...
you can e-mail me at jmerfale@engr.csulb.edu

1824. FS: NC-125 parts, case, knobs

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-24 00:00:00 UTC
From: k6sde@my-dejanews.com
Message-ID: <7frd2p$4ve$1@nnrp1.dejanews.com>
Source record: 144986

I have completed restoring my NC-125 and have a parts unit from which I'd sell parts to get your NC-125 back working. I have NO silver bar knobs (had to buy the parts receiver to get them) but have the other knobs. Chassis parts, etc. are available. The parts unit has had a lot of "modifying" done to it but most everything is there.

The cabinet sheet metal is in pretty good shape but would need a repainting to be nice. (I need
to paint the one I'm keeping also!) It's not dented or bent but has the usual scrapes and
scratches on it.

Let me know what you're looking for and I'll see if I have it.

A few of the parts MAY be usable on NC-173/183 series receivers but I'm not positive about
that. It seems as though I've seen some of those receivers with the same S-meter for example.

Let's keep the NC-125 working!!!!

WASHINGTON (AP) The Federal Aviation Administration is investigating reports someone broke into the local air traffic control frequency at Ronald Reagan Washington National Airport late Thursday and told an aircraft to divert its landing.

Someone broke into the frequency at about 9:30 p.m. and said, "USAir divert, divert, divert your landing,'' according to WUSA-TV, which quoted several sources in its report.

The pilot of a United Airlines aircraft, on its final approach to Reagan National, reportedly contacted the tower to find out what to do and was told to complete the approach, the station reported.

A US Airways pilot further back also called the tower and was told to circle the airport. Both planes landed safely.

Jim Peters, an FAA spokesman, told The Associated Press the incident is under investigation but would not discuss the details.

I recommend ARRL. W5YI exams contain too many errors. When I sat for
the Extra written, it contained a withdrawn question, and the code
code test contained a question which had the roles of the sender
and the listener reversed (which really didn't matter since I
had one-minute of error-free copy).

It was a nice gesture of the W5YI group to send me certificates for
passing their Advanced and Extra exams, but even those contained spelling
errors.

I have several VHF and UHF Motorola Maxar radios for sale.

The VHF radios are 25 watt radios. All radios are two (2) channels; and come complete with radio, mic, heavy duty locking bracket, and power cord.

You will need to purchase the crystals for your favorite frequencies, and have the radios tuned to your specs.

Radios do include a PL reed, already installed.

VHF radios are $25.00 + $10.00 shipping.
UHF radios are $35.00 + $10.00 shipping.

Shipping is USPS Priority Mail. Radios are in great condition.

Going fast, but still several left. Respond to hutch@jerrylee.com for immediate shipment.

Thanks,

Eric - N8XHP

Wrong! There is all kinds of software for the PC with SoundBlaster for
decodeing CW.

I see no need to know CW. I think all the old coders are just scared
that if they drop the code the will come out with a more diffcult exam
for HF that you guys can't pass.

Just my 2 cents worth.

THERE IS NOTHING NICE ABOUT CW. iT IS AN ANTIQUATED TECHNOLOGY THAT IS
ANALOGOUS TO A MODEL T FORD. IT HAD IT'S TIME AND NOW IT BELONGS IN A
MUSEUM.

IT IS NOTHING MORE THAN A HAZING RITUAL.

I WALKED A MILE TO SCHOOL BAREFOOT IN 2 FEET OF SNOW, AND YOU MUST DO
THE SAME
TO BE ACCEPTED!

The problem is, is the old HAMS think "Well, we had to go through hell to
become a HAM, so should everyone else".
This sums up why alot of people aren't becoming HAMS as indeed alot of requirements
are very outdated.

> Computers are becoming more and more a fact of life.

That's all I hear HAM's talking about is their web page, e-mail etc, other than
simple signal strenth reports.
Funny as they could simply get on the Internet to talk about the internet. ;)
I do see great uses for HAMS though and yes, the internet as a whole might be nuke proof
but alot of good that serves when your ISP is down and you can't even get onto the Internet
to start
with.

1842. Re: ICOM IC-751 ACCESSORY PLUG PINOUT

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-24 00:00:00 UTC
From: Peter Fournia <glide@frontiernet.net>
Message-ID: <37210F2B.A0B15C2D@frontiernet.net>
Source record: 145004

Various functions are available through the accessory socket such as modulation output, receiver output, T/R changeover, and so forth. Pin #1 is in the lower left corner with pins 2,3,4 above it. Pin 24 is in the upper right corner viewed looking at the back of the radio.

1. Output from the squelch control stage. (+8v when the squelch is on)
2. 13.8 v dc conjunction with the power switch operation.
3. Connected to push to talk, T/R changeover switch. When grounded, the set operates in the transmit mode.
4. Output from the receiver detector stage. Fixed output regardless of AF output or AF gain.
5. Output from Transmitter MIC amplifier stage. (Inputs for MIC gain control stage)
6. 8v dc available when transmitting. (relay can not be directly actuated. Max. ma)
7. Input to external ALC voltage.
8. Ground
9. Input to RTTY keying (MARK : high level, SPACE: low level)
10. NC
11. Input to transveterter control. When 8 v dc is applied, the set can operate with a transverter.
12. Output reference voltage for band switching.
13. Out for external band switching.
14-24. NC

Directory from the manual.

Mozilla was Netscape's code name for Netscape during early development. It's funny how the recent pace of change makes this seem almost ancient, archaic, irrelevant history. In fact, only five years has passed. But darned if I can remember the freebie browser that preceded Netscape, though.

Michael.

AF2Y "Doc-Boy" Song...

(sung to the theme of "The Beverly Hillbillies")

Let me tell ya little story,
'bout a Jew named Doc,
a stingy, cheap, tight-fisted guy,
he never was in "hock".

And then one day,
Doc was jammin' on the air,
so Riley sent him notice,
and told him he shouldn't dare...

interfer that is. Willfully. With malicious intent.

So the next thing ya know,
Doc's a headin' for the 'net,
thinks he'll do the same bullshit,
some do on twenty yet,

but Doc will get a big surprise,
when folks begin to flame,
for then he'll have to realize,
Usenet's really not the same.

Well there is ONE thing, it won't be a requirement to get a Ham license
much longer. That's nice.

Why do thousands of people continue to ride horses or bikes as their primary transportation? Same reason. Only difference, Knowing how to ride a horse or bike is not a requirement to get an automobile license.

You might be surprised to learn
> that many amateurs enjoy using cw.

You might be surprised to learn that many amateurs enjoy using microphones too.

The question should be, what would a ship use TODAY, not in 1912.

I'm not a code hater, Dick, I'm a code lover. CW is my favorite mode.
But I've got better sense than to rely on CW for emergencies. If I
ever use CW for an emergency for the entire rest of my life, I promise
to mail you a $1000 check and eat crow for a week.

Sir, this is the first thing that you have written that I have agreed
with. The Pro-code crowd seems to go rather silent when this fact is
mentioned so I guess they must realize it. The code requirement is on
it's way out. BTW, I am against the code requirement on principal alone
as I have not been on the air in a matter of years and probably will not
go back to it.

```
The following is a summary of Rogue Cancellations of Usenet posts in
the rec.radio.amateur.misc newsgroup from 04/19/99 thru 04/23/99

All of the Rogue Cancels are originating from Bellsouth Internet
Services. If one of your articles was Cancelled by this Rogue
Canceller, then I suggest you send a complaint to the Abuse Dept at
Bellsouth at abuse@bellsouth.net along with the headers to one of
the Rogue Cancels listed below.

This is the break down of the articles that were cancelled:

cschwartzbard@my-dejanews.com 1 Article Cancelled
NCC-1701-B@Mindspring.Com 2 Articles Cancelled
radiosigs@aol.com 22 Articles Cancelled
w4nti@my-dejanews.com 1 Article Cancelled

Interesting! So did you learn Esperanto as the "Aggressor Language"?

Any regulation can be better than no regulation but no regulation can be 100% efficient. Please read my other replies on this thread. That goes for gun control, drug control, AND Ham Radio hate monger control. The subjects are all important and maybe all related because we must all use our self-controlled common sense as parents...as teachers...and as HAMS....to place things in the proper perspective and if we must regulate anything let us agree among ourselves to regulate in the right direction. As citizens of the USA we all deserve each others respect. We have nothing to hate but hate itself. PLEASE keep thinking, I never met a Ham I didn't like, BE HUMAN DON'T HATE... Hams need more classes, Bob Wex w2ilp (I Like Practicallity) -- .- -..- .. --

OK Arnie on your more accurate report. It agrees with what I have read today. I'm no expert on weaponry...and I was wrong about the automatic weapon allegation...but the semi-automatic AK-47 seems to me not exactly a sportsman's weapon...I could be wrong...But is that a legal weapon for anyone to sell (or give) to a person who is less than 18 years old and who has previously been convicted of a minor hate crime? As in a previous case the parents involved are well educated and even educators themselves...It is ironic that such people are unable to admit that their own children may be dangerous to society as well to as themselves. Intelligent people often freely speak their minds in front of their own children (which can be a big mistake) and sometimes this can make their children (who are not mature enough to put matters in the proper perspective) hateful of society. I know how it can be from my own experience...but I am not so proud that I can not realize my own responsibilities as a parent and as a citizen. Enuf sed. Please read my other posts in this thread on this subject.

Regards,

Bob
W2ILP

I reply in all cases with no threats...no flames...and respect for the opinions of others... because I never met a Ham I didn't like and I'm not looking for one. I also admit that the information that I receive from any media is no different than the information that anyone else may receive and the opinions expressed here are only those of myself (W2ILP) and no organizations which I may be a member of. I am not an agent of any political, religious, ethnc, or nationalistic group...I am only an independent US citizen and a licensed Ham Radio operator and I like to think for myself.

Cecil,

The weapon in question was a Tec-9, which is a 9mm semi-automatic pistol made to look like a sub machine gun. (Dan is not a trained investigator, so an honest mistake maybe)This by-the-way is one of the all time favorites of the street gangs. I've noticed this a lot in the media (Dan Rather included), a pattern of calling semi-automatic pistols and rifles automatic because they have the "look" of automatic weapons. It is also common to call anything akin to a rifle an "assault weapon".

Don't get me wrong here Cecil, I am not an advocate of, nor do I own any semi-automatic "assault style" weapons. Clearly, they were designed with only one function in mind. (generally wouldn't go duck hunting with a Mac-10). But I did want to clarify the difference.

Regards,

Arnie -

You need to step back so as to get a global view of why the code requirement exists for HF privileges. RF at HF respects no boundaries, and as communicators first and foremost, hams the world over should have at least one mode in common. At present, there is only one mode all the world's HF-licensed amateurs hold in common: CW. Whether one chooses to use it or not does not matter; if the need arises he has it available to him (maybe at a slower speed than when he was first licensed!). The phone modes won't work as an international mode due to differences in languages, but there are sufficient code pro-signs so that a meaningful QSO can extend across language barriers. A digital mode could become the international standard, but until such time that every ham worldwide is so equipped and/or has the ability to build and self-maintain such equipment, CW will remain the common mode. The ITU has this global view while many individuals have only an insular nearsightedness - their own personal goals out-weigh those of the global amateur community.

(Daily worldwide comms don't normally take place above 50 MHz, so a common mode in that region can be chosen on a national level; for us it's of course FM phone.)

Dear friends,

my name is Nick Hacko, YU7XX and VK2ICV / VK9LX.

Five weeks ago, US and NATO started aggression on my
home country, Yugoslavia. Since today, I was trying to force
myself that this is not my business at all.
But this morning I've received an e-mail form my brother,
Branislav Hacko (Mr.sci.med., YZ7DX) telling me that
his 6 years old boy is wearing his snorkeling mask
"... because he believe if they bomb petrochemical plant
nearby he would be protected!"

Five weeks ago, this would be just sarcastic joke.
Today, it's their reality. Hanibal ante portas.
Barbarians are at our gates. They are using their largest
and smartest bombs to destroy our schools and hospitals, our
museums and ancient monasteries, our heating plants
and food factories, our bridges and dams.
"In the name of democracy and humanity ", of course.

As a Yugoslav and Australian, I deeply sympathize with ALL innocent
people who suffer and this is my modest contribution to peace and
spreading of the truth about Yugoslavia's innocence,
in the moment when the world's biggest powers have born
down on it. I owe this to my family, friends,
my 2 yr. old son and myself.

You can laugh on this letter or you can go and have a good look in the
mirror and ask your self 'what am I doing to stop this war?'

It's up to YOU.

Nick Hacko

>sportsman's weapon...

The 2nd amendment's not about hunting and the only thing about the AK
(or other so-called "assault weapons") that makes it not-so-good as a
hunting rifle is the high-capacity magazine. Plug a 5-round mag in
and it's no different than a Mini-14 and a number of .30 cal firearms
(the 7.62x39 round being only moderatly smaller than the .308).
Pre-load a score of 5-round mags and you can rack off as many rounds
just about as quickly as if you had a couple of 30-round mags. Its
menacing looks set it apart more than anything else.

>I could be wrong...But is that a legal weapon for anyone
>to sell (or give) to a person who is less than 18 years old and who has
>previously been convicted of a minor hate crime?

Any firearm is prohibited from being sold to a minor. I'm not sure
you can "give" a weapon to a child except to the degree the child
can't use it without parental or adult supervision. These laws vary
from state to state, but you can't sell.

>As in a previous case the
>parents involved are well educated and even educators themselves...It is
>ironic that such people are unable to admit that their own children may be
>dangerous to society as well to as themselves.

Yes. The kid in Springfield Oregon took a gun to school just days
before the shooting. Instant violation of federal law if not state
law as well. He was turned over to his parents -- whom he proceeded
to murder and then come back to school with guns.

I've heard regarding Littleton that one of the boys pulled a gun on
some jocks and it went unreported. Supposedly the pair also did a
movie for a school project where they depicted what they ended up
doing. I dont' know if this is true. Someone told me they'd seen it
on teevee. Makes me skeptical, but it sounds bizarre enough to be
true.

>As a Yugoslav and Australian, I deeply sympathize with ALL innocent
>people who suffer

Perhaps we can discuss this in detail, later. Right now, I am deeply disturbed by a newswire story outling the story (told by the lone survivor) of 23 men herded into a shed where they pleaded for their lives for 45 minutes before being blasted away with machine guns.

Care to read some of what they said, just before they were murdered? You never will forget it.....

For weeks, I've ignored this situation. "Not my fight," I said. But reading this really got my attention. It could happen anywhere. Who else shall we "cleanse"? Whites? Blacks? Christians? Yugoslav men who have migrated to Australia? Jews? Hmmm, forget the Jews. We already picked on six million of them.

I deeply regret what is happening in and to your native country. Really, I do. I know the "smart" bombs sometimes take out innocent civilians. But you're wrong about two things. First, it is not the "US and NATO" attacking your country. It is NATO. As a signing country, the US participates. But so do all the other countries--regardless of whose planes are in the air. NATO is the COLLECTION of countries. Please keep that in mind.

Second, at the cost of a million dollars EACH, and with inventory running low, don't think that smart bombs are being directed toward schools, hospitals, museums, and ancient monasteries. Highly-charged, emotional writing won't bring a solution to this.

I pray that your family, including YZ7DX, will be spared any personal loss during this conflict and that it can be resolved quickly. God Bless.....

Bob,

I'll reply to you and comment on Mark's comments. No, it's not a sportsman's weapon and was never designed to be one. It's primary function in life is to kill people. However, Mark's comments concerning the high capacity is true, and it could easily be used in that manner if the the capacity was lowered. (general standard for hunting rifles is 3 -5 round magazines)

It is a violation of Federal law to sell a weapon of this type to a minor (under 21). Mere possession of the weapon is also a violation.

Mark is also absolutely correct when he talks about the mini 14. A similar weapon was banned during the anti-gun legislation because it "looked" like an assault rifle. Fired the exact same round however. So why wasn't the mini-14 banned also? I've asked that question a number of times.

Do we all remember the FBI shoot out in Florida? The FBI members who were killed, were shot with a mini-14. (this is a fairly high powered carbine for those who aren't familiar with it)

Hope I've answered your questions ...

Regards,

Arnie -

> UN.

Yep...I'm sure the black market, as it may be called, is already in place as well as in operation...but that has nothing to do with laws that can make for punishment in the even rare cases where they might be enforced. Believe it or not some other nations who ban guns are asking the USA to be stricter.

>
> In a "free" society, there is only so much control that
> can be exercised by any level of government - beyond that

> personal viewpoints of those individuals in power -at all
> levels- at any time.

In a free society all citizens have a right to life, liberty and the pursuit of happiness and freedom from the fear of unregulated weapons in the hands of hate mongers. You are correct in saying that no contrrol can be fully efficient BUT we still need some controls. No society is really completely "free" because in all societies some people are for some reasons freer than others...be it economical, political, or whatever reasons. Why is O.J. Simpson free? Why are others in jail who may be innocent but had dumb lawyers? No system is perfect.

> Another effect of a nationwide gun ban would be to assure
> that only the criminal element would posses them.

Are High School students part of your "criminal element"?...BTW who are the "criminal element" ? IMHO there is only a "criminal element" in the minds of bigoted haters who can perceive of some "criminal element" boggiemen who has some fictious ethinisity, race or religion. IMHO criminals are individuals who can not be identified by solely being of any race, religion, creed, etc. There are good and bad people in all groupings...The "mafia" is not all Italian,etc.

> Currently,
> a criminal never can be sure who might be a gun owner and
> pose a threat to him.

So a criminal might want to kill anybody who might be able to draw a gun faster than he thinks he can...Instead of risking unarmed. Your logic makes no sense and only can lead to living in an armed camp where everyone feels he must be armed because everyone else is...and then at the slightest provocation...maybe a family feud...maybe a lover's quarrel...maybe a teachers repremand...off go the loaded and waiting weapons...UGH...We don't need guns to be ever present. Some of us may neecd to let off steam without the ability of reaching for a weapon that can be used to inflict multiple casualties in short order.

But a maniac schitsophrenic may not care about any threat to his life...he may be suicidal as were two of those high school students!

> Such is usually avoided unless the
> crook is abnormally stupid or under influence of some
> illicit but ILLEGAL substance, which is common. Under a
> total gun ban he really wouldn't need to worry much about it
> since lawabiders wouldn't own guns.

People who kill are neither necessarily stupid nor logical nor drugged. I would suggest that you take a course in abnormal behavior. If only a few didn't own guns and it saved only a few lives I would be for making guns a lot harder to own. There are bootlegger Hams but that does not mean that we should not make people who want to be licensed be licensed without any examinations. It must be difficult for minors and previously convicted criminals to obtain guns and maybe even a little harder for anyone to obtain guns. Laws are weak...One law said that a person could only buy one gun per month...Heck in several years he or she could build an arsenal. Does any individual need that many guns?

> It seems to always be the leftwingers who insist on
> complete control in the name of "freedom, protection and
> justice". Observe these terms closely, for definitions mean
> everything. There is a constant Utopian search for a perfect
> "system" which cannot exist within a human setting. Remember
> the USSR and "communism"?

Left wingers often are libertarians who want no controls...especially no controls from affluent capitalists...You are a victim of old propaganda...which is no longer popular because... Communism and Marxist Socialism doesn't work and they are different an now unpopular ECONOMIC systems...even in modern China...This has very little to do with what we are discussing here. Right wing capitalists have a right to protection of their own lives and propertties in our society (The right to own and protect property is certainly a right wing right) and I for one believe that that is an important right that has as much priority as any left wing pinko's assumed rights...No class of people and no individuals should have to fear that weapons may be in the hands of anarchists or children or nuts who have no political persuasion other than Hate. The nuts who are blinded by ignorant hate are neither to be associated with left or right wings. They are a threat to all wings. There is no entirely perfect Utopia. We need laws and law enforcers... but no laws or law enforcers can be entirely efficient nor can they avoid taking away some of the assumed rights of the public. Police have a right to search our vehicles without a formal warrent...Airline security agents have a right to look in our bags..They can search mine because I carry no drugs..no arms...and no stollen goods. They can finger print me and take my DNA...I have nothing to fear because I am not a criminal...IMHO those INDIVIDUALS who fear that their rights may be relinquished may be the criminals (but not any mythological "criminal element"). IMHO People who fear to identify may always be suspects.

> If you were a Hitler, Stalin, Saddam Hussein, Milosovich,
> Mao etc what would YOU support in the way of gun control?

For who? Your own armies? Your enemies? Internal rebels? This has nothing to do with gun control internal to a nation at peace. Obedience to authority does mean that you drop your guns when your nation officially surrenders (as all obedient Japanese did when they lost WW2)...This is the only good argument against gun control that I saddly admit to....Because if some nation won a war against the USA and we surrendered...I dunno if it would exactly be easy to occupy Texas. (:=))

> In fact what DID all of them dictate within their own
> spheres of influence?

Heck I wouldn't mind if Hitler collected all Jewish owned guns. It was the Jewish skins that were made into lampshades that enoyed me. Ask yourself what spark started WW1 in Europe? It was one extremest with a gun. Before WW2..Another gun nut, who happened to be a Jew, caused Germans to reply with the famous "Crystal Nacht" which destroyed Jewish property and started the mass persecution of German Jews.

>Then consider that Washington,
> Jefferson, Madison etc. all strongly supported private
> ownership of weapons, and why they did.

Yep and they "controlled" the Native American Indians and Black slaves who were not as well armed and they planted marajawana and used out houses...So what has that to do with today's society?

> It's easy to blame "guns" for debacles such as the school
> shooting tragedies- as well as less-publicised tragedies,

> the Administration of their Hollywood buddies who propagate
> the excessively violent "movies" and video games that
> engender similiar thoughts within malleable, insecure and
> active but undeveloped young minds, with such disasterous
> results.

I am not defending the movies, the TV, or the horror video games...BUT IMHO they alone do not make criminals any more than pornography makes sex offenders. There is a big jump between fantasy and reality in normal minds...Sick minds do not need inspiration from media...This has beeen accepted fact from studying the case histories of real criminals.

> Invaribly these sources of violent extremism have
> been shown to be a factor in what we see on TV news. Is
> there an 'agenda' within this trend toward extreme violence

> profit motive and exercising their "Freedoms", too? For sure
> the Administration won't be anxious to determine a true
> answer. Or maybe they already know. Could they be a part of
> the problem?

The main factor is money...People supply what the public seems to want to pay for and the public does often prefer sex and violence because that propensity exists in the hormones of most normal people...BUT most normal people can handle the difference between entertainment, curiosity, self indulged voyerism and criminal hate behavior.

>

> price.

Yep..This will give business to our military industrial complex. This will reduce our monetary surplus...This will further threaten our social security funds and our health care funds...This will prevent a tax cut or in fact increase our tax...This may force us to again draft people into military service. Hmmm...We can blame it all on Slobodan Milosivic..or can we? Worst of all this may threaten the lives of your family and/or friends in the military services because where there is war or conflict, more often than not there is death on all sides. Let us all hope that this Balkan conflict is ended soon.

> Does anyone really believe that we will always be
> invulnerable to any sort of attack? Only the most optimistic
> or the most ill informed. Those who didn't study history or
> didn't learn anything from it.

We will always need to prepare to defend ourselves.. more so if our leaders plan to police the world. The fall of the USSR had given some of us hope that the world could be rational enough to live in peace...BUT now we see that even leaders of small nations can cause major troubles...If I was president I'd try to humor them instead of bombing their citizens...but that's me...and it wouldn't sell any new bombers.

> What all this shows is that "superior" intelligence doesn't
> automatically equate to satisfactory problem solving, and
> that genius is often illogical in its application,
Whew...That could be a paradox!...If genius is illogical maybe "Ignorance is Strength", as George Orwell had Big Brother say in "1984".
>based on
> human emotion instead of recognition of reality

Like ignorant hate??? Like the fear of some paranoids which can lead to unreasonable hate ...and even the murder of innocent people.
> - and
> twisted by personal Agendas. This applies to the Code/No
> code controversy just as well.

Welll...I don't think anyone got shot over the Code/No Code controversy yet. I must admit that by being a Mugwump I'm trying to minimize my risk. (;=)) There is no "superior" intelligence. Man has evolved as the creature with the most ability to control the destiny of the Earth...even if man destroys it with nuclear weaponry...BUT true intelligence is not IQ alone,.It is basically the ability to survive... and man can only survive in the modern world if man is willing to compromise without making threats of bombs and

wars...without hate producing exagerated propaganda...without extremism...without jingoism.. True you can not easily negotiate with a mad-men BUT to survive you must learn how to do just that!...Because in every war there are no winners. PLEASE keep thinking, Collect stamps, collect QSL cards, collect telegraph keys...but PLEASE don't collect guns...BUT if you must... Lock them up so that nobody else can use them in a fit of anger. Hams need more license classes, I never met a Ham I didn't like, Bob Wex w2ilp (Identify Loose Pistols) and check your guns at the door. -- .- -..- ..

> "system" which cannot exist within a human setting. Remember
> the USSR and "communism"?

Left wingers often are libertarians who want no controls...especially no controls from affluent capitalists...You are a victim of old propaganda...which is no longer popular because... Communism and Marxist Socialism doesn't work and they are different an now unpopular ECONOMIC systems...even in modern China...This has very little to do with what we are discussing here. Right wing capitalists have a right to protection of their own lives and propertties in our society (The right to own and protect property is certainly a right wing right) and I for one believe that that is an important right that has as much priority as any left wing pinko's assumed rights...No class of people and no individuals should have to fear that weapons may be in the hands of anarchists or children or nuts who have no political persuasion other than Hate. The nuts who are blinded by ignorant hate are neither to be associated with left or right wings. They are a threat to all wings. There is no entirely perfect Utopia. We need laws and law enforcers... but no laws or law enforcers can be entirely efficient nor can they avoid taking away some of the assumed rights of the public. Police have a right to search our vehicles without a formal warrent...Airline security agents have a right to look in our bags..They can search mine because I carry no drugs..no arms...and no stollen goods. They can finger print me and take my DNA...I have nothing to fear because I am not a criminal...IMHO those INDIVIDUALS who fear that their rights may be relinquished may be the criminals (but not any mythological "criminal element"). IMHO People who fear to identify may always be suspects.

> If you were a Hitler, Stalin, Saddam Hussein, Milosovich,
> Mao etc what would YOU support in the way of gun control?

For who? Your own armies? Your enemies? Internal rebels? This has nothing to do with gun control internal to a nation at peace. Obedience to authority does mean that you drop your guns when your nation officially surrenders (as all obedient Japanese did when they lost WW2)...This is the only good argument against gun control that I saddly admit to....Because if some nation won a war against the USA and we surrendered...I dunno if it would exactly be easy to occupy Texas. (:=))

> In fact what DID all of them dictate within their own
> spheres of influence?

Heck I wouldn't mind if Hitler collected all Jewish owned guns. It was the Jewish skins that were made into lampshades that enoyed me. Ask yourself what spark started WW1 in Europe? It was one extremest with a gun. Before WW2..Another gun nut, who happened to be a Jew, caused Germans to reply with the famous "Crystal Nacht" which destroyed Jewish property and started the mass persecution of German Jews.

>Then consider that Washington,
> Jefferson, Madison etc. all strongly supported private
> ownership of weapons, and why they did.

Yep and they "controlled" the Native American Indians and Black slaves who were not as well armed and they planted marajawana and used out houses...So what has that to do with today's society?

> It's easy to blame "guns" for debacles such as the school
> shooting tragedies- as well as less-publicised tragedies,
> and ignore the REAL problems. You don't see any criticism by
> the Administration of their Hollywood buddies who propagate
> the excessively violent "movies" and video games that
> engender similiar thoughts within malleable, insecure and
> active but undeveloped young minds, with such disasterous
> results.

I am not defending the movies, the TV, or the horror video games...BUT IMHO they alone do not make criminals any more than pornography makes sex offenders. There is a big jump between fantasy and reality in normal minds...Sick minds do not need inspiration from media...This has beeen accepted fact from studying the case histories of real criminals.

> Invaribly these sources of violent extremism have
> been shown to be a factor in what we see on TV news. Is
> there an 'agenda' within this trend toward extreme violence

> profit motive and exercising their "Freedoms", too? For sure
> the Administration won't be anxious to determine a true
> answer. Or maybe they already know. Could they be a part of
> the problem?

The main factor is money...People supply what the public seems to want to pay for and the public does often prefer sex and violence because that propensity exists in the hormones of most normal people...BUT most normal people can handle the difference between entertainment, curiosity, self indulged voyerism and criminal hate behavior.

>

> is said to take a year and cost as much as the original
> price.

Yep..This will give business to our military industrial complex. This will reduce our monetary surplus...This will further threaten our social security funds and our health care funds...This will prevent a tax cut or in fact increase our tax...This may force us to again draft people into military service. Hmmm...We can blame it all on Slobodan Milosivic..or can we? Worst of all this may threaten the lives of your family and/or friends in the military services because where there is war or conflict, more often than not there is death on all sides. Let us all hope that this Balkan conflict is ended soon.

> Does anyone really believe that we will always be
> invulnerable to any sort of attack? Only the most optimistic
> or the most ill informed. Those who didn't study history or
> didn't learn anything from it.

We will always need to prepare to defend ourselves.. more so if our leaders plan to police the world. The fall of the USSR had given some of us hope that the world could be rational enough to live in peace...BUT now we see that even leaders of small nations can cause major troubles...If I was president I'd try to humor them instead of bombing their citizens...but that's me...and it wouldn't sell any new bombers.

> What all this shows is that "superior" intelligence doesn't
> automatically equate to satisfactory problem solving, and
> that genius is often illogical in its application,
Whew...That could be a paradox!...If genius is illogical maybe "Ignorance is Strength", as George Orwell had Big Brother say in "1984".
>based on
> human emotion instead of recognition of reality

Like ignorant hate??? Like the fear of some paranoids which can lead to unreasonable hate ...and even the murder of innocent people.
> - and
> twisted by personal Agendas. This applies to the Code/No
> code controversy just as well.

Welll...I don't think anyone got shot over the Code/No Code controversy yet. I must admit that by being a Mugwump I'm trying to minimize my risk. (;=)) There is no "superior" intelligence. Man has evolved as the creature with the most ability to control the destiny of the Earth...even if man destroys it with nuclear weaponry...BUT true intelligence is not IQ alone,.It is basically the ability to survive... and man can only survive in the modern world if man is willing to compromise without making threats of bombs and

wars...without hate producing exagerated propaganda...without extremism...without jingoism.. True you can not easily negotiate with a mad-men BUT to survive you must learn how to do just that!...Because in every war there are no winners. PLEASE keep thinking, Collect stamps, collect QSL cards, collect telegraph keys...but PLEASE don't collect guns...BUT if you must... Lock them up so that nobody else can use them in a fit of anger. Hams need more license classes, I never met a Ham I didn't like, Bob Wex w2ilp (Identify Loose Pistols) and check your guns at the door. -- .- -..- ..

>mini-14 banned also? I've asked that question a number of times.

The mini-30 fires the same round (7.62x39). The mini-14 fires the
.223 (5.56). Neither were banned, just the future production or
import of <10 round magazines for those guns. The reason these guns
weren't banned is that they didn't have the various _cosmetic_
features of other guns (bayonette lug, pistol grip, ability to accept
a flash supressor). Such features might offend the senses of many,
but they're not exactly dangerous or a societal problem.

At the time the so-called "assault weapons" were banned, they
accounted for 0-3% of police confiscation stocks. In other words,
they weren't the choice of criminals any more than other guns (3%
being the import and manufacturing rate for these guns in comparison
to all the others). It was really a very poor expenditure of
political and public resources if the goal was to reduce gun crime.
It was an excellent expenditure if the goal was incrementalism.

The AKS-47 was banned in 1989 by George Bush's Executive Order import
ban (a brian fart of the then-Drug Czar William Bennet). The
following year the gun was redesigned into the MAK-90 and came with a
thumbhole stock, bayonette lug milled off, and flash supressor threads
milled off. It also came with a 5-round magazine and thus could be
called a "sporter." Clinton banned all guns and ammo from China via
an Executive Order (similar to Bush's) six months before the
legislative ban occured.

If it hadn't been for this Executive Order, chances are the MAK-90
would have been modified yet again and come into the country. The
AR-15 (semiauto clone of the M-16 has been thusly modified and
continues to be sold). It's nothing to really get excited about since
this has always been cosmetics and the bans simply push the guns
cosmetically in a different direction.

One thing I found very amusing in all of this is that when Bush banned
guns the conservatives kind of brushed their hands and said, "well,
what can we do." When Clinton did the same thing four years later you
would have thought it was the end of the world.

The gun issue is, unfortunately, largely partisan, emotional and entirely irrational.

Yep...That shows that this has absolutely nothing to do with being Jewish. Charlton Heston is a Jew who is president of the NRA...and Barbra Streisand is a Jew who is fighting for stricter gun control...Many other Jews are playing it safe and not expressing their opinions. Most Jews who own guns are afraid to admit they are afraid and the ones who don't own guns are afraid to admit that they aren't afraid. At any rate if non-Jewish people think that Jews own guns it will be good for gun sales...Same thing if Non-Jewish people think that Jews don't own guns. Yep.. You don't have to be Jewish to get involved with any side of any debate...Some Jews are strongly for CW exams. Some Jews are strongly against CW exams. Not me...I'm a mugwump on that issue BUT I'm against any no-tech-tech class of non-real hams who could infiltrate our hobby and create Citizen's MultiBand (CMB)....and debate about "Jewish racists" and guns instead of Swiss watchmaker advertisements! 73, Bob Wex w2ilp BTW...I don't think that Moses was an Amateur...but he was sort of a Ham communicator...because he RELAYED the ten commandments to his people.

Mark,

Not to carry this thread on forever, but there was a weapon banned that used the same caliber round as the mini-14. It was cosmetically different and I suspect that's why it received the attention. Do you recall what weapon it was? It was mentioned in the law enforcement critique of the Florida FBI shooting, but I can't recall the name - brand - etc.

No, I don't know what guns were used in that shooting and it's not too
clear what was banned since most of them have reappeared with cosmetic
changes. :) The mini-14 uses the .223. The only gun that comes to
mind that was banned (until cosmetics were altered) is the AR-15 (M-16
look-alike). It might have been that one but I didn't realize the
Florida shooting involved rifles. I thought it was machine-pistols
(Uzis and Mac-10s), but I don't know.

It's all senseless since the Mini-14 without bayonete, flash
supressor, pistol grip and folding stock, would have killed just as
effectively as the AR-15.

Another pertinent point. The "ban" on so-called "assault
weapons" which is a misnomer, did not ban them at all, only
future production and importation of the specific models on
the list,as well as future production of high capacity
magazines. Those presently owned were not affected.

Actually, a real Assault Weapon by definition uses a
selective-fire mechanism which means that it can fire either
fully-automatic or semi-automatic, selectable by the
operator via a lever which is a part of the mechanism. Under
the ban law they also have at least some of the other
features that Mark mentioned, pistol grip, bayonet mount,
flash suppressor, large magazine capacity. The Mini-14 has
none of these features and only "looks" like an assault
weapon, tho a large-capacity magazine can be purchased, and
these high capacity magazines WERE banned in new production.
Again, present stocks are legal. The Mini 14 fires the same
round as the military M16 -a true assault rifle- uses. That
is, a small caliber (.223) round with a healthy powder
charge resulting in a high velocity projectile that has good
range.

> Such features might offend the senses of many,
> but they're not exactly dangerous or a societal problem.

To most people who haven't been in the military, any long
gun that looks menacing is considered an "assault rifle".

Makes it much easier to lobby against them as legal to own.

>

It's the only way that serious gun control could ever be
brought about in the USA and the oponents of gun ownership
know it. With a view to eventually totally banning of
private gun ownership within the USA, they have adopted a
one-step-at-a-time agenda. Of course this is well known to
gun owners -who *are* The National Rifle Association, and
they are working hard in opposition to it.

The most telling feature about Gun Control is--if it would
work, we wouldn't need it!!!

Mark,

It did involve semi-automatic pistols, but by far, the most damage was inflicted by "Maddox" who was armed with a mini-14. It took a shotgun blast at close range to finally stop him. Officers at the scene said it sounded like a cannon every time he fired it (mini-14) at them. Anyone who has been in war, or involved in a shooting knows what that sounds like.

I guess my point here is the same as yours. If an AR-15 and a Mini-14 use the same round, what sense does it make to "ban" one and not the other. They both kill equally effectively. Unless we ban ALL weapons, banning just the ones that "look" bad won't do any good at all. And we all know that banning all weapons is never going to happen. The Congress should stop playing political games with this issue and deal with the real problem. The people behind the guns.

Regards,

Arnie -
KT4ST

> UN know that all Zionists are racists.

BUT...Here is some logic for you: - Not all Jews are Zionists. Zionists believe that Israel is theirs because it is the "promised land" mentioned in their Bible. Many Hassidic Jews were against the creation of Israel because they do not believe this notion due to differing Biblical interpretation. These Jews are still waiting for the Messiah to come and they believe that they are cursed to live anywhere else on Earth until he arrives. IMHO they think that only Jews who are for Jesus should live in Israel. I could be wrong. Many non-religious Jews do not think of Jews as a nationality alltogether but are loyal citizens of the nations that they were born and educated in. If war broke out between Israel and the USA...I know which side most of my Jewish family and friends and I would be on. Many American Jews who were pro-Israel have been disenchanted because of Israel's stubbon politics and unwillingness to give Palestinians back their lands as they had promised. Many Jews do see the same hiprocracy that non Jews may see. Even some Jews in Israel do not agree on the present government's policies. Thus all Jews are not Zionists and therefore if Zionists are Racists all Jews are not Racists. I'm not completely sure if dOnKbOy is a racist...BUT it could be possible. First off may I ask him to identify himself. I am not going to guess who he might be....Nor who Dr. Hate and Porkbutt may be....The shoes don't exactly fit any Hams that I ever met and didn't hate.

> It's O.K. for Porkbutt to pretend that he is a Jew as long as he defends the
> Jews.

What would be the advantage of pretending to be a Jew if you weren't a movie actor acting a role that was Jewish (like Ray Milland in "Gentleman's Agreement"??

> Just ask Dr. Hate.
Who is he?
> It's O.K. for Porkbutt to pretend that he is a millionaire because Jews are
> all supposed to be wealthy, aren't they?

Now this is getting interesting..Who is Porkbutt...maybe he could loan me some gelt? Contrary to public mythological opinion, according to "Fortune" magazine there are no Jews in the top hundred...but I know of lots of Jews who are homeless and lots of Jews who can't afford to move out of Brooklyn or the Bronx.

> Just ask Dr. Hate.
>
> It's O.K. for Porkbutt to knock up a nice unwed Jewish girl as long as he
> marries her and pretends to be Jewish, isn't it?
Ah so you admit that Jewish girls could be "nice"...maybe there is some hope
that you aren't a complete racist.
> Just ask Dr. Hate.
>
> It's O.K. for Porkbutt to pretend that his daughter is a genius because all
> Jews are supposed to have genius I.Q.'s, aren't they?

Nope there are just as many Jewish idiots as there are geniuses...Scientific
Jews believe that this could be caused by imbreeding. The Jewish bell curve
may be broader than the Non-Jewish bell curve but their centers are the same.
This is in spite of the fact that a famous Jewish genius (named Gould..If I
remember correctly) says that all of the bell curves mean absolutely nothing.

> Just ask Dr. Hate.
>
> It's O.K. for Porkbutt to behave like he is above the law because all Jews
> are above the law, aren't they?

Nope..Ethel and Julius Rosenberg were not above the law. Neither is Pollack.

> Just ask Dr. Hate.
>
> It's O.K. for Porkbutt to have everyone believe that he owns a palace estate
> because all Jews are supposed to own mansions, aren't they?

Nah...More Jews live in city tenements than in country mansions....and some
Jews (including myself) have more dandlions on their lawns than their
Non-Jewish neighbors.

> Just ask Dr. Hate.
>
> It's O.K. for Porkbutt to make racial slurs against African Americans
> because most blacks really hate the Jews, don't they?

Naw most Blacks don't hate Jews and those who do use Jewish script writers
who are experts in explaining to the Blacks why the Jews are more their
enimies than the non-Jewish policemen who don't exactly treat them with kid
gloves. When Black leaders speak against Jews it is only to draw the
attention of complete raciests so they can get around to insulting them even
more than they care to insult Jews. People who hate both Blacks and Jews
would love to see them fight but it does not often happen although they often
work and live together. I never met a Black that hated me because I was
Jewish but like any suppressed people I have met Blacks that hated everybody!
(I can't say that I blame them)...and I must admit I met Blacks that hated
me slightly because I was White. BUT Most blacks who I have known, including
Black Hams, Black technicians and Black engineers have a great sense of humor
and a very cheerful attitude. The poorest Jews who live among the poorest
Blacks do not normally hate each other...They think they know who their
common enemy may be....but IMHO they are all rationalizing. There are some

Jews who recently moved to Brooklyn from Russia who don't get along too well with the Black people...It will take a little time and they will IMHO all be dancing to the same music. Truthfully every time I had generalized about Black people I met many Black people who proved me to be wrong. I can truly say that I never met a Black person who I didn't like...As a matter of fact I got my job at Emerson Radio as the result of a suggestion by a Black Ham. He is Herman Richards W2EPT and according to Buckmaster he now resides in California. I won't go on about all my good Black friends here but if anyone doubts...I can supply a long Black-list for rerferences.

> Just ask Dr. Hate.
>
> It's O.K. for Porkbutt to tell everyone that he is a college graduate
> because all Jews are supposed to go to college, aren't they?

Nope only the ones who can pass the required courses and don't drop out. I almost didn't make it...I dropped out of CCNY and didn't return to college till 20 years later.

> Just ask Dr. Hate.
>
> It's O.K. for Porkbutt to lie about anything or anybody as long as he sticks
> up for the Jews, isn't it?
Nah...Any Jew who can't stick up for his or herself probably wouldn't want any other person to defend them.
> Just ask Dr. Hate.
>
> Shalom,

And hasta luego or whatever to you.

> L.D

or is it LID?
Hardy Har Har yourself!

To the sensible Hams and NewsGroopies who may read the above: - The above post doesn't belong here...but it does belong somewhere on this planet and to those who it doesn't concern: - Let me apologize for biting this bate and posting it here. I won't do it again..at least not if I can't know who the heck I'm replying to. You can all see that I'm no genius because if I was I wouldn't waste my time replying to a person who I don't know, who is talking about people I don't know and probably won't take the time to read this anyway. --w2ilp--

Outdated crap? Handguns obviated hand-to-hand martial arts. Or did they? Ox-drawn plows have been replaced by heavy machinery. Except on small farms, and in underdeveloped areas. I painted my living room with a roller and paint tray. It might have been easier with a power roller, but I'm not planning on painting much else anytime soon. I watched my neighbor struggle to put in deck posts using a hand auger. I wonder if he knows about other tools he might have used. I watched another neighbor dig his post holes with a power auger, with a very large friend helping. The bit grabbed every few seconds in the clayey soil, and would torque the two men off their feet. (Neither way looked like fun, so I have stone pavers instead of a deck. That wasn't much fun, either.)

Everything has their time and place. I especially liked Jeffrey's explanation about CW on HF. I realize it's not for everyone. For them, there's FM on VHF.

Michael.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!
.....

>From the Editor's Desk:

If you haven't had the opportunity of seeing the April issue of QST magazine from the American Radio Relay League, and particularly the article by Rick Palm K1CE on the Shifting Needs of Served Agencies, you're really missing something good. Rick highlig hts the changing roles of our served agencies, and outlines some of the means Amateur Radio can meet those needs. It handshakes very well with the position we at State OES have maintained for years -- that cross training of our groups will benefit everyo ne. You'll be seeing the article soon, and a discussion of the article in some of our upcoming EMCOMM Bulletins. We congratulate Rick and the ARRL for a well thought-out article, that we hope will more closely link all of the volunteer communications or ganizations who must work together to better serve their agencies in time of need.

This issue of the Newsletter is dedicated to the memory of the 168 persons who lost their lives in the explosion of the Alfred P. Murrah Federal Building in Oklahoma City, four years ago today. From all of us who respond to those in need......we will rem ember you.

Stay safe, everybody -- see you next week! Dave Larton, Editor
.....

Current Events:

CINCINNATI HAMS RESPOND AS TORNADO STRIKES

The Cincinnati Section SKYWARN Weather Amateur Radio Net was in operation April 9 when a killer tornado struck the Blue Ash/Montgomery area of the city around 6 AM. Six people died as a result of the storm, which caused heavy damage and power outages. WARN, with its W8NWS net control site at WLW radio, quickly reported weather conditions and damage as it occurred and alerted police and emergency crews.

As a result, WARN Public Information Officer and ARRL PIO Michael Nie, KB8VMX, ended up as the live lead story on the 6 o'clock news on April 15 on Cincinnati's WKRC-TV Channel 12. The station's Chief Meteorologist, Tim Hedrick, interviewed Nie live on the value of severe weather spotters and especially ham radio spotters.

"I was shocked," said Nie. "All the press releases and business cards finally paid off." During the interview, Nie told how two local spotters used Amateur Radio to relay the first reports of a tornado on the ground, as they dove for cover in a ditch. Despite the close call, the spotters were not injured. (For more information on this event and on WARN operations, visit the WARN Web site, http://www.warn.org.)

The Queen City Emergency Net provided communication support on VHF with operators at various emergency operating centers, command posts, shelters, and disaster relief agency headquarters. QCEN is affiliated with the Cincinnati Red Cross and typically provides damage assessment and communication support for the agency. The storm also affected parts of Indiana and Kentucky.--Fred Stone, W8LLY; Mike Nie, KB8VMX

EMERGENCY EFFORT GETS NATIONAL TV COVERAGE

An effort to obtain health-and-welfare information via Amateur Radio from Yugoslavia war zone got some national media attention recently. Thanks to efforts by the ARRL, Diane Ortiz, K2DO, and Stephan Anderman, K2SMA, a TV news crew from Fox News Channel spent about two hours April 10 at the Long Island home of Mid-Island Amateur Radio Club President Mike Christopher KG2M, where this operation is taking place. A three-minute feature aired the following day on FNC.

On April 9, Christopher, who's also ARRL New York-Long Island Section Bulletin Manager, activated MIARC's International Emergency Assistance Unit for the purpose of passing health-and-welfare traffic from refugees in the Yugoslavia war zone to family and loved ones in the United States. This is being accomplished with the help of Drago, T94GB, in Bosnia-Herzegovina, the only country in the Balkans with which the US has a third-party traffic agreement.

T94GB will be QRV daily on 80 meters with the war zone and refugee areas, gathering health and welfare traffic, then

passing that to the IEAU on 15 meter SSB for forwarding to the National Traffic System.--The Hudson Loop via Mike Grant, N2OX

University Leaders and Federal Lawmaker to Discuss the Progressive Development of Disaster Resistant Universities Initiative

Washington, April 19, 1999 - University leaders from around the country and federal lawmakers will meet April 20 in Washington D.C. to discuss the progress and the next steps of the initiative, Disaster Resistant Universities.

In recent years FEMA's latest initiative, Disaster Resistant Universities, builds on Project Impact: Building Disaster Resistant Communities' progress in reducing the human and economic costs of disasters, by protecting the substantial federal investment in university research and education. Last fall, university leaders asked FEMA to support their efforts to address their vulnerability to natural disasters.

Having seen very costly natural disasters impact universities, and knowing the importance of universities to their surrounding communities and states, FEMA's Director James Lee Witt responded by proposing the Disaster Resistant Universities initiative, which several universities have signed on to as partners. These universities have been informing Senators and Members of Congress of the importance of this initiative to their institutions.

Several professors at University of California, Berkeley are conducting a study on the economic impact universities have on their regions and the nation, and how disasters affect university communities. Director Witt and university representatives will discuss Wednesday how to implement Disaster Resistant Universities initiative this fall.

The initiative will not only protect the nation's investment in research and education, but a valuable economic, cultural and recreational resource to communities. The university representatives in attendance, which will include other senior administrators from various institutions, will be recognized for their foresight and firm commitment to ensuring that natural disasters will not hinder the economy and research capacity of the nation.

By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC180 Net Control Training For release 4/19/1999

Certified Net Control Training is a vital part of the training program for the Huntington Beach RACES unit. It's May, 1998 News letter put it this way: "The Net Control Training Team has worked hard to determine what information to teach and how each individual could best demonstrate their ability to run the Huntington Beach RACES Net in an emergency. The Team has succeeded in developing a simple classroom training program followed by individual drills for RACES personnel. The class is divided into three parts;

Part I, Classroom Training - The classroom training is open to ALL RACES personnel and all are encouraged to attend.

Part II, Tactical Command Trailer - Training on how to operate in the Tactical Command Trailer will be done at Field Day. RACES Field Day and Camp CERT will be held in xx and all are invited to spend the weekend. The Tactical Command Trailer training will be held from 1-4 PM on Saturday. A certificate is part of the Net Control Credential program.

Part III, EOC Drill - The EOC Drill consists of message handling from the RACES Radio Room in the EOC. You will operate at Net Control while other RACES personnel send field messages. The Team has scheduled the following dates xxxxxx in the EOC. You will need to sign up for one of them and can attend only one. You can observe prior to going through the drill. If you have difficulty demonstrating the capability to run the Net the first time you try, may may come back and try again at one of the later dates." (end of quote.) ______

One method of training HF net control operators was described some years ago by Stan Harter, KH6GBX (deceased) because he felt HF net control required skills often not learned on vhf/uhf

nets. Here is a general description of his idea:

Set up an audio amplifier system with speakers and mikes in a building. Put the class of net control operators in one room, the trainers in another, and provide the trainers with the ability to introduce HF background 'noise', "qrm", "static" and "real time interference" into the "net" that is conducted on the audio system. In other words, for HF Net Control operators, provide them with exactly the same conditions they can face on-the-air, but do so in an in-house audio setup that emulates the real net. --- To subscribe to bulletins, use the Subscription Services web page at <http://acs.oes.ca.gov/subscribe.html>. If you don't have web access, just send an e-mail message to <mailto:emcomm-bulletin-sub@harthaven.com>.

- For training assistance contact the ACS Training Officer at the web site or send an email to larton@garlic.com
- Submit suggestions, topics or comments on the bulletins to cary.mangum@macnexus.org or cary_mangum@oes.ca.gov

Bulletins are on the ACS Web page: http://acs.oes.ca.gov -and a Landline BBS: 916-262-0856 (graphical & standard interface); and a FTP Archive: ftp.ucsd.edu/hamradio/packet/tcpip/incoming for some bulletins. For earlier ones: ftp.ucsd.edu/hamradio/races

.....

Please let others in the emergency services field know of the newsletter, and encourage them to join... If you have opinions, suggestions or written material that you'd like to share with the group, let us know. We're always looking for new ideas and suggestions that will benefit everyone.

See you next week!

1904. MFJ 1798: first impressions

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-25 00:00:00 UTC
From: Michael Young <nobody@all.org>
Message-ID: <925028971.993.92@news.remarQ.com>
Source record: 144819

I just bought and put up the MFJ 1798. Due to the dearth of information on the web about this vertical, I thought I'd post my first thoughts. I don't have anything else here to compare it to performance wise, so you'll have to look elsewhere for that. Also, I haven't had a chance to tune to resonance on the lower bands; and 12m and above were dead by the time I finished.

It's a 20' tall multi-band vertical with a 12' ft square counterpoise at the top, covering all amateur bands from 80m through 2m. The vertical is a full wavelength for 6m. A separate 18" 2m quarter wave sits above the counterpoise. The HF bands are matched using a variety of rods, coils, and capacitance hats. Cost from AES was $250.

The instructions say it takes 5 to 6 hours to assemble. It took me 8 hours with minor rework, and a trip to the hardware store for some missing split lock washers. For the most part, it goes together like an erector set; the instruction manual is available on MFJ's web site. Only basic tools were needed.

I built mine in my garage, resting across the top of a 4 section fold-up type ladder. The counterpoise end stuck out through the open garage door. Setup as a 4-1/2' tall scaffold, this was almost enough to keep the counterpoise rods off the driveway. As it were, the bottom two touched the ground, but this did not interfere much with assembly.

The center pole is the radiator, ringed by 4 tuning rods for 10, 12, 15, and 17 meters. The tuning rods are made from 3/16" aluminum rod sections, held together with set-screwed sleeves. The top sections have #10 threads rolled into one end of the rod. Two nuts above and below the plate hold each rod in place. Three fiberglass spacers hold the rods in position around the center pole.

I had the most difficulties attaching the rods. The rolled threads were not completely formed on mine, and was bad enough on one to snap off below the nut while I was torquing the nut into place. There was enough rod and thread left to put on a nut from my junk hardware drawer. The original nut stayed firmly stuck to the part that broke off.

Also, the rods have to be placed in a specific sequence relative to the 2m radiator. The instructions do state this clearly, but not until after telling you to install them in a particular order. I had to swap the 17m and 15m rods to get them to match. This is not the trivial task it may seem. The rod sections are held together with sleeves, using pointed screws. This arrangement peens the rods in place in the sleeve, and makes removal and replacement extremely difficult. Moral: read ahead a page or two in the instructions before undertaking each step.

After rearranging the rods, the balun was no longer under the 17m rod, as required. The instructions here are not where they are needed to avoid rework. I ended up turning the bottom assembly 180 deg to suit.

The final assembly step is to mount the loading coils. The loading coils are on a 2' fiberglass rod that mounts perpendicular to mast, at its bottom. Three capacitance hats help tune the 80, 40, and 30m bands are also on this rod. The instructions say to mount the antenna on a temporary mast to install and tune the hats. It was storming outside at this point, so I opted to install the hats inside the garage, with the antenna still lying on the makeshift platform. The spokes for the longest bands are 23" long. It's difficult to imagine how awkward these hats are until you start working with them. This decision led to the most problems.

Even with heavy rains, high winds, lightning, and darkness outside, I thought I would try erecting the completed antenna on a 5' pole I guyed up in the backyard. The soggy ground helped make this an unsuccessful experience, and gave me new respect for the 2-1/2 sq. ft wind loading. I almost lost it more than once trying to lift it shoulder height in the driving wind and rain. In retrospect, the hastily erected post couldn't have held the antenna in calm conditions.

Giving up finally, I rested the antenna supported at one end by a chain-link dog run, and on the other with its construction platform (moved from the garage). In the tussle of moving and wrestling with the antenna, four of the capacitance spokes got entangled on something or another, and were pulled from their mounts. They are held in place, set-screw fashion, to collars on the loading coil rod. A few others were bent slightly, but they were easily straightened by hand.

Two lessons were learned from this. The capacitance hats, and the loading coils they mount to, are extremely fragile and awkward. They attach to the mast using two simple hose clamps. A wiser person would remove the loading coils when moving the antenna.

Second, the 3-ft roof-top tripod I bought seemed very, very undersized from my experience with this wind. I never really lost control of the antenna, but 30 mph on 2.5 sq. ft, 15' or so up, creates a strong force to be reckoned with. While on the roof a few days previous, I surveyed my neighbors' TV antennas. Quite a few were lying broken, their mast, mountings, or tripods having failed. The first really strong wind will most likely rip it down, or worst, rip the tripod and take part of the roof with it. The XYL would definitely not be pleased.

The most direct solution seemed to be guy wires to tie everything tightly to the roof. When I visited my nearest Home Depot, they had plenty of wire rope in all sizes, but only had hardware for 1/4" wires. I agonized over this for some time, and finally visited an Ace Hardware. They had full racks of hardware for 3/16" cable, probably the best compromise for this application. 3/16" aircraft cable is good for over 800 lb tension, much more than I can use. (The tripod has a single rivet in double shear on each of its legs. This would be the likely point of

failure.) 1/8" cable seemed a bit on the scrawny side at 200 lb working load.

I anchored the guy wires to the roof with 1/8" steel straps, using 3 1/4"x3-1/2" lag screws each. Small cleats on the tripod mast keep the guy wires from sliding down the pole. With the tripod mounted on 2x6's across 3 rafters, the mast was finally as firm as it was going to get. (As I tested my handiwork, the thought occurred to me I would fall to my death if I guessed wrong, and the mounts failed as I lunged fore and back. It held firm, as my continued presence attests.)

Getting the antenna onto the roof was almost anti-climatic. With the antenna bottom on the picnic table, the counterpoise easily cleared the eave line. My wife was able to lift the 20 lb antenna enough for me to pull it up the rest of the way. With clear skies, a calm wind, and no capacitance hats to struggle with, the rest was a snap. The wind-down is that I did a sloppy job plumbing the mast. I used a bubble level, half-heartedly, after the guy wires were tensioned. The tall vertical makes the slight list -- no more than 5 degrees -- very noticeable. However, I judge that the small mass won't have much effect on the structural integrity. The mechanical part of the job was done. Running the coax and ground wire was all that was left. By the time that was done, it was already dark, and the tuning will have to wait until tomorrow.

Oddly, I had tested the antenna while it was lying across the two metal makeshift supports. The SWR was less than 1.5:1 on all bands! (Except 30m; three of its four capacitance spokes were lost in the rain soaked tussle.) I didn't get out much, though, since it was lying horizontal a few feet off the ground.

Tonight, I found that 80m was resonant just below the band, and 40m is infinite all through the band; I presume it's long. Mounted on the roof, 80, 40, 30, and 20 will still be easy tune. The shorter bands are tuned with the rods, now mounted above easy reach. The 15m is a hair long, and is resonant at the bottom of the band; I should be able to reach it with the nippers to get more even coverage. Sadly, there is no way to get to the 10m and 12m rods.

Overall, assembly was easy, although it was missing about $1 in split washers, and the threaded rods really were not. I would run a #10 die down each thread before attempting assembly. Pay careful attention to orientation and relative placement of each item, particularly the tuning rods. Don't try to move the antenna with the loading coils and capacitance hats in place. And, of course, it's helpful to have a securely mounted temporary mast for preliminary tuning.

The roof mount was a crap shoot at best. All told, I have $150 in hardware invested, plus countless hours noodling and fretting over details. In the end, it took about 4 hours of labor to mount the tripod securely. I don't think a larger tower would have been the answer. The problem was distributing the 1800 ft-lb moment across enough roof to

support it. As installed, the two u-bolts holding the antenna to the mast will likely fail first. At worst, this leaves the roof intact. Maybe I'll just put up a small beam if/when this breaks.

My reason for buying the MJF vertical was to avoid significant roof structure. Maybe the small tripod would have held by itself, but I'll sleep better with the guy wires in place. However, the added strength and rigidity negates the original decision logic. The mast will now easily support a small tri-band beam, which is what I wanted in the first place. I don't expect I'll follow this up with a performance report. I think I can sum up already, and just say it works, but doesn't put out as well as even a small beam. At present, I feel this is a sure bet, even for the best performing vertical.

Michael.

Old fashioned: Anything requiring an attention span of more than twenty seconds or having anything to do with putting in an amount of time to attain something. The term can also include anything having to do with tradition. See "hazing ritual", "lodge hall", "hoop jumping" and "old boy's club".

Out, damned Spot!

Dear OM Nick:

Just suppose.....
Someone takes power in Australia and decides that there are too many Yugoslavs living there. The word is put out by radio and television that any Yugoslavs must leave the country within the next 12 hours or be killed.

For some reason, you are delayed. Soldiers arrive and drag you and your family out of the house. While you are made to watch, your wife is gang-raped and then killed. Next, your precious 2-year-old son is tied to the bumpers of two military vehicles which gun their motors and tear him in half.

One of the soldiers then pokes out your two eyeballs so that, forever, these will be the last visual images your brain receives. You stagger back toward your house and realize that it has been set afire.

A ham operator reports this (and numerous other incidents) to the outside world. What should be the reaction of the world community?

Yrac?

Hello,
I bet you could get alot of ducks with a MAC-10. At least you wouldn't go home without anything if you used a MAC-10!
All kidding aside I do beleive that the press wants to disarm the public. I mean the system failed these two brats in Littleton. I have heard cryes that the Constitution is to old and needs to be revised. Bullhockey! I want to know what is different about 1953 1959 1969 1973 1999 as far as the Constitution is concered? Boy I would love to hear the press cry if they where to say that freedom of the press is now illeagal. That Bill of Rights has made this nation the great power that it is. I say don't fix whats not broken. The fact that there are so many guns in the USA is what keeps other contries from invading the USA.
I would sujest we look at the real problem here. Its the teachers of the schools today (I bet they are afraid that they are going to be sued for caring to much) , and the students themselves. I think that the students need to be tought a little love and tolerance. What ever happened to the Plege of Alegance, what ever happened to school prayer? What is this seperation of church and state? If this is true why is In God We Trust on our money? I know In God We Trust all others pay cash!HA HA! I remember back in 1st grade there was a student had a religous reason for not particapating they didn't. I remember what it was like to be a teenager in high school back in Aberdeen. It was hard! I was littler then everyone! I would say more has to be done about mentoring trouble kids. The kids that seem to be getting into all this rype of trouble are the kids that all the more popular kids pick on. Its always the kids who play sports or the good looking kids that seem to get all the attention. Thats the real problem not weather or not kids can get guns or not. Back in my old neighborhood we all had guns and nobody was killed or even wonded. A window got put out once but that was stupidy nothing more.
Thats Just My Opinion I Could Be Wrong!

>. I understand that input and output are
>located on 2 different freqs?

Hi, Joseph:

The band plan for 2 Meters is as follows:

Repeaters below 147.00 have an input 600 KHz BELOW the repeater output frequency.

Repeaters above 147.00 have an input 600 KHz ABOVE the repeater output frequency.

Your new radio may set the split automatically. Refer to the instruction book which came with the unit for a more detailed description and instructions.

The people who trained and/or tested you for your Amateur license can give you info regarding open repeaters. Remember, many are OPEN but require a tone access to activate. This is not intended to be selective against new Amateurs; it is a means for avoiding interference from nearby repeaters operating on adjacent channels.

When you find a repeater you enjoy using, ask if contributions are accepted to support the machine. Building and maintaining a repeater is quite costly, and it is a nice gesture to help financially when you use a specific machine on a regular basis.

With very few exceptions, anyone can use a repeater, whether or not they make a donation. However, with many repeaters, a contribution will bring a nice letter from the repeater operator with codes for special functions such as autopatch, linking to other machines, getting signal strength reports, testing your keypad, etc.

Welcome to the hobby! Now You're Talking!

Yrac

Hello all
I have a Dentron Clipperton L forsale. It has new 572b's new band switch and all of the Capacitors and diodes have been replaced. I have schmatics too. The amp is wired for 220 with 100 watts drive 1200 watts out on 80-meters. The band coverage on this amp is 160-15. I'm asking 500 bucs plus shipping. If you are interested drop me a line.

There is not "wholesale murder" in Phoenix where open carry of handguns
is perfectly legal and anyone except felons and mental incompetents can
own as many as they like. What makes New York so different? In Arizona,
and other states with concealed weapon permits, a criminal never knows but
what the guy beside him may be armed. Armed robberies have been nipped in
the bud by such law-abiding citizens. A robber pulled a knife on me one night
in a bowling alley parking lot in Mesa, AZ while I was waiting to pick up my
kids. All I had to do was show him my 9mm Detonics and he took flight. Those
kinds of incidents happen all the time and go unreported.

> In a free society all citizens have a right to life, liberty and the pursuit
> of happiness and freedom from the fear of unregulated weapons in the hands of
> hate mongers.

I remember the first part but I don't remember that second part. If we outlaw
guns, the hate mongers with their illegal weapons can rest easy and assured
that we are completely helpless against their onslaught. We cannot rely
on the government to protect us from criminals. We must each shoulder
some of that responsibility if for no other reasons than we may not be
able to call for help and help may not arrive quickly enough.

> Some of us may neecd to let off steam without
> the ability of reaching for a weapon that can be used to inflict multiple
> casualties in short order.

Some of us need to gain a little maturity, training, and sense of responsibility.
I assume you have no butcher knives in your house?

> But a maniac schitsophrenic may not care about any threat to his life...he may

> I would suggest that you take a course in abnormal behavior.

I suggest we put all those people who exhibit dangerous abnormal behavior behind fences where they belong and eliminate the ones who commit capital crimes from the gene pool.

> If only a few
> didn't own guns and it saved only a few lives I would be for making guns a
> lot harder to own.

Statistics indicate that guns are used to prevent crime many, many more times than they are used to commit crime. You just don't hear about those times on TV or in the newspapers. Disarming the law-abiding public will cause more lives to be lost. Are you willing to accept responsibility for the deaths of individuals who would still be alive if they had only been armed and prepared?

One of the Northern European countries has the lowest rate of breaking and entering. In that country, every able-bodied male is required to own a military rifle. Think there's a correlation?

I may be getting some 3/4 or7/8 inch hard line that is 75 ohms. I remember reading a article about using 75 ohm line. The author only did test up to 2 meters. I want to use this line on 70 cm. Will cotangent transformers work for this band? I have heard if everything else is good you would only get a 1.5 to 1 match any how. Also do I have to mess with the antenna? I would like to use this at a 440 repeater site and the antenna is a 4 dipole array. Is there any one that sells matching transformers?

Any help?

> All kidding aside

I don't think you realize how your kidding replays history.

In the fall of 1988, Josh Sugarmann, formerly of the National
Coalition to Ban Handguns, and presently head of his own organization,
the Violence Policy Center, authored a strategy memo for the gun
prohibition movement. Sugarmann observed that the handgun-ban issue
was considered old news by the media, and there was little realistic
possibility of enacting handgun bans in the immediate future. In
contrast, suggested Sugarmann, the "assault weapon" issue could allow
the gun prohibition movement to open a massive attack on a new front.
Sugarmann noted that public misunderstanding over the nature of
semiautomatics would play directly into the hands of the gun
prohibition movement:

The semiautomatic weapons' menacing looks, coupled with the
public's confusion over fully automatic machine guns versus
semiautomatic assault weapons -- anything that looks like a
machine gun is assumed to be a machine gun -- can only
increase that chance of public support for restrictions on
these weapons.[1]

As several Senators noted, attaching the label "assault weapon" to
certain semiautomatic firearms was a brilliant stroke.[2] Many
members of Congress, like Rep. Gary Ackerman of New York, fell into
this carefully laid trap. In a House debate, Ackerman actually asked
whether hunters needed "a Mac 10 machine gun with 30 round banana
clips of armor piercing bullets to bag a quail?"[3] Of course armor
piercing bullets are not available for sale to the public (and have
not been for over 20 years), and none of the "assault weapon"
legislation had anything to do with machineguns (which are already
heavily regulated).

> I want to know what is different about 1953 1959 1969 1973
>1999 as far as the Constitution is concered?

Well, for one thing, prior to 1969 you could purchase firearms mail
order, delivered to your door without proving your identity to anyone.
We didn't have the kind of mindless gratuitous violence we have today.

Maybe such unregulated sales aren't a good idea, but our problem is something else. We've gone from mail order sales when there wasn't such a problem, to "papers please" today. And people are still calling for more.

The gun debate is counter productive to ever getting to the underlying social ills which are manifested in violence. Anti-gun advocates (more accurately pro-prohibition) use every opportunity to stigmatize and demonize the "extremist" NRA (witness the so-called "assault weapon" ban which was a near-complete waste of a year's political capital and public resources). This kind of failure to recognize and accept the legitimate interests of half the households in America which own guns (98% of which owners aren't the problem) only pushes these owners to an "extremist" NRA. It explains why gun owners usually reject almost any form of gun control. It thus far has always been a ratchet turning in only one (tightening) direction and a cheap fix for a far deeper problem in our society. It always ignores the fact that record numbers of people buy guns because of crime (committed largely by repeat offenders which the system failed) and seeks to disarm them rather than fix the failure of the system to correct or rehabilitate offenders.

A criminologist[4], and self-described Marxist, has argued the gun control debate is destructive to the purposes of the left; an obfuscation which prevents society from dealing with the lack of social institutions etc. This seems increasingly true when anti-gun (pro-prohibition) advocates continually portray rival drug dealers and gang membes as "friends and acquaintances" as if all gun owners are equally capable of violence as those who largely account for our crime rates. This kind of vicious stereotyping only serves to placate an anti-gun agenda based upon moral hatred rather than a sincere desire to reduce violence. It simply drives people to both extremes.

Another example is a catchy phrase often bandied about: "gunshot wounds are the leading cause of death among 18-25 -year-old males." This sounds disturbing enough and its obvious point is that if we got reduced (more accurately "eliminated") guns the problem among this segment of society would be largely addressed. What is obscured by this statistic is that young black males account for over 80% of the statistic. Nobody would dare suggest that we disarm all blacks because 18-25 year-old blacks are dying from gun shot wounds. But, it is perfectly enlightened to prejudicially stereotype and stigmatize everyone and suggest everyone should be disarmed because a less specific segment of society has a problem.

However, the real travesty is that a very serious problem is hijacked and used to further an anti-gun cause. Instead of calling attention to young blacks and how society has failed them, their problem is ignored and obfuscated. This point isn't lost on gun owners and has the effect of pushing them further into opposition to any rational dialogue on gun control.

This is the stuff people ought to be upset with. Not bayonette lugs, pistol grips or the size of someone's magazine.

[1] _Assault _Weapons _and _Accessories _in _America. When Sugarmann wrote the memo, he was affiliated with an organization called "New Right Watch." (cited in Morgan, Eric and Kopel, David. The Assault Weapons Panic: "Political Correctness" Takes Aim at the Constitution. Independence Issue Paper No. 12-91. Golden, CO: Independence Institute. October 10, 1991. p. 24.) Although attaching the "assault weapon" label to semiautomatics greatly misled the public - as Sugarmann knew it would, Sugarmann did not make a verifiably false statement. The more palpably false statements have come from Handgun Control, Inc., with its untrue claims that "assault weapons" are the "weapon of choice" of criminals and are "weapons of war."

[2] The Anti-drug, Assault Weapons Limitation Act of 1989. S. Rep. No. 160, 101st. Cong., 1st. Sess. 16 (1989) (introduced by Senator DeConcini to reduce semiautomatic firearms abuse by drug traffickers and violent criminals). Senators Thurmond, Hatch, Simpson, Grassley, and Humphrey commented that "[i]n the attempt to generate support for banning these guns, they have been referred to as "assault weapons," a term which conjures up some idea of terrible weapons that have no purpose other than killing innocent people." Id.

[3] 135 CONG. REC. $ 1868 (daily ed. Feb. 28, 1989).

To all who have sent their comments:

Maybe you had better take a good look at what you are saying, some comments are well thought out and others are not. True there may be lazy people out there who don't want to work for their privileges, but there are those who do. Some of these people have handi-caps (which are not considered handi-caps), I happen to have an extremely hard time with timing and separating the characters when receiving. I have tried NUMEROUS times to get it but can't (I'm not whining). So I turned my interests to "above 50mhz."
As for the comment Mr. Young made there is more to vhf than fm. A lot of people who think morse code is out of date and "whine" about it are possibly too busy to learn it and the only enjoyment they get from ham radio are portable or mobile. Myself I am gone from home 5 days a week with a home, car and family to take care of. Now as for the people "set in there ways", did anyone consider, the most of these people are older? With age not only come wisdom but a sense of comfort and security in things that are familiar to them. The laws for code will change in time , once these people have passed on (regrettably). Please let's keep the issue alive as it is one in the RADIO community which will need to be re-evaluated on a constant basis, but can we keep it civil? Remember amateur radio is not only a PRIVILEGE but a SERVICE as well. Also every time one transmits they are nominating themselves as ambassadors to their country. you never know who, where you are being heard. Even on VHF FM.
Thanks for reading,
hope I opened some eyes.

That's not always the case. Our local VE team switched to the multiple choice format 2 years ago. The failure rate went up about 20%. The ARRL tests have 2 answers that are so similar(was it W9NT or WN9T?, 45 watts or 40 watts) Bottom line, if the candidate can't copy the code, they probably won't guess their way to a passing grade.
I do admit that there are ALWAYS exceptions!

SOAP-BOX mode>on....

The difference in Hams who had to pass the CW requirements of their particular license class,and the people who would like to have a license in the same class,is simply the Hams WORKED for what they have.The others obviously dont want it bad enough.I got past the 13 wpm CW requirement in 91 and,have never used CW since,as I had to work so hard at it,I grew to hate it!(it didnt come very easy for me) I do agree however,that CW ...maybe..shouldnt be a requirement,but it should be replaced with something that will separate the serious radio ops from the curious.A good friend of mine,who is an MD,stated it perfectly..."75% of the 'hell' I went thru in medical school was designed to 'weed out' the students who werent dedicated enough to become a Doctor." The same holds true for Amateur Radio,in that there should always be some difficult 'hurdle' to overcome before obtaining a license.This is by no means a perfect solution,but its the only one we have at the moment.

I've posted pro and anti URLs. The fact that I've posted pro-URLs to a ham newsgroup, or reported the new URL of a ham who lost his old URL due to ham complaints[1], should indicate I'm not a supporter of non-enforcement. Conversely I'm not comfortable with the idea that CBRS operators should be pushed back (through enforcement of the buffer zone between ARS and CBRS) to CBRS without even an attempt to fix the *rampant* disregard for laws on CBRS which makes CBRS unuseable and pushes operators into other channels.

It's this non-enforcement which at least causes me to understand why so many (perhaps the majority) of CBRS operators use linears and talk out of band. Just pushing them back in band is a recipie for them to view nocode ARS as an expansion of CBRS. Indeed, Copper has already suggested this as noted in the URL[2] in the posting you referred to.

I don't mind saying that I'm not a ham and I'm just a bit skeptical of FCC's new-found devotion to enforcement. I'm not sure it isn't oddly timed to placate opponents of reduction/elimination of code precisely at a time when FCC seeks to accomplish something in this regard. I support reduction/elimination, but I think opponents have a valid point: look at CBRS. I personally would want to see more dedication to enforcement (or enforcement moved permanently to the local level) before I fell for FCC's "trust me" routine.

As an example of what has me just a little sketchy on this "new FCC" is the little story from ARRL's mailing, "* +Riley Hollingsworth surprises hams at NAB." Riley's boss was reported to have said,

"When I turned Riley loose, I said, 'look, you're going to be going all over the place. How can I get in touch with you?''' Lee recalled. "And he said, 'Boss, I'm like Batman, it's real simple. All you have to do is call out K4ZDH, Riley, are you around. and I'll show up, I'll be there.'"

So Lee gave it a try. "K4ZDH, Riley, are you around?" After a pause, from the back of the room Hollingsworth piped up, "Here I am," and came forward to address the gathering.

And the crowd, as they say, went wild.

I don't know about anyone else, but this sounds like pure showmanship. It might make people feel good, like they're returned to the old days, but what's been given can be taken away -- and we have more history of it being taken away than we have of this current "Batman" enforcement (which is ironically timed to coincide with complaints concerning reduction in requirements).

That's just my opinion. Either way, I'd say "trust with verification." I can't imagine anyone would disagree.

Mark

Your rebuttal about us no-coders has been the only one that's made sense since I started reading this NG.
1) Let's keep CW but make our entrance requirement be 5 wpm for all the HF bands instead of 13 or 20. The key issue is not that CW is going to be dropped as a license requirement. The whining from the pro-CW hams is that the Morse Code proficiency is going to be decreased.
2) The interesting thing is that many of these foreign hams know english, albeit choppy, and also communicate quite well on the Internet.

Harry Helms, AA6FW, wrote a nice book ALL ABOUT HAM RADIO: HighText Publ., San Diego, CA. PP. 62-64 gives an excellent history about the ARRL, licensing history. Those few pages convinced me that ham radio's die hards need to change or this hobby will become stagnant.

BTW, I also took his advice and joined the ARRL; whether I like its policies or not, it's the only effective ham lobby along with W5YI, and of course, the manufacturers.

Regards, Oscar

ZD Engineering sells transformers for most types of CATV hardline.
They work fine, and also serve as substitutes for the often expensive
hardline connectors. The address I have is 605 Balsley Avenue,
Findlay Ohio, 45840. The phone number is 419-424-8765. ZD
Engineering is owned by Paul Darwactor W8ZD. I've used these
transformers and can recomend them.

(It has been some years since I've bought any. I can't guarantee
that the address and phone number are still good, but it is the
best info I have.)

Since the SWR isn't really that high, and excess SWR loss is
relatively low, the question of why should we care is relevant.
The reason is that the reactive termination can *detune your
duplexer*. This leads to desense problems.

You can work around that in a couple of ways (absorb the reactance
into the tuning of the duplexer, or cut the line to a multiple of a halfwave,
remembering velocity factor), but it is generally better to match the
system up as best you can so you can freely interchange parts without
having to retune the entire system. A pair of these transformers are
useful for doing that. (You still have to get your antenna tuned correctly,
or you'll have SWR on the line anyway.)

Exactly. This is the point that gets lost in the popular gun debate.
The underlying problems are never considered. It's all us vs. them.
We've wasted tremendous public resources on policies that even the
supporters knew would have little effect on violence compared to the
expenditure. That just drives gun owners further into a reflexive
anti-regulation position.

The problem that isn't addressed is the failure of government to
correct and rehabilitate offenders. Our violence rates are often
compared to other countries as proof that we're a violent society and
guns are the antigen. However, if we removed the contribution repeat
offenders make, we'd have crime rates which would be envied.

Studies have found that approximately 75% of murderers have adult
criminal records,[280] and that murderers average a prior adult
criminal career of six years, including four major adult felony
arrests.[281] These studies also found that when the murder occurred
"[a]bout 11% of murder arrestees [were] actually on pre-trial
release"--that is, they were awaiting trial for another offense.[282]

The fact that only 75% of murderers have adult crime records should
not be misunderstood as implying that the remaining 25% of murderers
are non-criminals. The reason over half of those 25% of murderers
don't have adult records is that they are juveniles.[283] Thus, by
definition they cannot have an adult criminal record. Juvenile
criminal records might well show these murderers to have extensive
serious criminal records. "The research literature on characteristics
of those who murder yields a profile of offenders that indicates that
many have histories of committing personal violence in childhood,
against other children, siblings, and small animals."[284]

[from http://www.2ndlawlib.org/journals/tennmed.html]

The implication that impacting the 98% of gun owners who aren't the
problem completely ignores what the real problem is. It also implies
that this vast majority is in some way similar to the abberants who
are responsible for most crime. It's just more stereotyping and

stigmatizing. It ignores that it is the constant release of these abberants onto the streets which causes the other 98% to arm themselves. Going after the 98% can only be explained as a deep disgust with guns (symbolic crusade), or simple animsim (scapegoat objects).

By blaming objects, a person can avoid having to blame individuals for their moral choices and lack of self control. Some gun controllers base their position on their sincere belief that gun control could reduce crime. Other advocates of gun prohibition seem motivated by a desire to express their disdain for the kind of people who own guns. Other controllers may be reluctant to condemn groups (particularly the inner-city underclass) for their actions, and guns therefore become a substitute scapegoat object.

Indeed, the scapegoat object has long tradition in Anglo-American law. For many centuries, if a criminal killed someone with a sword, the sword would be forfeited. Earlier in Britain, objects that "caused" a death were punished. If man fell from a tree, the tree was cut down. If he drowned in a well, the well was filled up. If a criminal killed a victim with a third party's sword, "the sword shall be forfeit as deodand, and yet no default is in the owner." A steam-engine was even forfeited under this doctrine (Holmes, 1881). The "deodand" was a gift to God of the object causing death. In early American law, a tree that fell on someone might be destroyed as deodand. One court ordered destruction of a canoe that had failed "to make way in a storm," causing its owner's death. A Virginia court ordered the chain by which a boy had hanged himself in suicide to be forfeit as deodand (Chapin, 1983).

Similarly, in ancient Greece, a sword used by a murderer would be banished beyond the city limits, as would a statue that fell on someone (Hyde, 1916). This punishment of physical objects was paralleled in medieval and early modern European law by the legal punishment of animals. If a pig killed a baby, or if a swarm of locusts ate a crop, the animals would be charged with legal offenses, defended by a court-appointed lawyer, and usually convicted. Animal defendants whom the court could apprehend, like domestic pigs, would be tortured to death, just as were human criminals (Evans, 1906).

Some scholars suggest that the people who punished swords and executed pigs were not so stupid as to believe that swords or pigs could form criminal intent, or could be deterred by the punishment of their fellows. Rather, argues one scholar of the phenomena, people were terrified by the seemingly random nature of bad events, which implied that perhaps there was no order to the universe. Thus, the purpose of punishing objects and animals "was to establish cognitive control ... the job of the courts was to domesticate chaos, and to impose order on a world of accidents--and specifically to make sense of certain seemingly inexplicable events by redefining them as crimes ... the child's death became explicable. The child had died as an act of

calculated wickedness, and however awful that still was, at least it made some kind of sense" (Humphrey, 1906: xxvi). Albert Cohen described the same phenomena as the "evil causes evil fallacy": the belief that bad consequences must had bad causes. Perhaps it is easier to trace America's problems to "wicked" objects like guns or drugs, rather than to consider the depressing possibility that America may include a disproportionately large number of wicked people.

[from http://www.2ndlawlib.org/journals/dk-ideo.html]

As you can see, it's an interesting topic and it's unfortunate the popular debate centers on perceptions and stereotypes.

====

[280] An FBI data run of murder arrestees nationally over a four year period in the 1960s found 74.7% to have had prior arrests for violent felony or burglary. In one study, the Bureau of Criminal Statistics found that 76.7% of murder arrestees had criminal histories as did 78% of defendants in murder prosecutions nationally. In another FBI data run of murder arrestees over a one year period, 77.9% had prior criminal records. Federal Bureau of Investigation, Uniform Crime Rep. 38 (1971).
The annual Chicago Police Department bulletin Murder
Analysis shows the following figures for the percentage of murderers who had prior crime records:

1991: 77.15%
1990: 74.63%
1989: 74.22%
1988: 73.59%
1987: 73.81%

Five year average for 1987-1991: 74.68%

Does your newsreader present threads as one coherent listing?
The relply was made to a April 25 post, that shouldn't be too hard
to find; providing you are following the thread and not jumping in
ill-informed?

You want me to sort through 300 or so eBay ads to
prove a point? If you have a net browser, you are welcome
to do so. Be sure to check the thousand or so closed
auctions as well. Check rec.amateur.radio.boatanchors and other
related forums for ads seeking unassembled kits --DeJa news will
aid in you this search. I am not
here to do homework for you. Especially for someone who
needs to hide behind an "anonymous" signature.

I think you forgot to figure in the electrical propagation charteristics of
the feedline.
It is likley you will find a 1/4 wave times .66 to get a closer value.
Thats if I remember correctly and you use a feedline with .66 VF.

Interesting. I checked my original posting, and the post I replied
was quoted in part at the end my reply. What are you talking about?

Secondly there were two comments posted regarding value of unassembled
tube kits. The first was YOURS:

"Speaking of vacuum tubes, how much would an unassembled radio kit, one
which uses tubes, be worth today. Probably a lot."

The second post in part:

">
>Speaking of vacuum tubes, how much would an unassembled radio kit, one
>which uses tubes, be worth today. Probably a lot.

Any value is strictly as an antique. I don't believe there
is much value in antique electronic kits, however.
I know there are some folks into antique radios, but
I don't think it has the following and $$$$ that many
other antique specialties does.

Bill K2UNK"

My response, with quotes from the post I was commenting on:

"For a cheap education, check the going eBay prices
for unassembled Heathkits. What you believe is not
based in fact.

> I do admit that there are ALWAYS exceptions!

That doesn't make much sense to me. With fill in the blank, it was
either W9NT, or it was gibberish. The blank had to be filled exactly as
sent: CPY, not COPY, for example. With multiple choice, K9NT or W9NT
requires you only copy the first letter correctly.

In either case, I agree with you that he can copy code, or he can't. 5
wpm is not at all difficult. I copied 100% on my Morse test. The odd
thing is, you can still pass the test if you miss both callsigns. On the
air, you missed the call if you don't get the callsign.

Due to an increasing lack of participation, the Sunday morning on air
meetings of the ANARC SWL Ham Radio net have beem suspended for the summer,
and may not return in the fall.

Dave Kirby, N1DK posted this up on the #SWL IRC this morning:

************************* STATEMENT ************************************
After careful consideration, Al NN2U, and myself Dave N1DK, have
decided to put the ANARC SWL NET into Summer hiatus. As you are aware,
check-ins on 7240khz have been NIL for quite a while. 7240khz, being inside
the Amateur Radio bands, is designed for 2-way communication and not
broadcasting. True, as long as there's more than one person on frequency,
it is considered 2-way communication. But two people, in my opinion, does
not constitute a net. I am aware that there are many SWL's that listen to
the net and contribute their loggings each week. To those people, I say
thank you very much for your participation during the past 11 years. I'm
sure a lot of fingers will be pointed as to what or who is to blame for the
low turnout on frequency. My e-mail box is full with theories. I think it
is a combination of many things. The Internet has wealth of information on
SWL'ing, so Al and I are working on keeping people updated on the swl
scene, via the Internet. A weekly real audio file to be posted on my web
page. Keep checking my web site for details. http://www.n1dk.com Al and I
will attempt to resurrect the 7240 ANARC SWL NET at some point in the Fall,
possibly September or October. Meantime, There's a lot of activity in IRC
chat channel #SWL.

Absolutely correct.... but I was not commenting on electrical Vs mechanical
length. Only on 1/4 vs 1/2 wave. You must take into consideration the
propagation factor (typically 0.66 for lots of cable) to go from electrical
to mechanical size. Good comment.

1960. directional accuracy of 25MHz signal detection

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-25 00:00:00 UTC
From: rjz7636@csDOTrit.edu
Message-ID: <372357d5.0@isc-newsserver.isc.rit.edu>

I'm not sure if this is the proper place to ask this, but it's the closest I could find.

A friend and I are currently working on our senior design project in computer engineering. We are looking at the feasibility of using three model RC transmitters, probably on three different channels of the 25 MHz band, as beacons to calculate a position off of. The problem is that we have no experience with this type of equipment and don't know how accurate this would be over the distances we will be working with. (less than 5 meters) We don't need a detailed analysis at this time, just a general idea of if it would be possible to use this set up with a vehicle about the size of an RC car (about 36 cm x 25 cm), and if we could get reasonable accuracy from it.

Thanks for any help.

PS please copy me a reply by e-mail as well, as the news feed here can be flaky at times.

0.66 applies only to solid polyethylthene lines of any
impedance.

If foam-filled or expanded, or disk-supported, with air
space, then a higher VF will apply. Could be as high as
0.94.

>Can you begin to imagine how many people would have been killed if they didn't
>ban concealed weapons in NYC???

It is easy enough to find out. Just look at the murder rates in NYC before and after the Sullivan Act was passed. You won't like what you find, because the per capita murder rate was *lower* before the Sullivan law (compare 1895 with 1995). Assaults, burglaries, and robberies were lower before the Sullivan law too. The same thing happened more recently when DC enacted a gun ban. Criminal activity is discouraged by an armed citizenry. That's been proven time and again. When Florida enacted a concealed carry permit, rapes and strong arm robberies declined. England is a recent case in point for the other direction. After the draconian gun ban, violent home invasions are up 800%.

>Can you imagine how many people would have been killed if kids were allowed to
>carry semi-automatic weapons to schools in their trench coats in NYC???

Prior to 1968, anyone could buy a gun by mail order, including the semiautomatics some people seem to fear so much, with no waiting periods, background checks, etc. They were cheap too, with a 1911A1 .45ACP going for about $25, and a 9mm P38 going for about $20 from the large mail order dealers. There were no such things as gun free school zones. Many teens kept rifles or shotguns in their pickups parked in the school yard (not in NYC of course). Yet, incidents like those we've recently seen were virtually non-existent. This is a clear indication that easy access to guns is not the factor which determines whether these sorts of violent incidents will occur. The truth is, guns were easier to get years ago, many kids had them (legally), yet the sorts of violence we see today was almost unheard of in that era.

What has changed is not easier availability of guns (availability was easier then, at least *legal* availability was easier). What has changed is the willingness of people, particularly
young people, to commit violent acts. If we want to stop violence, we have to look at that problem, and solve that problem, which is at heart a people problem, not a thing problem.

The largest mass murder in US history was committed by a young man using a gallon of gasoline to firebomb the only unlocked entrance to a crowded club (in NYC). Availability of guns isn't the cause of violence, and guns haven't been the instruments of the worst violent acts committed in the US. If we want to solve the problem of violence, we have to concentrate on the reasons people commit it, not on the methods that they use.

This is a complex and difficult problem. People want simplistic quick fixes, but there are no simple or quick fixes to this problem. One clue, however, is to look at what was different 50 or 100 years ago. That way we can get some idea of what has changed to cause our society to produce so many vicious little animals (the bulk of violent criminal
activity is commited by people under 24). Perhaps the biggest change was that in an earlier time it was recognized that parenting was a full time job, and one parent stayed home to do it. That's not a politically correct observation, but I think it cuts to the heart
of why so many children are now so wild. There are many other reasons, of course. We've "mainstreamed" the mentally ill onto our streets, we've forced together cultures with different values, we operate a rotating door justice system, we've made sure crime pays with our war on some drugs, etc.

We've created a pervasive climate for violence to flourish, and we are reaping the results of that. The only way, short of creating a police state, to solve the problem of violence is to
address the reasons it occurs, and correct the things we have done to foster it. What we do not want to do is to remove people's most effective tools for resisting violent attack. That
would unleash whatever limits the vicious animals among us have by assuring them that their victims will be helpless to resist. Ask yourself how different things would have been in Littleton if every adult in that school had been armed (illegal thanks to the gun free school
zone law). Now look at what they're actually proposing, more security cameras, as if a camera
is any defense against someone intent on mass murder. A camera might deter a shoplifter, but not someone intent on mass murder. Once again, the emphasis is on things rather than on dealing immediately and effectively with the people who are intent on doing evil.

On another front, are the parents of the vicious kids in Colorado, and Arkansas, and Kentucky responsible for what their kids did? YES THEY ARE! But it is unlikely that they will be held accountable. If you have a vicious dog, you are liable if that dog attacks
someone. You can even go to jail for failing to leash or muzzle the animal. But parents are allowed to escape the responsibility for their vicious little animals' actions. That's not right, and it needs to change, right now. When parents fail to properly supervise and control their children, they should be held liable for the actions of those children just as if they had pulled the trigger themselves. That might cause parents to take their responsibilities more seriously.

Hey Joe,

Written a good FFT PSK algorithm lately? No? Yes? How about all you other 'old timers'? Why not? Too difficult? Hey, it copies when you cannot even make out the signal, and with very little bandwidth.

Food for thought.

1968. VHF radio tech needed in CA

The place I work at has an opening for a VHF tech to repair marine fixed mount and handheld radios. Great job for a ham with radio repair experience. The position is full time, temporary. Located in Hollister, CA. Anyone interested can send me an e-mail.

4/25/99

This thread started when one guy "Hate@spam.org (radiate)" baited the group with his post about CW whinners and look what happened. He must be having the last laugh.

Joe, I agree with your post. I think a technical hurdle would be far
more value to amatuer radio, than the antiquated morse hurdle.

I have a virtually new FT-736R with both 6M and 1.2GHz modules installed.
Orignial owner, purchased about a year ago, one of the last. Absolute mint
condition and perfect operating condition -- used little. Also has FM CTCSS
module installed. To be sold only as complete unit as listed -- the ultimate
in VHF/UHF/satt radios. Serious buyers only please! Asking $2000 (original
discounted retail more than $3000) and has both the owner and service
manuals. - dont want to sell, there will never be another VHF/UHF box like
the 736R but cannot keep the investment waiting for Phase 3D.
Expanding shack in other areas. Free 16 element yagi (commercial) with
purchase!! ($100 original cost).
Contact Bob / N6MTU / email: magill@ix.netcom.com --- will call and discuss
with serious buyers.

SB DX @ WW $OPDX.406
Ohio/Penn DX Bulletin No. 406

The Ohio/Penn DX PacketCluster
DX Bulletin No. 406
BID: $OPDX.406
April 26, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & The Golist, N2OO, N4GN, W4AU, N9JR, CT1AXS, DJ5AV & DX News Letter, DL2RUM, DL6MHW, EA5GMI, F5NOD, F6AJA & LNDX, G4BUE & DX News Sheet, I2WIJ, I4UFH, IK1QBT, JA8VE, JM1LJS, OH2BH, ON4ASW, UA0SJ, 9K2HN and ARRL DXCC for the following DX information.

THE HOT DX TOPIC OF THE WEEK! P5, NORTH KOREA. Well known DXer Martti Laine, OH2BH, has once again surprised the DX Community. Martti was able to be active as P51BH for a very short time on April 21th, for about 2 hours. During Martti's short operation, he was able to make 263 QSOs. The operating was done from a telecom center. Were some North Koreans climbed a 150 ft. tower to hoist the antennas. Martti states that "the antennas were left right there together with the Yaesu FT-847 equipment. It is just a matter of switching the power on - when the time is ripe - to allow North Korea to join the ranks of amateur radio." In short (from Martti's press release), "the operating was done between 1436-1640 Korean Time. First JA QSO was JA2DO, Europe OH5MBF, Oceania KH6WU and the United States W6WKE. The operation covered 14 MHz CW and SSB plus 21 MHz SSB. The documentation will be sent to the ARRL shortly, and QSL cards will be released from the OH2BH Finland address as soon as possible." Martti has currently left North Korea on Thurday and is back in Beijing, China. The complete press release by Martti, along with a special DXCC Press Release, will be sent out to all OPDX InterNet Subscribers as an additional bulletin. ADDED NOTE: Audio from this operation may be heard on 9K2HN's home page. The URL is: http://www.qsl.net/9k2hn

SPECIAL NOTE FROM EDITOR. Last week we had an unfortunate thing happen to OPDX.405 which was completely out of our hands and responsibility. Some (not all) OPDX InterNet Subscribers received multiple bulletins, but the hardest hit seem to be the NJDXA's DX Reflector with each subscriber receiving about 19 bulletins. Let me asure you that OPDX only sent out

one bulletin (check the headers -- dates/times/Message ID were all the same). Even BARF-80 BBS's (system where the bulletin is sent) mail log shows one copy left the system. After I learned what happened on Monday (and receiving many complaints), I sent an announcement that I would look into what happened and explain the problem did not come from this end. During some investigating, it was explained to me by local ISPs that the following "may" have happened: "It has become known a major backbone for SMTP mail, a hub for hundreds ISP's processing over 30,000 E-mail messages per minute, had its hub in Chicago go flakey starting Sunday in the early afternoon..... Knowing how SMTP mail is delivered, it may be that the Chicago hub had failed to acknowledge received E-mail and ISPs were retransmitting over and over again waiting for an acknowledgment."
I want to thank the many who were very sympathetic to the situation.

3C, EQUATORIAL GUINEA (New IOTA!). The "DX News Sheet" reports that Jean, TR8XX, is planning to be active May 22nd from Corisco Island (in the Rio Muni Province Group). His length of stay is not known, but more details are to follow.

3D2, FIJI. Look for Mat/JA1JQY, Sasi/JA1KJW, Kaoru/JA3MCA/1 and Kuni/JA8VE/1, of the Yamato ARC (JA1ZEK), to be active as 3D2SH, 3D2HI, 3D2TK and 3D2KZ, April 30th through May 1st. Suggested frequencies are:
CW - 1827, 3507, 7007, 1007, 14007, 18077, 21007, 24897, 28007 and 50107 kHz
SSB - 3798, 7080, 14197, 21270, 24937, 28470 and 50107 kHz.
Please QSL via their home callsigns. The group plans to move on to Tuvalu after this operation (See T2).

9K, KUWAIT. Mohammed Al-Holi, 9K2DR, KARS Manager, announced that the DX group of Kuwait Amateur Radio Society have currently organized a trip to the Kuwait Island of Faylaka (IOTA AS-118) for the third time. This operation should have started by the time you read this and will last until April 30th. Activity will be on all bands using the callsign 9K2F. QSL via 9K2RA. The direct address is: Kuwait Amateur Radio Society, P.O. Box 5240, 13053, Safat, Kuwait.

BI5, DONGTOU ISLAND (New IOTA). Just a quick reminder. The BI5D IOTA DXpedition team will be active next week from Dongtou Island in the Zhejiang Province Group, April 29th through May 3rd. Please refer to OPDX.403.

FO, MARQUESAE AND AUSTRALES ISLANDS. The "LNDX" reports that Alain, F2HE, will be FO/F2HE from Marquesas starting June 4th. In July, he will return to Tahiti with stop overs in Tuamotu Archipelago (OC-066) and Raiatea (OC-067). In August, he will be in the Australes on the Island of Tubuai (OC-152). He will go back to France in early September.

FT5W, CROZET ISLANDS (Bad news!). Gil, F5NOD, reports that as of April 17th, Gilles's (FT5WH) Transceiver went QRT! While he was transmitting, he saw a "flash" inside and can't transmit at all. He is looking for a solution and is absolutly disappointed. Gil will keep the DX community updated.

HK, COLOMBIA. Gerard, F2JD (now ex-HK3/G0SHN), has received his new callsign HK3JBR. He has been active this past week on 80 meters around 3794 kHz after 0400z. Gerard will be here for 2 years. See OPDX.400 for more details.

IOTA NEWS.....
NEW IOTA. The "LNDX" reports that Christian/6W1QV, Jean/TR8XX, Alain/ TR8CA will be active as 3C8XX from Corisco Island from May 22-30th. They will have two complete stations, one on CW and one on SSB. QSL via TR8XX.

AS-049. Takeshi, JI3DST/6(7N3UXO/6), will be active from Tokara Archipelago, April 28th through May 4th. Activity will be on 17/15/12/10 meters SSB. QSL via JI3DST, Takeshi Funaki, 2-18-26 Hannan-Cho Abeno-Ku, Osaka-City Osaka 545-0021 Japan

AS-067. Syouzi, JA4PXE/6, will be active from Kusagaki Island from April 29-30th. Activity will be on 40-10 meters SSB. QSL via JA4PXE, Syouzi Kuwabara, 1-75 Midori-Cho Tokuyama-City Yamaguchi, 745-0075 Japan.

EU-038. Marcel, ON4ASW, reports that the club station ON4NOK (UBA section NOK) will be active from the Island of Texel, in the Netherlands, during the IOTA contest July (23), 24 and 25th. Their callsign will be PA6TEX. Activity will be on CW/SSB. Also, look for them to be on the WARC bands. QSL via ON4ALW.

EU-074. F5JOT, F5TBF, F5LGQ will be /P from Brehat Island from May 8-16th. They will be active on 80-10 meters CW/SSB.

EU-074/EU-105/EU-157.
F5SNY and F5PFT will be /p from Batz Island (EU-105) from May 3-5th, Brehat Island (EU-074) from May 7-9th and Cezembre (EU-157) from May 10-13th.

NA-136. Tony/WF1N and Lou/W1DIG (ex-KA1DIG) will be on Pot Island in the Thimble Island Group, May 21-23rd. Their operation will start around 1500z Friday and end about 1800z Sunday. Operations will be with a tribander and amp, on/near the usual IOTA frequencies, SSB. QSL to home calls direct (SASE Please) or Bureau. Tony can be contacted at: megahertz@webconn.net

L2, ARGENTINA. LU1FI is another station that will be active as L21FI during the celebration of the 75th aniversary of the contact between Carlos Braggio (r-CB8) and Ivan O'Meara (z-2AC) in 1924. QSL L21FI via LU1FI by the bureau or direct to: Montevideo 441 P.5, Zip 2000, Rosario (Santa Fe), Republica Argentina. For more details or questions, send an E-mail to: lu1fi@hotmail.com
Also, look for "Luc", LU7EC, wto be active as L27EC. QSL via LU7EC, Lucas Mariano Elichagaray, C.P. 2703, Carabelas Bs As, ARGENTINA (with a S.A.S.E.) or bureau.

NEW WEB SITE AND NEW SERVICE. John, K1XN, reports that "The Golist" has a new Web Site and some new features on the Web. The Web site is at: http://www.itis.net/golist/
The site now has NEW features for Guests and Registered Users, such as "Online Look ups from the Golist database". This database will be updated periodically during the month. OPDX InterNet Subscribers will receive the complete details and press release by John as an additional bulletin.

QSL INFO AND NEWS......
Fabio, I4UFH, reports that all QSLs for the 5H1FS (1997) and SV9/I4UFH (1998) have been processed (direct and bureau). So, there are no more backlogs of QSLs, and if anyone doesn't receive their direct QSL in 2 weeks, please send it again.

T9 BUREAU. Joe, N9JR, reports that the Bosnia-Herzegovina QSL bureau is now fully functional. With the T9 QSL bureau working, Joe will no longer be serving as T94B's QSL Manager effective April 1, 1999, and all QSL requests should be made to him via the T9 bureau.

Tony, IK1QBT, reports that the following logs for his activities are now available on-line at: http//www.freeweb.org/freeweb/ik1qbt
3A/IK1QBT 1993/1996/1997/1998
TK/IK1QBT 1994
4U0ITU May 13/14th and 20/21st (1995, only CW)
IP1/IK1QBT IA1/IK1QBT from IOTA EU-083 -- 1996/1997/1998
ID9/IK1QBT from IOTA EU-017 -- 1997

CQ2S was a special event station that was active this past weekend to commemorate the 25th anniversary of the "Revolution in Portugal". SSB activity was by CT1AXS and CW/RTTY by CT1FMX. QSLs go to CT1AXS for SSB QSOs and CT1FMX for CW/RTTY QSOs.

Yuri, UA0SJ, reports that, because of problems with the mail to please send mail only direct using "acknowledgement guarantee". Send request with SASE and coupon IRC or dollars to: Yuri A. Maltsev, P.O. Box 2304, Bratsk-City, 665700, Russia. Yuri's E-mail: ua0sj@windoms.sitek.net

SPECIAL EVENT. Commemorating the 500 anniversary of the University of Valencia, a special callsign has been issued which will be on the air April 30th through May 2nd. The callsign will be EG5UV, and a special QSL card will be available for all contacts. There will be two operators: EA5DFV and EA5GMI. Please look for them on all bands including the WARC bands. QSL via EA5GMI, preferably via the bureau.

SPECIAL EVENTS (French)......
Look for TM0AR to be active during "The Festival of Art and Technologies" from May 9-16th. QSL via F5TJC.

Look for TM0AC to be active during the 50 years anniversary of the National School of Civil Aviation (ENAC). The special callsign TM0AC will be on the air from May 15-19th. QSL F6ITD via bureau.

SV9, CRETE. Bob, I2WIJ, will operate as SV9/I2WIJ during his summer vacations, July 12-26th. He will also participate in the IOTA Contest as a Single Op (24H CW) DXpedition Mode entry. During his first week there, he will be mainly on vacation. During the second week he will be more active on the radio. He will be using a Cushcraft R7 and ICOM IC706 MkII. Look for him on the usual IOTA frequencies and the WARC Bands. For more news and updates, also on-line logs after his operation, check out Bob's Web page at: http://www.qsl.net/i2wij/

T2, TUVALU. After their 3D2 operation (See 3D2 above), look for Mat/JA1JQY, Sasi/JA1KJW, Kaoru/JA3MCA/1 and Kuni/JA8VE/1, of the Yamato ARC (JA1ZEK), to be active from Funafuti Atol May 2-9th. They will sign T22JY, T22KJ, T22TK and T22VE. Suggested frequencies are:
CW - 1827, 3507, 7007, 1007, 14007, 18077, 21007, 24897,
28007 and 50107 kHz
SSB - 3798, 7080, 14197, 21270, 24937, 28470 and 50107 kHz.
Please QSL via their home callsigns.

T30 & T33, WEST KIRIBATI AND BANABA ISLANDS. A German team from the Berlin DX Group will go in October-November (1999) to T30 and T33 for three weeks. The team consists of 11 members, 8 which are ham operators. The operators are: Tom/DJ6TF, Wolf/DL2NWK, Tom/DL2RUM, Tom/DL7BO, Sigi/DL7DF, Frank/DL7UFR, Rudi/DL7VFR and Marianne/DD6UYL (YL operator). The rest of the team consists of two XYL's and one YL (Norma, Christiane, Sabine). All of the operators have DXpeditions experience since 1990. They expect to arrive on the Island of West Kiribati on the morning of October 19th. Their licence is in order, but their callsigns are still not assigned. They will try to use two callsigns, one for SSB and one for CW/RTTY. They will have four complete stations with PAs with them (actually they will have six TRCVRs with them). They may run three stations around the clock and all stations simultanusly. The team has three beams antennas (a 5 element Tribander, a 3 element Tribander and a 3 element for WARC. They hope to get a second WARC beam). They will also have two fullsize 1/4 verticals for 80m. It is planned to erect both antennas, and phase it for better gain. These antennas are also used for 160m. For 40m and 30m, they will also use verticals. They hope to find enough space on the islands to erect all antennas. They plan to be active on CW/SSB and also on RTTY. After about a week of operation, four of them will go to Banaba, with half of the equipment. The ship for their 2.5 days of sailing is already booked. They have everything they need (Water, food, fuel, generators, beer, ...). It is planned to be on the island from October 28th through November 2nd. In Banaba, there is a guest house all ordered, but they will need special permission to visit the island. They will run with two complete stations with PAs and a third Low-Power staion for "local" QSOs with JA and NA. They will depart from Kiribati the morning of November 11th. For more details and update-to-date info, check out the Web site at: http://www.qsl.net/DL2RUM

T8, BELAU. The "DX News Sheet" reports that Hiro/JH3FJG and Kenji/JI3DLI will be active July 20-25th, as T88JR and T88DX. Activity will be CW/SSB/FM on 80-6 meters. QSL via their home callsign.
Just a quick reminder and update to look for Misao/JJ1DWB, Hide/JM1LJS

and Hiro/7N1KAE to be active as T88MT, T88LJ and T88YH April 27th - May 6th (Refer to OPDX.403). Hide, JM1LJS, informs OPDX that he will be on 3795 kHz (April 27-May 1st) everyday between 2000-2100z.

XU, CAMBIDIA. Jani, YB0US, will be active from here as XU7AAP, April 22-26th. Activity will be on 80-6 meters (look for him on the high end of the band). QSL via N2OO, Bob Schenck, P.O. Box 345, Tuckerton, N.J. 08087 USA.

YK, SYRIA. Michael, DL6MHW, informs OPDX that he plans to operate as YK/DL6MHW some time this week. He will be attending a conference on April 28th, but wants to operate at least 6 days on the air. He wants to demonstrate PSK31 and Pactor to Syrian amateurs. He will become active with the help of YK1AO, Dr. Omar Shabsigh, who is the president of the Technical Institute of Radio, the Syrian amateur radio society. According to information by Omar, Michael will use the call YK/DL6MHW for his visit. He will be operating SSB and CW all bands, depending on available antennas. Michael states, "The main goal is to support as many as possible stations with an new one (YK is somewhere on the Top 30 in the World and North America). For that I will focus to one main band, if pile-ups are booming." Check out his Web page for details/updates at:
http://wwwiti.cs.uni-magdeburg.de/~hoeding/hamradio/yk_main.html

ZK1, NORTH AND SOUTH COOK ISLANDS. Look for the Wolf/DL2SCQ and his wife Ann/DL1SCQ to activate a few IOTAs from these two islands during the month of August. Their callsigns will be ZK1SCQ and ZK1SCR and their planned schedules are as follows:
August 4-8th - Rarotonga Island (OC-013), S.C.I.
August 10-12th - An island in the Aitutaki group (OC-083), S.C.I.
August 14-17th - Mangaia Island (OC-159), S.C.I.
August 20-25th - Manihiki Atoll (OC-014), N.C.I.
August 28-31st - Palmerston Atoll (OC-124), S.C.I.
Bands/Modes activity were not mentioned. QSL via DL6DK, Peter Voilts, Uhlandstr 28, D-59192 Bergkamen, Germany.

Well, let us narrow it down to one essential Q, is
it necessary to KNOW the code
for using HF and Phone ?
There are opinions that says theese are to prevent
cb'whiners to get on the air, and
i might agree to that. Nevertheless, globally seen
there is a drop in the number of 'hams'
and i belive one of the reason is the lack of PR
reagarding this matter, not because CW
is a demand !
When you are taking the exam, you have to be able
to send and receive code by a certain
wpm, and ofcourse some extra theory too. After say
you are become a family-man or busy at work
you take up your old hobby and is once again QRV,
but what about your code then.....?

After some years i guess that the majority has
forgotten their skills rather its 5wpm or 25wpm !
Fair that they can use their equipment then ? I
mean not, if i could decide, there should be
regular exams
in the code for at least once a year, since this
is SO necessary to be able to talk on HF !!!

Then this would happen :
A- many would fall apart and loose their call.
B- the interest for morse and skill would all the
time be at peak and we wouldnt risk any danger if
emergensy SOS or eqv were heard !

I'll put my head out for the gulliotine for this,

I'd like to get a schematic or plans for a pre amp to put at the antenna
for
around 137 MHz for use with the Meteor and NOAA satellites. I'd be
happy
to purchase plans or one already built. Any help is appreciated. Thanks

in advance. Larry, N1UKX

You are implying that you have a right to set a standard value over all HAM wannabees
and then have a right to deem a certain amount of work to meet that value.
As you know, the FCC is the only one who has a right to set these values and the amount of
work
needed, not you.
Sit there and get upset all you want, resent us for things being easy, but the fact is, FCC
will be dropping
code from the requirements in less than 3 years and will also be updating its tests to
reflect modern times instead
of their current tests which are geared more for those who wanted to became HAMS in the
1950's - 1970's.

Remember, it takes a pretty screwed-up, illogical person to enjoy CW in the first place as all they have to do is pick up a microphone.
This explains why we have alot of oddballs in here with screwed up, old fashioned thinking, which is completely in reverse with the rest of the world.
Thank goodness that most of these people are dying out of old age.
For those who carry the carry this torch of illogical thinking, get out of the world's fast lane and move aside as you are holding up everyone.

As much as I am opposed to morse code test
requirements I find this statement to be just as
nuts as some that profess that everyone should love
or learn CW. People enjoy whatever turns them
on. I can drive down the highway and get lots
of people that wave at my antique car...yet there
are others that haven't a clue. I care not a bit
about what motivates anyone to like CW. That's
their interest and I make no judgement as to the
person's mental capability because of it... neither
should anyone else.

>This explains why we have alot of oddballs in here
>with screwed up, old fashioned thinking,
>which is completely in reverse with the rest of the world.

The only thinking that is screwed up is related to
the test requirement. Let's keep this discussion
focused on that only.

Cheers,
Bill K2UNK

HI. I am looking for a board to do the same with some old monitors I have. How about the Radio Electronics/ Harmony Research converter that was mentioned earlier?, 1.would this work with a CGA, EGA or a VGA monitor? 2. Are some CGA monitors TTL and others Analog 3. Could such a circuit work on a SUN /Sony fixed sync (lowest res 1024 x 768) workstation monitor (I have used this on a PC by just modifying the cable and adding a capacitor to combine the sync wires.) 4. What is the resolution of a regular 19" colour TV vs a CGA monitor with composite input or a VGA monitor with an adapter? 5. How much improvement would you get by feeding say a satellite receiver composite video output to the TV with a composite input vs going through a vcr input then via the antenna connection to the TV? 6. Finally has anyone seen another converter other than the Harmony one.

Thanks.
Orville.

It looks like the shamed and defrocked dentist Dr Hate, AKA "Banana Nose" Charlie has started spreading his venom on the internet. It seems someone gave him an old worn out computer and after a months of trying he has made his apperance on the web to spread his hate and bigotry on these pages. Of course he has cut back on his active deliberate inteference on twenty meters. Do you know why? One answer to that question Mr Riley Hollingsworth. Dr Hate knows he can not get by with the violations he used do every single day on the amateur bands. So here he is, trying to do it on the web. Won't work "Banana Nose". We can not hear your foolishness here. So talk about the children of people who get your goat. Thats about all you are good for you Radio Rat. Riley will prune that tail for you. Then you will be like your Master the shamed Richard Whiting, WB2OTK, By the way he lost his vanity call. So keep it up, You are next!!!!!!

This sounds similar to the logic used by fraternities, some parts of the military, etc. for the continued practice of hazing: "WE got the crap beat out of us when we joined; we deserve to beat the poo-poo out of someone, too!"

If knowing Morse code is actually USEFUL for something these days, then by all means keep the requirement. But if nobody uses it, why bother? Somehow, I don't see extracting a pound of flesh from new recruits as a worthwhile reason.

>I got past the 13 wpm CW requirement in 91 and,have never used CW since

So by your own admission, knowing code is useless.

>[The code requirement] should be replaced with something that will separate the serious radio

>we have at the moment.

Why are such "hurdles" necessary? One can kind of understand it with the medical profession - it pays extremely well, and it's in everyone's best interests to weed out the gold-diggers. However, ham radio is a hobby - it pays nothing. In fact, it *costs* you some pretty serious money! The only benefits of participating in it are those derived from the activity itself. If you're not "serious" about it (whatever that means) you'll get bored and find something else to do, i.e. you'll weed yourself out; won't you?

For the record, I am not a ham radio operator, but am considering becoming one at some point. Thus, barriers to entry (and the rationale behind them) are of great interest to me.

The subject line says it all. A photo copy will do. PLEASE
NO $20.00 manuals!
The counter is probably not worth $20.00 when working! (:'>

Thanks for your kind attention.
Randy KB8ASO Milan, IN.

1995. MFJ 1798 performance: very anecdotal and preliminary

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-25 00:00:00 UTC
From: Michael Young <nobody@all.org>
Message-ID: <925082145.828.22@news.remarQ.com>
Source record: 144910

I stand corrected on my earlier pessimistic assumptions about the MFJ 1798. Today, on my second QSO, very first phone contact, I got a 59 report from Chaco, Argentina on 100 watts on 10 meters. My QTH is near Chicago, IL. First QSO was on 15 meters to Cupertino, CA, with a 569 report, also on 100 watts. Two countries and a new state within an hour of starting operations. :) Quite frankly, I'm stunned.

Michael.

I am neither for keeping or eliminating the code. I will point out that thousands of DXers, ragchewers, QRP operators, Contesters and homebrewers operate on CW, some exclusively. CW is often referred to as the "gentleman's mode" in ham radio. Folks that claim that CW is outmoded and not used are not aware of the facts, and stating opinion rather that facts.

"Hurdles" are necessary to seperate Ham Radio from other unlicensed services such as CB. Note that the technical portion of the test is revalent to ham radio since hams are permitted to build, design, align and
adjust their own transmitters--something that is not permitted in any other class of radio service. Operating a ham radio transmitter implies some knowledge
of the theory behind its operation.

Most of the "NO CODE" whinning I object to comes from those who something for absolutely nothing; no code, no theory. That class of license already exists on 27 MHz.

Regards

Pete

Pete ... I believe that if you were to review the past couple
of years worth of postings here, you'd find that it's NOT the
no-coders and no-code-test advocates (like NCI) who espouse or
seek a "no theory" situation. It's simply a red herring that
the procoders toss out from time to time in an attempt to
generate FUD and division.

In fact, if you'll visit http://www.nocode.org and look under
the articles section for the copies of our comments in WT 98-143,
you'll find that NCI told the FCC that N/T/T+ should have to
take the "missing written element(s)" to upgrade to General and
Advanced should have to take the "missing written element" to
upgrade to Extra (we proposed 3 classes T/G/E).

Now, the ARRL proposed "instant upgrades" for N/T/T+ to a 5 wpm
General ... but they tried to hold on to as much code testing as
they seem to think they might possibly persuade the FCC to keep
with their proposal for 12 wpm for Advanced and Extra (they want
4 classes so the OT extras don't get PO'd at "losing status"),
so they don't get hauled over the coals like NCI. NCI is the group
that gets accused of being the "no theory" bunch ... which is
a bald-faced lie ... which is a typical tactic of many procoders.

Check it out for yourself ... the documents NCI filed with the
FCC don't support the bogus assertion that we favor a "no theory"
situation AT ALL ... in fact, they prove just the opposite.

73,

Homebrew a stand alone PSK31 decoder/keyboard yet? While you're at it, make it cheap enough and rugged enough to ship gratis to deprived economies. Should you get an honorary Extra license for doing this? Why not?

I'm trying to see your point, but all I see is contentiousness.

Michael.

Certainly he didn't say this! He said he (Joe) hasn't used CW since
passing element 1B eight years ago. Anything beyond that is your
speculation.

> do, i.e. you'll weed yourself out; won't you?

No, no, no. Money isn't the issue at all. Medical doctors are trusted
with public life, health, and safety. For hams, sharing the limited
airwaves wisely is at issue. CB'ers prove you can operate the appliance
without any special training or knowledge. Heck, I could have unpacked
an HF transceiver and got on the air without special training. By law,
though, I am allowed to use a portion of the precious airwaves if I can
demonstrate that I understand misuse can cause harm or interference to
other users. More privileges will be allowed when I demonstrate more
knowledge and ability. If Morse proficiency demonstrates only personal
commitment, then maybe that's all it needs to mean.

I live in the suburbs now, and parallel parked maybe twice in the past
ten years. Indeed, there are very few places to park curbside here. Most
driving tests still require you to do this sufficiently well. This, too,
might be considered HAZING. I think it only means you should know how to
park without obstructing traffic, or banging into fenders or sign posts.

Michael.

Greetings Billl

If you check some comments made earlier (in this thread
I believe) someone suggested eliminating the code but
beefing up the theory portion of the exam--this raised more
negative responses.

Regardless what elements of the test that remain, you will
continually have complainers--whether the subject is code,
or not seeing the need to learn theory once the code barrier
is lifted.

The no-code people are not the cry babies. They don't have a problem
with people learning code or using it. It is the Code fanatics that cry
when people don't want to learn or use code.

Go ahead and talk nasty about no-code operators in a secret code that
they can't understand. They don't want to hear that kind of message
anyway!

I would like to state ,here and now,for anyone who wants to read
this post,that I am not against No-code licensees.I know many who
entered the hobby as NCs and the vast majority of them are very good
ops and most went on to up-grade to the upper class licenses.I would
welcome eliminating the CW requirements altogether,but only when
provisions are made to replace CW with more advanced theory.Also,I
would like to see a probationary and mandatory training period (where
operating procedures are practiced ON THE AIR,under the supervision of
an 'Elmer') required for all new Amateur ops.

Speed up the character rate and compensate by lowering the WPM
speed.This will result in a faster word but with more space between
the words.It worked for me.Good luck.

I cant disagree with that,as I last looked at the Novice/Tech theory
in '91'.However,I can state that any group,club,orginazation etc which
administer exams,and are turning out operators without even the hint
of how a repeater works,are doing the hobby a great injustice.This
wouldnt happen if there were a mandatory training period required
before obtaining a license.
Also,I wish to appologize the the new Ham who posted the question,as
its not his fault many of the clubs are nothing more than License
'assembly lines'.

I must agree that the 'contesters' are the most rude ops on the
air.Thank GOD most of them never key a mic except at contest time.

The CW ops are the most well mannered of any I have run across. I am always run off of the fone bands by all the bad attitudes, swearing, jamming, frequency battles etc. I see the same attitudes on the news groups. I really don't care what they do about the CW tests. Preserve the CW subbands for the Gentlemen and Ladys of the Amateur Service and all (some) of the Fone op's can continue setting bad examples for the new guys like myself to be disgusted by. See you at the bottom of the band.

I am on my way towards getting my no-code license because, I'm afraid,
that's as far as I will ever progress. I have tried for years to lear
Morse, but some glitch in my hearing or noggin or something will not let me
get the knack of it.

When I was little (30-something years ago), I used to be glued to my
step-dad's shortwave, sending postcards (I must have spent a forturne
sending cards around the world).... I desperately wanted to be part of that
world, I had a telegraph key to practice with, I specifically tuned into the
morse broadcasts so I could try to develop an ear for it...to no avail...it
just wouldn't happen. I dropped away from shortwave for years and have only
recently become aware that I now have an entry(albeit a limited one) into
the world of my youth.

I have nothing but admiration for those who can pick up morse code. I wish
I could.

William

I am sorry, but you need to read much more carefully.
I have stated SEVERAL times that I have no problem
with the elimination of the code test. What I DO have
a problem with is the assertion that CW is both "dead"
and "outmoded" on the Amateur Bands.

Secondly, William, please explain to me how increasing the
number of hams is going to do anything to save the bands
from commercial interests? What good was served by
the millions entering the CB ranks during the 70s? Did that
form a more disciplined and thriving service based on
shear numbers?

Karina

I hope the cw requirement is sufficiently lowered or eliminated
so that you may enjoy amateur radio. CW should not be a
barrier to keep those who want to join the hobby to do so.

I know a lot of people who have the same problem learning CW;
and I agree with your observations. Please understand my comments
are directed to those who insist that code is outmoded and not being
used on the ham bands.

Karina,

Get a book published by the ARRL called "Now You're Talking." It has everything you need to get ready for the Novice and Technician written exams. You can order it directly from the ARRL (see www.arrl.org) or any of the big ham radio distributors such as Ham Radio Outlet or Amateur Electronic Supply.

You might also want to find a local ham club in your area. They can be a big help.

Good luck and 73,

Marv

You seem to be confusing "complicated" and "inefficient" with
"sophisticated" ... there have been many posts here (check
DejaNews under Gary Coffman for some excellent ones) outlining
that the variable length characters of Morse are a major reason
why it suffers a performance penalty of at least 9 dB relative
to simple BFSK (Binary Frequency Shift Keying) ... and BFSK is
certainly not the most efficient modulation scheme available.

Hello,

I'm studying to take the no-code next month. I'm using a program called HAM UNIVERSITY on my laptop for practice. It's an excellent software program and I highly recommend it. You can download it from www.zdnet.com . It also has a section for practicing morse code on your PC. Check it out.

Here is the link that will take you straight to the description of the program (if it doesn't work go to the above link and do a search for "Ham University". The program is about 1.5 megs big.

Karina
If you go to the AA9PW web site at
http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html you will find
an online test generator for taking the test for all the classes of ham
license (no code testing) and you can download the program in
java and run the test generator off-line. It really helped me get ready!

Medication might do you some good if you can find the right pill to
grow balls.

I know, don't tell me. You never read the contest schedule in the
Newington News, and you and your one friend in the world were on
your private schedule frequency on 20 meters and CQWW snuck up
on you and although you protested and screamed, nobody even
noticed you were there.... And now here you are screaming on
UseNet and still as Anony-Mouse here as you are on HF. Must be
tuff going thru life being just a little scratchy noise in the
background.

Never mind the antenna, spend the 25K on therapy. First question you
should ask is "Why do I have the urge to preach to the masses and
these strong opinons yet I don't have the balls to sign my name to
them ?". Did the other kids in school slap you every time you said
something and you have this ingrained fear of being slapped or what ?

Two factors:

1. The lack of historical recordkeeping by the North American Indians.

2. British hooligans had not yet arrived on the scene.

>HI. I am looking for a board to do the same with some old monitors I have.
>How about the Radio Electronics/ Harmony Research converter that was
>mentioned earlier?,

>1.would this work with a CGA, EGA or a VGA monitor?

CGA, No. Actually it looks kind of neat, like some special effects
in a rock video (solarization, I think it's called), but not something
you'd use for watching TV programs.
EGA, apparently no, according to the magazine article.
VGA, No.

>2. Are some CGA monitors TTL and others Analog

Yes, back in the early half of the 1980's there were a number of
monitors made to run on both the TV (and CGA) scan rates and on some
of the higher scan rates. The Multisync line, from NEC, among others.
These were premium price monitors that had the advantage that they could
be used on IBM PCs and also on other computers like the Amiga, Atari ST,
Zenith, and various Apple machines that used Analog RGB at TV scan rates.

>3. Could such a circuit work on
>a SUN /Sony fixed sync (lowest res 1024 x 768) workstation monitor (I have
>used this on a PC by just modifying the cable and adding a capacitor to
>combine the sync wires.)

No. The Harmonic Research unit doesn't do scan rate conversion.

4. What is the resolution of a regular 19" colour
>TV vs a CGA monitor with composite input or a VGA monitor with an adapter?

NTSC is a compression scheme. Frankly, it sucks. You can't get more than
100 to 200 discrete color changes in any one scan line. S-Video would be
higher, but not that much.

>5. How much improvement would you get by feeding say a satellite receiver
>composite video output to the TV with a composite input vs going through a
>vcr input then via the antenna connection to the TV?

You might want to ask in one of the rec.video newsgroups or see if they
have a FAQ. Perhaps you'll get some improvement as you'll avoid any
more bandwidth filtering in the TV's tuner and IF, and less distortion
from avoiding the video modulator in the tuner. S-Video would probably
give even more, depending on where they bandpassed filtered the color
information. Also depends on if it's a C-band analog system or a

digital DBS system. With C-Band, it's sent as a composite signal so
you can't get more out of it that was sent in the first place.

>6. Finally has anyone seen another converter other than the Harmony one.

I've seen both Video -> VGA and VGA -> Video converters on the shelf
at CompUSA. About $200. Usually limited to 640x400, as the scan
rate conversion is relativly easy for that mode. Never saw what the
results looked like, though.

I was just wondering why they still keep the Morse code testing requirements if the military doesn't use it anymore and telegraphs are not that common. I think because they stopped it for the marines, there's no point in using it in ham radio either. And if you want to say it is for security, you are not allowed to use codes when intended to obscure meaning.

> What if he wrestled the gun from you and shot you instead of cutting you?

In general, I would not go for a gun when it would be within reach of
a criminal. Additionally, the guy with the knife was about 5'7" and
weighed about 160 lbs. I'm 6'4" and weigh 205

> What if it all started because he had the gun insteads of a knife
> because it was easy for him to buy and carry a gun??

He was too young to legally buy a gun. Many individuals like him rob
people at knifepoint to get the money to buy an illegal gun. If he had
pulled a gun instead of a knife, the situation would have been entirely
different.

> I could go on and on with "What if" and neither of us would have proven

> You never forget how
> defensless you feel when someone has a loaded gun against your head. In that
> case even if I had had a gun I couldn't have reached for it without expecting
> to be shot in the process.

No one knowledgable about guns would allow one's adversary within reach of
the gun. With proper training, you might have had a better chance reaching
for his gun rather than yours.

> Nah...because if we are efficient the hate mongers will not be able to get
> guns and if we are not efficient the hate mongers who hate other hate mongers
> will still be armed.

There are more than enough existing guns to supply criminals for both our
lifetimes. For the next few years, there is no way to get guns out of the
hands of criminals. Any gun control law will simply disarm the law-abiding
citizen and leave him helpless against the armed criminals. For the considerable
number of years that it would take to make gun control work, the law-abiding

citizens would be at the mercy of the criminals. Do you really want that?

> Please understand Cecil that I do respect your opinions and I certainly don't

I have a virtually new FT-736R with both 6M and 1.2GHz modules installed.
Orignial owner, purchased about a year ago, one of the last. Absolute mint
condition and perfect operating condition -- used little. Also has FM CTCSS
module installed. To be sold only as complete unit as listed -- the ultimate
in VHF/UHF/satt radios. Serious buyers only please! Asking $2000 (original
discounted retail more than $3000) and has both the owner and service
manuals. - dont want to sell, there will never be another VHF/UHF box like
the 736R but cannot keep the investment waiting for Phase 3D.
Expanding shack in other areas. Free 16 element 1.2 GHz yagi (commercial)
with
purchase!! ($100 original cost).
Contact Bob / N6MTU / email: magill@ix.netcom.com --- will call and discuss
with serious buyers.

I'm an HAM and also an electronic engineer. I'm also not that old since
I'm 28. I didn`t go "through hell" to learn CW, it`s just easy.
The point is that if one doesn`t have enough patience to learn a simple
and slow CW ability he probably will just end up buying expensive rigs
with tons of watt and burn antennas with them saying probably that this
new 1KW ampli is just great to talk with its neighbours.
This is not the ham spirit imho.
With 10 watts you can work the world.

Yessir, good old Bill and his Prozac top heavy view of ham radio. Whenever someone posts a negative statement or gripe on his self promoting contesting.com, he attaches a little "you did a no-no" shame message and publicly rebukes the poor guy.

You know those big mouth contesting hams who tout what great ops they are, right ?

If they're such great ops, why do they need absurd towers and the rest of us do it with wires ?

If they're such "Gentlemen", why not refrain from pig piling everytime they hear a G or DL on 160 CW ?

Answer: they are actually the truest form of LIDS.

I went for my General upgrade tests yesterday, passed the written, failed the code. Oh well, just have to practice a little more on the code and soon I'll pass it.

So Tom, here's the irony, you know radio theory but didn't master an archaic mode of communication?!?!? I don't think that should prevent you from enjoying a hobby. BTW, was this CW test multiple choice or fill-in. I'm finding that ARRL-sponsored VECs like the fill-in. This is much harder than the multiple choice where you can choose the correct call sign, QTH, if you get part of the code right. Try a W5YI group that uses multiple choice questions. One of these days the ARRL VECs will enter the 20th Century as the rest of the world enters the 21st.
BTW, I'm a tech plus working on the general CW only to shut up the pro-coders. Sorry for this long .02 cents.

That's not always the case. Our local VE team switched to the multiple
choice format 2 years ago. The failure rate went up about 20%. The ARRL
> tests have 2 answers that are so similar(was it W9NT or WN9T?, 45 watts or 40 watts)
Bottom line, if the candidate can't copy the code, they probably won't guess their way to a
passing grade.

That's the ARRL traditional, conservative, head in the sand way. If you
miscopy one character you miss the entire question. I've taken several
multiple choice exams in areas of knowledge that are critical to life.
None of these tests had answer choices that were so similar in content
as the ARRL choices in their exams. And for a hobby?!?!

>Your report does not allow much confidence to be placed in
>the security of communication links between airport
>controllers and aircraft pilots.
>
>A radio transmitter in irresponsible hands is like a gun.
>There should be laws.

There are laws, Reg. In the case of guns, there are over
22,000 state and federal laws, in the case of radio there
is the whole of CFR47. But having laws isn't of much value
when they aren't properly enforced. For example, the much
touted Brady law has turned up about 78,000 felons (actually
only about 35,000, the others were falsely identified as felons
due to the incompetence of the legal system) attempting
to buy a gun, but only 6 have been prosecuted.

With an error rate that high, and a prosecution rate that
microscopically small, the law becomes an ass. With so
many laws, few, if any, people can know whether their actions
are legal or not. Few police or prosecutors can know either.
Passing another law is just feel good showboating.

Misuse of radios to interfere with ATC is already a crime,
but offenders are rarely caught, and rarely prosecuted.
Saying there ought to be another law isn't the solution.
AM radio transmitters, like guns, are so easily homemade
that attempting to eliminate possession of them is impossible
in any practical sense. Anyone who seriously wants one can
make one, and there is little we can do to stop that.

However, there is a technical solution to the ATC problem.
We could replace the AM radios with cryptographically
secure spread spectrum radios. Then it would be virtually
impossible to effectively jam or spoof them. The technology
to do this has been available for over two decades, and has
become a consumer item in this decade. But people would
rather pass a feel good law than to implement a real solution.

This notion that "there ought to be a law" is similar to the absurd
cellular monitoring ban, a totally unenforceable smokescreen.
Cryptographic security is a completely viable alternative for those
who do want to guarantee their privacy, or validate their identity,
over the airwaves (except for the fact the feds don't like the idea
because it means that *they* can't eavesdrop on citizens either).

Reg, as you probably know, the murder *rate* does not have the same dimensions as the population so they cannot be compared as you are trying to do with the word "exceeded". If there were two people in NYC in 1492 and one murdered the other, the murder rate would be 50%.

The CW written was fill in, which makes it harder if you don't copy enough.
I didn't copy enough info to pass it. My MAIN problem was that they sent the
code at about 17-18wpm but the spaceing was a bit wider than I practiced.
Now if I was copying fine at 13 home and they send at 16-18, that's a problem
to me. If people are practiceing at 13 home and they go for this test and hear
it sent FASTER most will probably fail, unless they can copy 18-20wpm home
first. I agree about your comment on it shouldn't stop me from
upgrading but that's the way it is right now so.....I'll keep at it. I'm not
waiting for the restructureing, who knows when that will take place.

Archaic mode of communication? Human beings have been using voice
(spoken language) far longer than CW to communicate!

When looked at closely CW is a rather sophisticated communications
system. Like computer communicatons it is a binary character driven
system. But unlike computer communications it has variable length characters
not limited to a fixed 1 start bit 8 data bits 1 (or 1.5 or 2 stop bits) AND
is
understandable by (through training and skill development) a human being.

I like CW and am quite proficient in that skill but I do agree that it is
time to
move on and drop the requirement. However I do feel that more emphasis
should
be placed on the technical requirements to obtain a license.

Cheers, Graham VE3GHM

To agree, as ILP seems to do, that it is a good thing for the
government to have a monopoly on effective deadly force, one must be
assuming that the government is 1) overwhelmingly benevolent, and 2)
likely to remain so forever.

In my view, neither assumption is warranted by the facts.

Happy Interneting,

Kevin, WB4AIO.

The Famous Mt. Wilson repeater. It has been that way for 20 years , well
maybe only 15.
I first heard it on an Icom 22 A . Special xtals where needed to access
the machine at that time. The "free thinkers" took over and now it is
like it is.

Tom,

The Farnsworth method holds the character speed at 18 per minute, but varies the spacing to whatever the wpm rate is. The transition from 5 to 13 to 18 wpm is easier, as the sounds are the same. I can't tell by ear much difference between 18 and 20 cpm, so the transition then should be quite easy also. Since you can already copy 13 wpm, you only need to get used to the character sounds at the faster speed. You have the same amount of time to "decode" the tones to letters. If it helps, many of the learn-morse-code software support Farnsworth.

ARRL tests use ARRL tapes, which have the same character rate as word speed. You might find this easier, but they use fill-in tests, not multiple choice.

Michael.

No...Not necessarily!!!
BUT....

Hmmm...Maybe I was a Ham in a previous life and that is why I believe that there is such a thing as HAM TRADITION. BTW It isn't so easy to find out about our previous lives [if we had any}. Now that there is the Internet and NGs maybe it might get easier in the future. We shold try to remember our ham call and our internet addresses. I would suggest that everyone who posts here (and believes in reincarnation)use full and definate identification...In that way they can more easily look themselves up in the archives if and when they return in future lives....and want to continue to debate about Morse exams. I never met a ham I didn't like...probably in any of my lives, Hams need more classes, 73, Bob Wex w2ilp (Investigate Lives Passed?) -- .- -..- .. --

Eh??? You sound like a sniveler asking the world to slow down for them. Get on the train, or stay behind. It doesn't matter at all to me either way.

The requirements today for getting on HF include demonstrating minimum proficiency in CW. The test format is immaterial, so long as it demonstrates the necessary proficiency. Since fill-in-the-blank tests don't have hints in the answer section, I feel it's a better test than multiple choice. But what do I know about educational theory?

Also, you forgot one below: "You only paid $50 to skip the CW test? Mine held out for $60!"

Michael.

No, it's more your implying that CW is outmoded and is no longer
used on the ham bands. Have you ever listened to the CW bands
during a contest, or DXpedition? Why is virtually every amateur kit
on the market QRP CW rigs? Have you ever listened for CW activity
period on the amateur CW bands?? Unfortunately, you still miss the
fact that thousands of hams, old and young, new licencees and old
timers, find CW an enjoyable mode to operate.

If CW is eliminated from the tests, fine. I love uncluttered CW bands.

It sounds like you are trying to force YOUR values more than anyone
else, and for the wrong reasons.

When our repeater loses AC mains, a relay drops out and puts the repeater on
DC (gel cell) power. We use a second set of contacts on the same relay to
short out a resistor which changes the tone (frequency) of our courtesy beep.

Works like a charm.

73, Hans, K0HB

> If you make people think they're thinking, they'll love you;
> but if you really make them think, they'll hate you.
> ~~~

Nobody can make anyone think, although it can be suggested.
People don't always love the people who think the same as they think nor the people who try to make them think...
BUT it is a shame that some people hate the people who they don't think are thinking the same as they are thinking.

You can lead a horse to water but you can't make him drink;
You can lead a man to education...but you can't make him think.

I believe America should pull out of all Alliances and build our country back to the level it was. Bring back to our country the jobs lost to China (a fine example of humanity in itself) and all the other worthless money mongering foreigners who exploit their own.

What American politicans have not learned is we can not stop oppressors. But that is not politcally correct thinking, as since the credo of Politicians is it does not matter how badly things go, if you good doing it then it is a good deed.

Ah, here's the problem, Nick. What you aren't seeing, because Slobodan Milosevic doesn't want you to see it, is the brutal expulsion of hundred of thousands of ethnic Albanians from their homes. At least this time, because the NATO military is there, humanitarian aid reaches them a lot more quickly than usual.

NATO certainly isn't forcing Milosevic to do this. There's some evidence he had this in the works even before the NATO bombing started.

Also: are you not aware of how the Kosovar Albanians were completely disenfranchised where they lived? A people that was alredy poor had to build an underground school system, an underground medical system, and an underground economy. I read about this several years ago, and knew that it was only a matter of time before the situation would explode. Well, now is the time.

Hmm why just equip commercial aircraft and appropriate towers with the SS radios and leave everything else alone? Tower transmissions go out on analog and digital freqs at the same time, not unlike the analog/digital phone quandry.

If you feel so strongly against any difficulty in obtaining an Amateur
license,why not just buy a CB?Some people dont have your'gimme
something for nothing" attitude.In my opinion,Amateur Radio dosnt need
you.

Source record: 144734

If there was any question as to the effectiveness of Riley Hollingsworth's recent campaign to clean up the Amateur Radio Service, one has to look no further than the recent activity on this Internet newsgroup. Most of the "top troublemakers" of 20 and 75 meters have surfaced here, many within the last several days. I need not mention any names or callsigns; it's plainly obvious as to whom I'm making reference to.

Look around. The prime violators, many of whom have been specific targets of recent FCC investigation and/or enforcement efforts, are now carrying on their personal vendettas via the Internet. Coincidence? Hardly. Expect more of these familiar "problem children" of the airwaves to surface here in the coming weeks as Mr. Hollingsworth's noose tightens around their collective necks and puts a long-overdue end to their illegal activities on amateur radio.

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

And once all the smoke clears from the issue, the bottom line is just as you have stated.

I am a "no-code tech" at the moment, but will be upgrading soon. I am working hard to get it done BEFORE the change takes place (if it does). I hope that if the changes do take place, that a person be allowed to request to take his exams under the old requirements, and that there be some differentiation in call signs between those who earned their licenses and those who got them in a box of Cracker Jacks.

As indeed, you are doing here...stating YOUR opinion
and not facts as to the mode being whatever one might
care to consider it as.

>"Hurdles" are necessary to seperate Ham Radio from other unlicensed
>services such as CB.

NO!

Justifiable requirements are needed, not Hurdles simply
for the sake of hurdles.

>Note that the technical portion of the test
>is revalent to ham radio since hams are permitted
>to build, design, align and
>adjust their own transmitters--something that is not permitted in any other
>class of radio service.

Agree completely.

>Operating a ham radio transmitter implies some
>knowledge of the theory behind its operation.

Agree again!

>Most of the "NO CODE" whinning I object to comes from those who something
>for absolutely nothing; no code, no theory.

That is pure bull as NO ONE from the NO CODE
side has even suggested, much less asked for,
any no code/no theory license.

If you can provide proof to the contrary, please do.

>That class of license already exists on 27 MHz.

Actually that is incorrect as there is NO such thing as
a CB license at all.

Cheers,
Bill K2UNK

>In a free society all citizens have a right to life, liberty and the pursuit
>of happiness and freedom from the fear of unregulated weapons in the hands of

Just where is that in the Constitution I have read the entire
document and have seen of this. Indeed I seen things that argue
against this idea. One does does not have a right to free of all
fear, (esp irrational ones)

>hate mongers. You are correct in saying that no contrrol can be fully
>efficient BUT we still need some controls. No society is really completely

An unsported assertion. Indeed an unconstitution position,
Nobody can dienied the right to bear based on the point of view,
therfore guns can not be keep out of the hands of Hate mongers simply
because they are hate mongers. Indeed the threat to do so in violation
of the constitution drives many of these hate mongers and aids them in

getting others to join their cause

>"free" because in all societies some people are for some reasons freer than
>others...be it economical, political, or whatever reasons. Why is O.J.

>> that only the criminal element would posses them.
>
>Are High School students part of your "criminal element"?...BTW who are the
>"criminal element" ? IMHO there is only a "criminal element" in the minds of

Well we disagree again big surprise, of their is a criminal
element and a gun ban would make all gun owners members of it.

>bigoted haters who can perceive of some "criminal element" boggiemen who has
>some fictious ethinisity, race or religion. IMHO criminals are individuals

Indeed nothing the post makes these bigoted assumtions, you
seek to impose your your personal views on what the poster did and did
not say.

>who can not be identified by solely being of any race, religion, creed, etc.

Indeed they can be defined by a common creed, the idea that
they are premit to conduct criminal acts, as defined by society

>There are good and bad people in all groupings...The "mafia" is not all
>Italian,etc.

Indeed but only you are going on and on about race at this
point
>
>> Currently,
>> a criminal never can be sure who might be a gun owner and

>
>People who kill are neither necessarily stupid nor logical nor drugged. I
>would suggest that you take a course in abnormal behavior. If only a few
>didn't own guns and it saved only a few lives I would be for making guns a

Indeed that is obvious, and quite consistant with your
controling mentality.

>lot harder to own. There are bootlegger Hams but that does not mean that we
>should not make people who want to be licensed be licensed without any

And nobody (who should be taken seriously) has ever seriously
advanced that notion. but your reaction is more test and to deny the
basic idea that Ham radio is about radio, instead you see it as being
about testing. Frankly this suggests that you might be well advised to
take a break from being a VE and smell the air waves a bit more

>examinations. It must be difficult for minors and previously convicted

It is somewhat difficult but will never be impossible for
these people

>criminals to obtain guns and maybe even a little harder for anyone to obtain
>guns. Laws are weak...One law said that a person could only buy one gun per
>month...Heck in several years he or she could build an arsenal. Does any
>individual need that many guns?

Why does his need govern the matter? I suspect that you have
a fair sized collection of somethign or other that you don't NEED in
any real sense. Why might he feel the need? Well holding the idea that
our society was heading for a civil war is a decent justifacation as
far as I'm concerned.
>
>> It seems to always be the leftwingers who insist on

>
>Left wingers often are libertarians who want no controls...especially no
>controls from affluent capitalists...You are a victim of old
>propaganda...which is no longer popular because... Communism and Marxist

Left wing idealogies have never been limited to the example
that you listed. Now today we have the odd setting of the left and the
right often wanting total control in the name freedom protection and
justice.

>Socialism doesn't work and they are different an now unpopular ECONOMIC
>systems...even in modern China...This has very little to do with what we are
>discussing here. Right wing capitalists have a right to protection of their

Indeed they do have that right and your point is?

>own lives and propertties in our society (The right to own and protect

Indeed they do have that right and your point is?

>property is certainly a right wing right) and I for one believe that that is
>an important right that has as much priority as any left wing pinko's assumed
>rights...No class of people and no individuals should have to fear that

I see your point total control and trusting the government.
Well personal I trust no government, esp including my own. Mine my
happen to be one of the better ones but that still is no reason to
trust further than I must.

>weapons may be in the hands of anarchists or children or nuts who have no
>political persuasion other than Hate. The nuts who are blinded by ignorant

Indeed if that logic prevails then claerly we see policy made
based on the notion that anybody that disgarees with the proponent of
a law is based on hate of some sort and therefore has no rights etc.
That is the basic theme of the Nazis, with the word hate substituted
for threat. according to Nazis the Jews were a threat to society as
such they could denied their rights under law. You porpose to base
policy on the idea that those who hate lose their rigths as well, and
therefore sooner or later can be treated to a new Final Solution.

>hate are neither to be associated with left or right wings. They are a threat
>to all wings. There is no entirely perfect Utopia. We need laws and law
>enforcers... but no laws or law enforcers can be entirely efficient nor can
>they avoid taking away some of the assumed rights of the public. Police have

Really more unsuported assertion. Don't you have any facts or
is all of this just a tirade based on your personal giases.

>a right to search our vehicles without a formal warrent...Airline security
>agents have a right to look in our bags..They can search mine because I carry
>no drugs..no arms...and no stollen goods. They can finger print me and take

And of course anyone that feels their rights are being
violated is obviously a criminal etc.

>my DNA...I have nothing to fear because I am not a criminal...IMHO those

LOLgo read the story about the guy said nothing when they
hauled away the jews because he was not jew. till finaly he was hauled
away and nobody was left to say anything about him

>INDIVIDUALS who fear that their rights may be relinquished may be the

Indeed be a good Nazi, turn the constitution on it's head. the
State can not be allowed to turn the protections of the consitutions
against the citizens. take a minute and go TNG "Drumhead"

>criminals (but not any mythological "criminal element"). IMHO People who
>fear to identify may always be suspects.

It if be criminal to demand ones rights, then I take and wear the
label proudly. Freedom is never free, and must always be frought for
and fought over. Those that forfet there rights to state are no longer
free, and indeed often are not in a position to to fight.

>

I am considering buying a 10 meter mobile radio. I have found one that puts out 12 watts on ssb and another one for twice the cost that puts out 25 watts on ssb. I would like someone elses opinion on whether or not 12 watts would get me contacts or should I spend the extra money for 25 watts? Any comments would be appreciated.

Thanks,
Stan Garrett

I'm a tech Plus and went for my General exams today. Passed the written,
but not the code. I've been busting my butt on the code, did fine home but I
guess nervousness and the fact that they sent the 13wpm at about 17 made me
miss a lot of characters. Well, I'm halfway there now so more practicing for
me on the code. I think the code tests should be lowered in speed but since
it's not yet I'll just have to really practice a lot more.

Back to practice!

Hey, Reg! What the heck you doing here? you're supposed to be maintaining a vigil on r.r.a.antenna to see if a Fractured antenna ever materializes.

But--really, now, those Injuns who had this side o' the pond pretty well covered before Chris set sail did their full share of hacking on each other, too. In fact that seems to have been their main entertainment.

When 10 is open (which is frequently lately) 12 watts will get you out fine.
An HTX-100 will do 25 watts and used they run around $100 or so. Excellent
radio too.

It's interesting to hear the 75 ya em crowd. They seem to be able to discuss more than their rig and QSL routes. I figure if you are on AM to begin with, you must not think like the typical lock step carbon copy cookie cutter FT-1000MP, Alpha 99 and TH7 at 105 feet ham.

Hi Stan,

The difference between 12 and 25 watts amounts to 3
decibels or approximately one half of an S-unit when on SSB
or AM. Which is not very noticeable in a moving vehicle
where the S-meter is up and down like a yo-yo anyway.

In slightly more technical terms, a 25-watt transmitter
will lay down the same signal strength at a distance of 10
miles across town, as a 12-watt transmitter will lay down
at about 7 miles. This roughly doubles the service area
and, if a uniform geographical distribution of radio
amateurs is assumed, will double the chances of having a
local QSO.

If the chance of a local QSO after calling CQ is only 1 in
10 then doubling it will not amount to very much. It might
takes months of operating to notice such a difference.

DX-wise, 2000 mile and 1400 mile distances will have
roughly the same 3 dB or half S-unit difference in signal
strength. You would probably not detect any significant
difference in the number of successful QSO's between 1
month operating on 12 watts and the next month operating on
25 watts. The doubling of service area does not apply
because of skip distance. There will be no QSO's at
distances less than skip distance because the radio waves
on 10 meters will not come back down to earth till then.
A 1500-mile skip is not unusual. At greater distances
signal strengths often vary by several S-units over a
period of minutes.

In my opinion you should buy the 12-watt transmitter. With
the money you save either spend some of it on a much higher
antenna or put it in the savings-bank until you have enough
to buy a 100-watt job. THEN you will notice the difference
!

I see many falacies once we start trying to relate time, crime and human
behavior. Each case of mass murder..[multiple shootings] which occurs may be
unique. Obviously each may be a case of the abnormal behavior of people who
become driven by anti-social motivations. When we compare 1895 with 1995 we
see a vast difference in culture. The social role of women and minorities
has changed drastically in 100 years for example...and so has the role of
adolescents and the freedoms that they may expect. Teenagers want freedom
and many seem to want freedom without responsibility. There were always
criminals...but it is interesting to note that although many people were poor
in the great depression it did not usually result in crimes of hate against
peers. Most people realized that they were not suffering alone and had
compassion for others...BUT there were organized compeating criminals who
distributed liquor during the days of prohibition and as we see in the movies
there were bank and train robbers. The movies also showed that crime didn't
pay and the bad guys would always get caught and punished in the end. Now

such flicks would be considered too mundane and predictible...so they are passe. But as I said the violence of TV, movies and video games alone can not make people into crazy killers. The big trouble starts when we explore what motivates each and every individual. We suffer from a great dilemma here. All humans must be balanced to the effect that they can be both inner and outer directed. There is a price to pay when a human becomes only outer directed and it is just as bad when a person becomes soley inner directed. We want to be individuals who can think and even dream for ourselves but we must live in society and we must be cheerfully obedient to sane authority, even when we think we know better and even if the authority seems to be hypocritical. In short we must respect law and order even when or if we feel like rebelling. Each individual has the responsibility of making his or her own decisions...without blaming anyone else. This is hard to do for some young people especially; often because of poor communicatiion with parents and teachers (authority figures). It is interesting that the most educated parents often expect too much from their own children...and don't always appreciate the children's problems with self-image due to limitations of abilities. The parents want to give their children the right to make their own decisions...often too soon. They want to give ther kids "allowances" and buy them cars as soon as they are old enough to drive...but they give the kids too much... often before the kids are ready for responsibility. These parents want to be sure that their kids don't lack anything that the other local kids have. Sooo the kids seek more exciting and challenging roles from more fantastic role models.... like movie killers in trench coats with semi-automatic weapons...and these upper middle class nutty kids can proceed to live out the fantacies, which any sane person would never even really seriously fantasize about. Maybe poor kids wouldn't expect to ever get the money to buy the right types of trench coats to fullfill such fantacy...Maybe kids in 1895 and even adults in 1895 in the culture of that day would never fantacize seriously about commiting crimes just for the sake of doing them. Remember such crimes as occurred in the schools are not robberies...they are not motivated by a desire to get anything ...because material things are not what is being sought ...only revenge for some imagined attack on a deluded self-image.... and that deluded self-image is not just a product of movies and video games it is a product of the same kind of society that (and you'll pardon my return to Ham Radio Policy) that places a more glorified image on the Hams who are operators of ready bought appliances than the Hams who are constructive builders of crude looking radios and experiments. We can not argue about VALUES because there are no right and wrong VALUES in themselves other than truly ethical ones. BUT in my viewing of the past and present cultures; I see the old Hams as people who wanted to learn how radio worked and to build a radio station themselves for this would fullfill their own desired feeling of accomplishment...I see the hate mongering Hams as just the opposite...They are fullfulling what they feel is the "cool" thing that their own fantacies are made of...they can not get envolved with anything that can not be fantisized as a possible way to broadcast revenge. We had a culure of being CONSTRUCTIVE that has IMHO often evolved to a culture of being DESTRUCTIVE.

>
> Prior to 1968, anyone could buy a gun by mail order, including the
semiautomatics
> some people seem to fear so much, with no waiting periods, background checks,

etc. Yeah but maybe kids couldn't as easily afford to buy the mail order guns because they were saving up to buy tubes to build a radio or a miniture gas engineer for a model airplane they were building. Even $20 was a lot of money to them and if they had a part time job...remember that in the 1890s there was not yet any minimum wage. I remember when I was a kid in the 40s some kids "worked" for the local drug store delivering prescriptions to the sick. They worked for nothing hoping to get occasional nickle or dime tips. How long would it take them to save $20?...and how much time would it take them to decide where and how best to spend it. They wanted to spend it on something that might legally be valuable to them in their futures.

> They were cheap too, with a 1911A1 .45ACP going for about $25, and a 9mm P38

guns were
> easier to get years ago, many kids had them (legally), yet the sorts of
violence we see
> today was almost unheard of in that era.

Yeah...It reminds me of Allen Shepherd's "Christmas Story", where the kid wanted a BB gun and everyone warned him that he'd shoot his eyes out. I think that parents and even kids did have it all together years ago and are lacking something now. The thrill of being a Boy Scout or a Ham has been replaced by being thrilled by the kind of hateful fantacy that places no value on any human life...because being a Boy Scout or a licensed Ham is now just too tame. We are not at war with the Japanese or Germans and can not channel our hate to them. Of cause now there are Slobodan, Saddam, etc. but I'm not sure that kids can see them clearly as enemies with the same kind of hate that most kids I knew had for Tojo and Hitler during WW2. Kids who wanted to be heros (or killers) saved themselves for the time that they might be able to enlist in military service to fight the real enemy.

> What has changed is not easier availability of guns (availability was easier
then, at least
> *legal* availability was easier). What has changed is the willingness of
people, particularly

> young people, to commit violent acts. If we want to stop violence, we have to look at that
> problem, and solve that problem, which is at heart a people problem, not a

thing problem. What has changed is American culture and American society that even now is unable to properly place the blame for tradgedy. We can not continue to enable kids or people with mental disorders to collect arms and explosives. Unfortunately trying to stop them (and no method would be entirely effective) places certain limitations and restrictions upon everyone. We must permit our bags to be X-rayed if we want to fly and we must all register guns and if we sell them privately we must be certain that the buyers are capable of being responsible for the guns and we must report all sales to the enforcing authorities. Now I know that that will not be easy...It is easier just to blame horror movies and games than to do anything that might inconveinence people...Heck some people think that hams should be licensed without taking any tests at all! Taking tests might restrict their "freedom" or not be convient and it might even crush their fantacies about their own self-image if they failed a test.

> The largest mass murder in US history was committed by a young man using a gallon of
> gasoline to firebomb the only unlocked entrance to a crowded club (in NYC).

Availability Yep but gasoline and other possible devices of destruction [in the wrong hands] are necessary for their normal purposes...Guns stand out as primarily weapons and this labels them...not only because they can kill but because they are seen by killers as efficient tools of killing. You can kill somebody with a baseball bat too BUT the usually fantacy is to hit a home run with it. Psychological written tests were given to groups of subjects. One group was given guns and trained on shhoting them...another group was not. The gun group was allowed to hold their guns while taking a test which was designed to test for aggressive attitude, hate, etc. The group who had no guns scored less prone to harbor fellings of hate, bigotry, inappropriate delusions of granduer, etc. than the gun group. The same tests were tried with other gun and non-gun subjects. The results were consistant.

> of guns isn't the cause of violence, and guns haven't been the instruments of the worst
> violent acts committed in the US. If we want to solve the problem of violence, we have to
You are correct there... An airplane crash can and has killed more people!
> concentrate on the reasons people commit it, not on the methods that they use.
>
> This is a complex and difficult problem. People want simplistic quick fixes, but there
You are correct. There are no simple fixes because no gun ban could be 100% effective and also it is not easy to change the opinions of people who believe that gun ownership is a right and that guns should be part of our culture. BUT IMHO the fewer guns there are the fewer masd-men can get themto commit crimes of any kind.
> are no simple or quick fixes to this problem. One clue, however, is to look at

what
> was different 50 or 100 years ago. That way we can get some idea of what has
changed
> to cause our society to produce so many vicious little animals (the bulk of
violent criminal
> activity is commited by people under 24). Perhaps the biggest change was that
in an
> earlier time it was recognized that parenting was a full time job, and one
parent stayed
> home to do it.

I do agree with your observation here...BUT could we change the role that woman now have in society? Can we restrict mothers to being full time housewives when they want to fullfull their own conceived potentials and use their educations and abilities to have careers outside the home? Can we make men capable of supporting a middle class life style without help from their employed wives?..The answrer is NO...Them days are gone forever...but now you are admitting that the gun and the murder stats are overwhelmed by the cultural differences that existed 100 years ago and this is what I essentially said at the start of this post.

> That's not a politically correct observation, but I think it
> cuts to the heart
> of why so many children are now so wild. There are many other reasons, of
> course.

Now you are making much sense. It is not just the guns themselves I am willing to also admit...It is not the movies or video games alone either...It is the difference in social American culture...and IMHO although not as serious a threat to human life...It is this same difference in culture which may kill Ham Radio! The only way to save Ham Radio in my opinion is to build up respect for the hobby as being educational and constructive...True that may not seem exciting to kids and even adults in today's *horrific* culture BUT IMHO it is the only thing that will succeed in the long run. We must make ham radio something that will attract Constructive types not something that can seem fantastic to Distructive types.

> We've "mainstreamed" the mentally ill onto our streets, we've forced together
cultures
Huhhh...I know a lot of mentally ill who were "mainstreamed" for appropriate treatment...but not to the streets.
> with different values, we operate a rotating door justice system, we've made

sure crime Hold on now.. Cultures don't have different values because of ethnic, religious, or racial differences...We must all be part of that "Americans All" culture or we can not succeed as a nation. The only cultures to fear are the cultures of haters and bigots. True our legal system may not always do the right thing but it is based on ethical democracy at least in the books. We can not become paranoid and fear others because fear can lead to unjustified hatred. In order to survive all cultures must have ethics and at least real respect for humanity and the rights of others. IMHO all do in theory. What we started to talk about were the changes in general

sociological culture which have been brought about by different life styles due to mothers going to work, kids having to be on their own at earlier ages, etc.

> pays with our war on some drugs, etc.
>
> We've created a pervasive climate for violence to flourish, and we are reaping the results

> address the reasons it occurs, and correct the things we have done to foster it. What we do
> not want to do is to remove people's most effective tools for resisting violent attack.
I differ in that I do not believe that gun ownership by me or anyone else significantly would limit my risk in the improbable case that anyone would bother to attack me. With my big mouth..I might be more vulnerable to attack because many people do not always agree with me on lots opf subjects...but I still don't think I need any guns.
>That
> would unleash whatever limits the vicious animals among us have by assuring them that
> their victims will be helpless to resist.
Anyone who can call 911 or have 911 automatically called is not exactly helpless.
>Ask yourself how different things
>would have been
> in Littleton if every adult in that school had been armed (illegal thanks to

the gun free school Oh no...The kid with the auto-matic gun wasn't even afraid to kill himself...Some of the "heros" who would try to stop him with guns, might have not taken cover themself and gotten involved a shoot-out. The likelyhood of more people getting shot ...both those with guns and the kids who might get in the line of fire is ever present...the end result could be more deaths...remember there is a statistical probability that the more bullets fired the more people may be killed or seriously injured. It matters little who fires the guns involved. The bullets from the good guys can be as dangerous as the bullets from the bad guys. It is a sad fact of wars that many soldiers are killed accidently by "friendly" fire.

> zone law). Now look at what they're actually proposing, more security cameras, as if a camera
> is any defense against someone intent on mass murder. A camera might deter a shoplifter,
> but not someone intent on mass murder.

That is true camaras can only help in identifying criminals after the crime is done..No cameras can stop a suicidal killer nor can guns unless they hit him before he has a chance to kill anyone BUT remember it is the killer who has the advantage because he started firing first and has not only the element of surprtise in his favor but the fact that your mind-set is not the

same as his...by the time you realize that you must kill him he might just as well have killed you. If you know there is a gunman in the building better hide because his adrenaline is flowing and it might take yours a while to be competitive.

>Once again, the emphasis is on things rather than
> on dealing immediately and effectively with the people who are intent on doing evil.
You never can be 100% sure of who the evil people are. Parents, teachers and professional people can't predict when and if a person will go on a murder spree.
>
> On another front, are the parents of the vicious kids in Colorado, and Arkansas, and
> Kentucky responsible for what their kids did? YES THEY ARE!

Here I agree with you exactly BUT the communities feel sorry for these parents as I said in another post and they will not even think of punishing them for their negligence. In the Ramsey case where a little girl was killed while her parents were present in the same house..I hold those parents responsible for the safety of that child even if they themselves did not murder her. They should serve some jail time on that count alone as an example to others and we should not feel sorry for them unless they can prove that thir lives were also threatened by their child's alleged but unfound murderer. Parents are responsible for their childrens welfare as well as everyones safety and parents should not deny that responsibility. In cases where parents can not be responsible children may be placed in foster homes.

>But it is unlikely that
> they will be held accountable. If you have a vicious dog, you are liable if that dog attacks
> someone. You can even go to jail for failing to leash or muzzle the animal. But parents
> are allowed to escape the responsibility for their vicious little animals' actions. That's
> not right, and it needs to change, right now. When parents fail to properly supervise
> and control their children, they should be held liable for the actions of those children
> just as if they had pulled the trigger themselves. That might cause parents to take
> their responsibilities more seriously.

I totally agree and I believe that the laws to that effect are stronger in some other industriasl nations...Here again is American culture that tends to make children independent as soon as possible and forgets that before children are mature to be legally responsible parents are rersponsible to a great extent.

> Gary
> Gary Coffman KE4ZV | You make it |mail to ke4zv@bellsouth.net

This was a good post Gary...I agree with everything you said EXCEPT for your romance with the popular American gun culture.

Hams need more classes,
I never met a Ham I didn't like,
Bob Wex w2ilp
I make it |Please don't shoot it down.

> 534 Shannon Way | We break it |
> Lawrenceville, GA | Guaranteed |
The dead can't live to collect any warentees. Nor can dead gun owners be conforted by NRA propaganda.

Do you just want a schematic for interest sake, or are you trying to
repair it?

Those date from 1976 and there isn't anything special about the circuitry.
I found an ad for them in the February 1976 issue of 73, but it doesn't
give much detail. There was a review of a Hufco counter some time later
in 73, but mine are not organized well enough to be able to find the
article easily.

It's going to use a chain og 7490's to divide down the timebase, and a
7490 BCD counter/(maybe a latch, a 7475)/decoder per digit. There is
nothing magical about that, and there really is only a set way to connect
them up so you can easily get the details from all kinds of articles zbout
building frequency counters. The only unique circuitry would be the input
circuit and the rewet circuits.

The January 1976 issue of 73 has an article by Jim Huffman titled "A $50
Self-Powered Counter". It's an almost pocket size unit. It has three
digits and a switch to see the rest of the decimal places. It shows the
input circuitry, which is a 40673 MOSFET feeding a 7413 Schmitt trigger.
I'm not looiing it up, but that's what was used in the K2OAW frequency
counter which appeared in a multi-part article in 73 in 1972. I suppose
there might be slight component variations. It gives some more details,
but it's pretty much some stringing together of some module like circuit
boards that the company made.

The February 1976 issue of 73 has another article by Jim Huffman, "What do
You Want to Count?" It sort of goes into the explanation of those
"modules". There's a three digit counting board, and on it each digit has
a 7490 counter, a 7447 decoder and a 7-segment LED readout. It doesn't
bother with a latch. There's another IC at the bottom of the board which
I can't read, but a schematic for the board shows a 7400.

So if nobody comes up with the schematic, the question becomes: "What's inside?". Is it one whole board, or "modules"? What IC's are on the board? Unless the reference frequency comes from the AC line (it's been done!), there will be a crystal oscillator and a chain of 7490's to divide it down, and they will all be wired up the same way, since they are all dividing by ten.

The display units are going to be something like the above and layout itself will show a pattern. If it's a bad readout, you look up the decoder IC and see whether it's meant for common anode or common cathode, and then buy a new one. The pinout may be the same, but you can verify by the wiring on the circuit board, since the decoder is a known absolute.

The input circuitry may require some tracing, but if it's got a MOSFET and a 7413, chances are he used the K2OAW input circuitry, and you jast have to verify the match.

Another popular input circuitry came from a commercial frequency counter and when QST reviewed it, must have been 1972, they showed the circuitry. From there, it showed up in plenty of the frequency counter articles of the time. It was an FET and bipolar transistor buffer capacitor coupled to a 7404 with the first or the first two stages set for linear operation via a feedback resistor. I mention the circuit since it was popular and it might have possibly shown up in the Hufco counter.

If the reference chain is not working (you can check it by figuring out the dividing ratio and hooking an audio amplifier to a low frequency output (the 7490 data sheet will give you the proper pin) for a tone. Try a different crystal (anything in the same range will give you an indication, and if there's still no tone, then inject another oscillator into the input of the first 7490 (such as from one of those crystal oscillators in a metal can that fit a 14pin dip socket). You'll have to figure your other schemes if still nothing comes out; but since they are digital IC's they will either be working or not.

The reset circuitry may be the most difficult since there are all kinds of ways of doing it. On the other hand, if there are no latches the circuit will be even simpler than most that were published.

The counter may look complicated, because of the number of IC's, but most of the wiring is repetitive. Once you've figure out one digit, the rest will be the same.

Of course, if you've got a blank board this may not be too helpful, unless the IC numbers are silk screened on the board. If it's just a blank board, you'd do well to forget it. Not because it's too much trouble to build a frequency counter with such small scale integration IC's, but becuase it used straight 74xx series TTL that used a lot of current and didn't have very high frequency range and you could do it simpler today with better integrated logic, and more likely CMOS or Schottky.

Motorola Radius VHF GM900 Mobile. Model number M01KHK9AN3AN.
136-178MHz, 16 channels, with
5-tone signalling. Cosmetically it is a 10/10. Transmits,
receives, and appears to work just fine, but it is sold as is.
No mounting bracket, power cable or mic included (uses standard
Radius power cable and mic). Will have
programmed before shipping if required. Buyers must prepay with an
Internationally Negotiable money order in
US funds. Buyer pays actual shipping and insurance costs.

Littleton, Colorado was 15 lives lost. It got the nation thinking and talking and the President and Vice President got thinking and speaking about it too. It is easy to be against the killing of children...everyone is. BUT that was not even "retail killing" compared to what would happen in NYC if they had similar gun laws (or lack of gun laws) there. What makes New York so different? A different mix of peoples who can manage to live in peace live in New York. They are not as homogeneous as the people in most parts of the South West and many are suspecious of their neighbors and hateful. In any typical day in NYC some group is picketing for some contriversial cause...or at least controversial in the minds of some other groups. What might be small or age old disagreements could easily evolve into mass riots with people taking sides that are based on uncontrolled panic and revenge rather than logic.

>In Arizona,
> and other states with concealed weapon permits, a criminal never knows but

> in a bowling alley parking lot in Mesa, AZ while I was waiting to pick up my
> kids. All I had to do was show him my 9mm Detonics and he took flight. Those
> kinds of incidents happen all the time and go unreported.

If he didn't take flight...would you have killed him? What if he wrestled the gun from you and shot you instead of cutting you? What if it all started because he had the gun insteads of a knife because it was easy for him to buy and carry a gun?? I could go on and on with "What if" and neither of us would have proven anything. I was once in a position where a drunk had a loaded gun pointed against my head...I was saved by some others who managed to get the gun out of the drunk's hands without him firing it...A totally risky situation...and you can bet my pants were wet. You never forget how defensless you feel when someone has a loaded gun against your head. In that case even if I had had a gun I couldn't have reached for it without expecting to be shot in the process.

> > In a free society all citizens have a right to life, liberty and the pursuit
> > of happiness and freedom from the fear of unregulated weapons in the hands
of
> > hate mongers.

> I remember the first part but I don't remember that second part.
Well the second part comes from THE FREEDOM FROM FEAR that Americans are all entitled to if they obey the laws themselves...It is paraphrased because hate mongers might carry weapons to make people they hate afraid of them.
>If we outlaw
> guns, the hate mongers with their illegal weapons can rest easy and assured
> that we are completely helpless against their onslaught.

Nah...because if we are efficient the hate mongers will not be able to get guns and if we are not efficient the hate mongers who hate other hate mongers will still be armed. Remember that more organized criminals get killed by other organized criminals than by law enforcers or honest citizens.

>We cannot rely
> on the government to protect us from criminals. We must each shoulder
> some of that responsibility if for no other reasons than we may not be
> able to call for help and help may not arrive quickly enough.

Sometimes we are protected against criminals by other criminals but I agree that government cant always do a complete protection job. I agree that is why I think that guns must be insured by PRIVATE insurance companies...because when private money is involved there is bound to be more investigations of gun crimes and better records kept of registered weapons.

> > Some of us may neecd to let off steam without
> > the ability of reaching for a weapon that can be used to inflict multiple
> > casualties in short order.
>
> Some of us need to gain a little maturity, training, and sense of
responsibility.
AND some of us are so immature that they think that they are cowboys fighting indians or people in trench coats fighting educators and classmates.
> I assume you have no butcher knives in your house?
Yep I can't cut beefstakes with guns. I prefer the proper tools for the job when I can afford to own them. I don't use my hand drill to saw logs with either.

> > But a maniac schitsophrenic may not care about any threat to his life...he

> > I would suggest that you take a course in abnormal behavior.
>
> I suggest we put all those people who exhibit dangerous abnormal behavior
> behind fences where they belong and eliminate the ones who commit capital
> crimes from the gene pool.

Good idea...BUT that would be quite a task and there are no particular racial
genes for dangerous abnormal behavior...Hitler thought there were...He was
wrong. If we think that any group is dangerous then we would need some very
big prisons and we would drastically cut down the work force and the
tax-payer numbers...That might call for another "Final Solution" and we would
be back to Hitler's policies again. If we put all people who ever exhibit
"dangerous abnormal behavior" in jail we will have to legally define what
exactly constitutes such behavior. Hmmm..I'd hate to have to be the judge.
Even under our present systems sometimes killers are freed from prison while
innocent or truly reformed people may be forced to serve life sentenences.
How would you decide if an eleven year old kid was a danger to society or was
just acting silly to get attention? I sure dunno.

> > If only a few
> > didn't own guns and it saved only a few lives I would be for making guns a
> > lot harder to own.
>
> Statistics indicate that guns are used to prevent crime many, many more
> times than they are used to commit crime. You just don't hear about those
> times on TV or in the newspapers. Disarming the law-abiding public will
> cause more lives to be lost. Are you willing to accept responsibility for
> the deaths of individuals who would still be alive if they had only been
> armed and prepared?

Not so.. There are many ways of interpreting the stats that exist. You can
use the interpretation of the NRA if you want but there is no sure way of
knowing "what if" conditions that can not be tried against proper controls.
If you read the books on accepted experimental research you can understand
that any conclusions drawn from social behavior as a function of response to
laws are hypothetical at best. "What if" fish could talk and pigs could fly?

>
> One of the Northern European countries has the lowest rate of breaking
> and entering. In that country, every able-bodied male is required to own
> a military rifle. Think there's a correlation?

No.. not at all because the culture and conditions in the country you mention
are different than in all other countries. It is an apples and oranges
correlation. I don't know if you are talking about Switzerland...which has
managed to claim neutrality in WW1 and WW2 and be the bank for all sides..and
has all its men armed with weapons that they keep in their homes as all are
in the reserves even though Switzerland is never officially at war.
Nope...all countries are not like Switzerland and all countries won't want to

use BEATNIC Time either. If you are talking about a Scandinavian country you must realize that Denmark, Norway, Sweeden and Finland are each quite homogeneous as well as being the homes of people who are not usually hate mongers because they are generally not fanatic about religions, life styles, etc....You can certainly not compare them with New York, Florida, California...or Yugoslavia!

Please understand Cecil that I do respect your opinions and I certainly don't want to be threatening you in any way...with or without considering that you own guns...and I don't think your opinions are very unique, as I have heard the same exact opinions from others who are also ethical and law abiding people...perhaps that is why I am well prepared to refute them all.

> 73, Cecil, W6RCA http://www.bigfoot.com/~w6rca

At any rate I appreciate your comments and don't feel threatened by you so please don't feel that an unarmed mugwump like me is a threat to anyone. We are both hams... and I never met a Ham I didn't like, Hams need more classes, 73, Bob Wex w2ilp

1999 YHOTY AWARD - NOMINATIONS CLOSE MAY 30

The nominating period is open only until May 30 for the 1999 Newsline Young Ham of the Year Award. With corporate sponsorship from Yaesu USA

and CQ Magazine, the Young Ham of the Year Award seeks to honor the Amateur Radio related achievements of those hams age 18 or younger.

In addition to a trip to the 1999 Huntsville Hamfest courtesy of Yaesu, this
years winner will also get to spend a week in Spacecamp Huntsville thanks to
CQ.

The full details, rules and a nominating form are available right now on our
website at www.arnewsline.org. Or send a self addressed stamped envelope to
the 1999 Newsline Young Ham of the Year Award, 28197 Robin Avenue, Santa Clarita California 91350.

You can get a Technician class license without the code you know. Since
1991, you just get no HF with it. I went for my General upgrade tests
yesterday, passed the written, failed the code. Oh well, just have to practice
a little more on the code and soon I'll pass it.

IMHO "Reasonable Analysis" hit the nail on the head. Please read
my replies to your disputes with him below:

>> Well, they banned guns in New York -and other places-, and
>> since that didn't solve the problem,
>
>I admit it didn't totally solve the problem but it went a long way in the
>right direction because if there were no such bans there would be wholesale
>murder!

Let's see, when guns are banned only the criminals have guns. Therefore only
those most likely to commit murder are armed while the law abiding citizen
is left unable to defend him/herself. Duh! Protection from atocities and
oppression is why the second amendment was created. Read up a little on
the behavior of British Redcoats who were allowed (by British law) to
commandeer your private home for room/board at any time. Be glad you
didn't live then and have a wife/daughter.

>
>> now the effort is to
>> ban guns nationwide
>>
>> Then, when that doesn't work any better, because it
>> creates a black market and ready source of ca$h for

>
>Yep...I'm sure the black market, as it may be called, is already in place
as
>well as in operation...but that has nothing to do with laws that can make
for
>punishment in the even rare cases where they might be enforced. Believe it
>or not some other nations who ban guns are asking the USA to be stricter.

I am all for punishing criminals, whether they use a gun in a crime or not,
but
especially hard if they do. What other nations think we should do is
irrelevant
and I think the idea of any nation or the UN "asking" us to change our laws
on guns, or anything else, is laughable.

>> In a "free" society, there is only so much control that
>> can be exercised by any level of government - beyond that

>"free" because in all societies some people are for some reasons freer than
>others...be it economical, political, or whatever reasons. Why is O.J.
>Simpson free? Why are others in jail who may be innocent but had dumb
>lawyers? No system is perfect.

You were doing fine on the right to life, liberty and the PURSUIT of
happiness
but then you lost it. There is nothing about "freedom from fear" in the
constitution. Also, there is no guaranteee of happiness, just your right to
pursue it.
LIFE-a gun allows me to protect my life from those who would take it.
LIBERTY-the right to own a gun is part of what makes me a free man
and maintains that freedom
PURSUIT OF HAPPINESS-much easier when I am alive and safe (see above)
Also, OJ Simpon is free because because a jury of poorly informed
people let him off. Many other criminals are free on technicalities. While I
think we need laws like Miranda, I do not think they should allow
obviously guilty criminals to go free.
Also, we have plenty of gun laws and other criminal codes. If we built
more
jails and enforced those laws the 2% of the people that commit 98% of
violent crimes would be behind bars.

>
>> Another effect of a nationwide gun ban would be to assure
>> that only the criminal element would posses them.
>
>Are High School students part of your "criminal element"?

Yes, high school students who attack other with bombs and
guns are part of the criminal element. Any attack of that type
should be punishable with the death penalty. For that matter
I think almost any personal attack on another human being above
the level of a simple fight should be punishable by death.
Good examples in no particular order:
first and second degree rape
first and second degree murder
kidnapping
sexual assault of a child
robbery with a gun
robbery with a knife
robbery with threat of harm
carjacking
arson

torture
Also, the defendant should be limited to a single appeal. No person or
group
should be able to file on a defandants behalf, he/she should appeal on their
own with their own lawyer. Execution should be carried out the day after
the lost appeal.
Enact and enforce these laws and crime WOULD go down-and fast!

>> Currently,
>> a criminal never can be sure who might be a gun owner and

>need guns to be ever present. Some of us may neecd to let off steam
without
>the ability of reaching for a weapon that can be used to inflict multiple
>casualties in short order.

If you want to lay down and be a victim feel free-I do not. You are living
in an armed
society-any criminal that wants a gun has one and there is NO WAY to change
that. Not even Hitler had that much control. In all states where carrying a
gun is
legal a)crime has gone down and b)those who legally carry have not gone
around causing problems. These are the facts, sorry you don't like facts.
Anyone
who would do so would/should be prosecuted to the fullest like anyone else
who breaks the law. Also sorry you feel you would feel the need to reach for
a
gun if you had once and needed to let off steam. I agree, YOU should not
own a gun. Personally, I do not feel I have anything to fear from a legally
armed citizen.

>> Such is usually avoided unless the

>guns. Laws are weak...One law said that a person could only buy one gun per
>month...Heck in several years he or she could build an arsenal. Does any
>individual need that many guns?

I disagree. Anyone who takes anothers life in a criminal act (as opposed to
say,
a car accident) has made a very poor decision, and thus IS stupid. Again,
where
law abiding citizens are allowed to carry guns crime goes down and lives are
saved. Your ham example is irrelevant-ham radio is a privaledge, gun
ownership
is a right. It will never be difficult for criminals to obtain guns-WAKE UP.
We need
to prosecute those who use guns in criminal acts. It is not up to you to
determine
how many guns, cars, VCRs, or houses anyone "needs". Besides, I have several
guns for differrent purposes. I can only shoot one at a time so if I have 5
guns
what do you care??

>> It seems to always be the leftwingers who insist on

>> justice". Observe these terms closely, for definitions mean
>> everything. There is a constant Utopian search for a perfect
>> "system" which cannot exist within a human setting. Remember
>> the USSR and "communism"?
>
>Left wingers often are libertarians who want no controls...especially no
>controls from affluent capitalists...

What? Liberals believe in legislating personal freedom and economic
oppression.
They support liberal causes but tax disproportionally higher for those who
make
more money in order to give it to those who did not earn it. Conservatives
believe in legislating morality and economic freedom. Libertarians believe
in
personal freedom with responsibility and economic freedom. Libertarians have
far more in common with conservative and generally support the right to own
guns.

>Right wing capitalists have a right to protection of their
>own lives and propertties in our society (The right to own and protect
>property is certainly a right wing right)

No, in America this a right for all people. You simply choose not to
exercise it
(unless you live in a state that unconstitially denies that right).

> and I for one believe that that is
>an important right that has as much priority as any left wing pinko's
assumed
>rights...No class of people and no individuals should have to fear that
>weapons may be in the hands of anarchists or children or nuts who have no
>political persuasion other than Hate.

Children should not have access to guns. That is a responsibility of the
parents.
In America we cannot deny someones rights because they are an "anarchist"
or due to other "political persuasion". It is illegal in all states for
"nuts" to own
guns right now. If one of the anarchists or hate mongers decide to practice
their beliefs with guns they should be prosecuted and executed.

>The nuts who are blinded by ignorant
>hate are neither to be associated with left or right wings. They are a
threat
>to all wings. There is no entirely perfect Utopia. We need laws and law
>enforcers...

Whoopee, we agree on something.

>but no laws or law enforcers can be entirely efficient nor can
>they avoid taking away some of the assumed rights of the public. Police
have
>a right to search our vehicles without a formal warrent...Airline security
>agents have a right to look in our bags..They can search mine because I
carry
>no drugs..no arms...and no stollen goods. They can finger print me and

>my DNA...I have nothing to fear because I am not a criminal...IMHO those
>INDIVIDUALS who fear that their rights may be relinquished may be the
>criminals (but not any mythological "criminal element"). IMHO People who
>fear to identify may always be suspects.

The right is not to protect us from searches, it is from "unreasoomable
search
and seizure". The laws we have are what determine what is "reasonable".
A bad search may be thrown out if it is deemed unconstutional. As long as
these
things occur withing the scope of the constitution and the laws then our
rights
are not violated.

>> If you were a Hitler, Stalin, Saddam Hussein, Milosovich,
>> Mao etc what would YOU support in the way of gun control?
>
>For who? Your own armies? Your enemies? Internal rebels? This has nothing
>to do with gun control internal to a nation at peace. Obedience to
authority

>argument against gun control that I saddly admit to....Because if some
nation
>won a war against the USA and we surrendered...I dunno if it would exactly
be
>easy to occupy Texas. (:=))

While we need to be obedient to authority, which is there to protect the
rights
of all people, gun ownership is what keeps those people free. The Japanese
military "dropped it guns" when the government surrendered. While I am not
familiar with civilian disarmament of the Japanese after WW2 they are now
a free democracy and set their own laws. Unfortunately their laws are so
backwards that swords are banned. While a government may surrender, people
may not. Too bad the Albanians aren't better armed.

>
>> In fact what DID all of them dictate within their own
>> spheres of influence?

>Heck I wouldn't mind if Hitler collected all Jewish owned guns. It was the

This whole paragraph is sick.

>>Then consider that Washington,
>> Jefferson, Madison etc. all strongly supported private
>> ownership of weapons, and why they did.
>
>Yep and they "controlled" the Native American Indians and Black slaves who
>were not as well armed and they planted marajawana and used out houses...So
>what has that to do with today's society?

In the context of that time period blacks and indians were not considered
people,
nor protected by the constitution. Thankfully, that has since been rectified
in
America and now all people have the same rights. The suppression of some
races in that time does not negate the correctness of the rights of the
people.

>> It's easy to blame "guns" for debacles such as the school

>accepted fact from studying the case histories of real criminals.

Here we agree again. Personally, I think we should have new umbrella law:
If YOU did it, it's YOUR fault. Personal responsibility for ones actions
could use a big comeback.

>> I'm hearing from relatives in the military that important

>of all this may threaten the lives of your family and/or friends in the
>military services because where there is war or conflict, more often than
not
>there is death on all sides. Let us all hope that this Balkan conflict is
>ended soon.

Well, IMHO, I believe Clinton has cut back the military too much. There is
also the question of whether we should be in the Balkans. Another option
would be to send arms to the oppressed and just bomb out the heavy
equipment of the bad guys. I too, hope it ends soon.

Social security is threatened because it is a poorly legislated program
that puts out more than it takes in and is mismanaged. Ignoring the
fact that it began as a "temporary" measure, it would be far better if
each person contributed to their own account, and received only that
money it made back. Also, a choice of not too risky investments
for each person to pick from would be good. Even a straight S&P500
fund would be better than what they do now, which is tax from the current
workers to pay the current retirees.

>Like ignorant hate??? Like the fear of some paranoids which can lead to

Hams
>need more license classes, I never met a Ham I didn't like, Bob Wex w2ilp
>(Identify Loose Pistols) and check your guns at the door. -- .- -..- ..

Bob, I defend my right to keep guns and only wish that my state also allowed
me to exercise my right to concealed carry, like the 43 other states. The
great
thing about America is the right to our beliefs, and you are certainly
enitiled
to yours. Rest assured, all my guns are locked up sufficient to keep them
away from children and criminals. But to be able to defend oneself, one does
have to be available. A finger activate touch-combination lock safe works
great for this if you ever decide to own a gun. I wish you and your family
well,
and should some thug ever decide to violate your rights, I hope one of my
legally concealed carrying brethern is there to help you out.

Hi,
I'm planning to go to USA this summer for holydays, and wish to carry
my portable transceiver with me (TH78).

I own a 1st class licence, and plan to use only FM (2m and 70cm).

Do I need to fill any form ? Where can I get it and where should I
mail it ?

Thanx in advance for the reply...

'73 de I3APR, Andy

P.S.
Where can I get the ARRL US repeater directory in NYC ??

please remove _nospamgrazie to reply via e-mail

I have a virtually new FT-736R with both 6M and 1.2GHz modules installed.
Orignial owner, purchased about a year ago, one of the last. Absolute mint
condition and perfect operating condition -- used little. Also has FM CTCSS
module installed. To be sold only as complete unit as listed -- the ultimate
in VHF/UHF/satt radios. Serious buyers only please! Asking $2000 (original
discounted retail more than $3000) and has both the owner and service
manuals. - dont want to sell, there will never be another VHF/UHF box like
the 736R but cannot keep the investment waiting for Phase 3D.
Expanding shack in other areas. Free 16 element 1.2 GHz yagi (commercial)
with
purchase!! ($100 original cost).
Contact Bob / N6MTU / email: magill@ix.netcom.com --- will call and discuss
with serious buyers.

Howdy Dan....In all the hoopola about whether anyone should or can't use morse anymore.....a few points never seem to be brought out...or are only mentioned briefly.

Morse - Is a mode that allows communications to be copied verbatim easily (you can come close on voice or often do it if words are standardized but its not easy)......
- Is a mode that is indeed digital but which requires the most rudimentary interfacing and for which our own "processor" causes error correcting and speed compensating depending on the ability of the other "terminal" or "line" conditions.
- Is a mode which transcends language and dialect barriers when suitable signals are used...such as the international "Q" signals...and others. Hard to get most computer systems to do that yet and our ability to merely speak one language (english for example) with a wide variation of accents is hard enough sometimes.
- Is a mode whose "standardization" is unheard of in communications, where for at least a hundred years was not obsolete for the purpose of basic communications (stuff that's GOOD for critical use...such as lifesaving...and cheap commerce).
- Is a mode which, when the equipment is tired....just needs a good dinner and a cup o coffee to revive it.....stuff we have around anyway !
- When send using CW transmission (the 2 are NOT the same!) is extremely effective, using suitable narrow filters at both ends, for solid communications under the worst circuit noise and conditions. It might not be the very best...but when you consider the rudimentary equipment needed it becomes mighty attractive.
- Is a mode which, because it only requires very basic equipment, lends itself well to "field repairability".....a handy thing if you've ever sat in a remote spot and listened to digital signals that couldn't connect to you...telling yourself...."if they'd only just turn 'em on and off...I could get the message! After all...what is slower....a slow sent message or one that never arrives????

There's likely lots of other good and bad reasons why anyone should keep morse alive. Yep its old.....but well made and the fact that it hasn't undergone a million transformations tells us all that it works well. It is slow, but when mere text will suffice, is an adequate method of communication in conjuction with simple equipment. It does require skill to use...but everything we do also does (Tell me that a windows NT system hung up on a satellite link doesn't require skill to figure out what happened!). There is also a thing about operating morse that only

morse operators may truely feel...but its a kindred spirit that transcends whether you were a mere ham or a skilled commercial operator, a struggling boy scout trying it or a pilot who was able to make himself understood when his mic stopped working. To that last end I can only offer that to those who WON'T use it...it will always be a thing despised....to those who do or have, a thing revered.

2138. Re: Eliminate Geek Theory as Well as Morse Code; Focus on Operations

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-27 00:00:00 UTC
From: Spirit of '76 <NOjaa155SPAM@alumni.psu.edu>
Message-ID: <uhJzXmSk#GA.288@cpmsnbbsa03>
Source record: 144480

Sorry for the tardy reply, but I've been travelling.

1. RE IBM PC: Well, let's see: Tandy, Apple, Osborne, PDP, all sorts of homebrews. I used TRS-80s of various flavors.

2. I am sure a lot of hams tinker with gear, and some even build from scratch. But the fact is that very few do so as a percentage of total US ham population. Same thing with CW. Why make it a requirement when it is clearly unpopular? So long as it is not RESTRICTED, no one will be deprived of their pastime.

3. Ham Radio Mag, etc. Great old mag. I subscribed in the 70s/early 80s. Again, nothing wrong with tinkering, but it is hardly a reason to demand potential hams learn a bunch of, well, trivia, that has no bearing on the core of the hobby, PUBLIC SERVICE.

4. I tend to agree that 5wpm will become the sole Morse requirement. Thing is, Morse at 5 wpm is a real pain in the keister. Not likely to win converts on the merits!

5. I did read the May QST article and agree with it whole-heartedly.

The main point of my post was to get the notion out there that the point of ham radio is to COMMUNICATE, not exclude people based on their ability to master irrelevant trivia.

Regards,

Joe Ames W3JY

2139. FS: Tranquil Ham QTH in Central NJ

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-27 00:00:00 UTC
From: "Joe Giacobello, K2XX" <k2xx@concentric.net>
Message-ID: <3726AFE1.1C8B1EB@concentric.net>
Source record: 144481

K2XX and K2XXX are selling their QTH in central (Green Brook) NJ and moving to the wilds of western Virginia. The QTH is located in the first ridge of the Watchung Hills, overlooking the Raritan Valley, with a line-of-sight view into Manhattan (25 miles away as the crow flies), Long Island and thence Europe and Africa. The view to the west isn't bad either, but the Rockies get in the way. Green Brook borders Plainfield, Watchung, Warren, Middlesex, Dunellen and North Plainfield, NJ.

The QTH includes a 72 ft. motorized Triex crank-up, tilt-over tower with a six band quad on top: four elements on 10, 12, 15, 17 and 20 and seven elements on six meters, all on a 24 ft. boom. There is also a Wilson TT-45 forty-five foot crank-up (manual), tilt-over tower with a 13 element two meter Yagi, a 24 element 432 MHZ Yagi and a Diamond vertical collinear for two meters. Attached to the chimney are circularly polarized Yagis for Oscar (144/435 MHZ) with azimuthal and elevation rotors. Finally, there is a 102 ft. long center fed Zepp that I use for 30, 40 and 80 meters. This whole package comes along with trained neighbors. I know it's hard to believe, but they actually help me put up and maintain my antennas. I have consistently run 1.5 KW at this QTH for more than 19 years with practically no RFI. What little there has been over all those years, has been easily and amicably resolved. My relationship with my neighbors is excellent.

As if all of the foregoing were not enough, there is also a comfortable, cozy home, a wonderful neighborhood, convenience to shopping and transportation, excellent schools and immediately adjoining neighborhoods where the home values range between $500,000 and $1,000,000.

The house was originally built in the late 30's but has been renovated several times. We made a major renovation in 1987 and followed up with a new kitchen about five years ago. There are three bedrooms, one of which we use as a shack. The accompanying walk-in closet is used as a workshop. All of the bedrooms have walk-in closets. There is a modern kitchen, an office, a living room with stone fireplace, a sun/dining room, a screened front porch, a large front patio, and a large rear deck. There is an oversized, detached, two car garage with a large workbench and additional storage. While the official lot size seems small (75X100'), its effective size is much larger because the adjacent streets do not use up all of their allowed right-of-way. The lot and its surroundings are shielded by an abundance of mature deciduous trees. The property tax is about
$3400 annually.

Rail transportation to Manhattan is five minutes (three miles) away at Dunellen. The trip to Penn Station is about 55 minutes. Route 22 is only two minutes away and I-78 (Exits 36 or 40) is about eight minutes away. I-287 is only 10 minutes away.

High school students from Green Brook Township attend Watchung Hills Regional High School, a highly considered public institution noted for its academic and athletic excellence.

If you have any interest in owning this QTH, please contact Joe at 908-756-3825 or via e-mail. If there is no interest from hamdom by June 1, we intend to offer it, though somewhat sadly, to the general public at that time. The price is firm at $255,000.

73, Joe
K2XX

This program is somewhat antiquated [like CW ;)] for W95/98. First, it's a DOS program. Second, you have to download 35 pages of handbook in PDF format, so if you don't have Acrobat Reader, your out of luck. Plus, MA made my computer hang up.
Anyway, my 2 cents.

Much better programs are Tony Lacy's Numorse and NuTest, and AA9PW website. These programs work well with Windows, very intuitive, easy to use and you don't have to go go through a lot of DOS commands and troubleshooting before you can use these programs. Tony and Simon did excellent work in designing their programs; the writers for Morse Academy & GTEE Morse Tutor Gold could take lessons from them (and Gordo).

I hear what you are saying about the Radio Shack books but I really had no other option. I will tell you what i mean. A new HAM radio club just started up at my school. There was a guest speaker who was there to let everyone know that he offers a class to prepare you for the ham radio exams. Well I called him up and the classes were on Thursday evenings. The cost of the class was $30 and plus you had to buy the book to study. Well that was not unreasonable but this semester is coming to a close and that means lots of studying and more due dates to deal with. Well the preparation class was going to take something like 6 weeks to complete and since things at school are so hectic I figured why not go ahead and do the Radio Shack book thing. I had the same thought about the book though. It is more memorizing the questions and answers rather than learning. That was my whole reason for looking into that class that the gentleman offers. Once I figured that it would be best for me to study the book on my own I went ahead and studied for about a week and then I took the Technician exam. My whole point is that I would have rather taken the preparation class. I know the man who holds these classes has been around in the hobby for quite some time. I guess he would be considered an Elmer :) Well fellow hams I am happy that a lot of people have replied to me. I appreciate your time. I was a bit discouraged when i read Joe's post up there. But after I thought about it I said oh well.
Hey Guys thanks a lot again. 73's to you all......joseph

2146. Building your own transceiver

I was reading an old Ham book and it mentioned a great number of times that building your own radio was a common thing in the past. It also yielded a few benifits. The satisfaction of knowing that you built your own radio and plus the savings. I thought that since I was new to HAM radio what better way to really learn a lot. So I surfed the internet and I found a great site for a place that sells these types of kits. Has anyone here ever built there own radio fromthis type of kit? If so do you think this is a good idea? Is it really worth it?
The kit does not really cost a whole lot. I am very interested in one particular kit they sell for a 220MHZ Transceiver. The totall cost would be approx. $200. If youd like more details I can get those to you as well:

you can reply here or e-mail me at jmerfale@engr.csulb.edu

Any input will be appreciated.......73's

joseph

>>Hey Joe, Congrats, I just got my license last month. Went to CSULB when Stephen Horn was president.
What brand HT did you buy? Each manufacturer's insturctions are
different for programming their units. I bought the ICOM W32A, nice
unit, poor instructions compared to Kenwood or Yaesu.
>>Go to www.artscipub.com/repeaters for the open repeaters in SoCal. There is one on Catalina Island,
>>There is a group in Orange County called the WA6TWF SuperSystem that holds classes on how to use your radio. 714-680-4499 or wa6twf@juno.com. The class is free and held in Anaheim and WLA. I haven't called to find out how much it costs to join their group but seems worthwhile.
>>ARRL has a repeater directory, costs $8.
>>Downey has a radio club, www.DowneyARC.org; POB 207, Downey 90241. It's only a 20 min. drive from LB.
>>Go to Yahoo, search under hobbies for amateur radio clubs. There might be one close to you.

As for the morons that criticized you. Yeah, the ARRL and Gordo's books
inform you that the usual offset frequencies are .6 units apart for
repeaters in the US. The instructions for the HTs aren't always simple
to understand, especially if you have to flip through 3 pages.

2148. Re: Morse code

I believe the International telecommunications Union, the international treaty that authorizes the Amateur Radio SERVICE, requires Morse Code for amateur licenses.

We have been playing with the definitions of how much morse has to be known, copied, skill level, etc. but I believe international law still requires it.

Dave

I used to like CW back in the 80's when they were first starting out. They put out some good tunes like: "Like a Novice" and "Jammin", but once they got into that "VOR in the USA" phase they have gone down a musical suck trail and I've since tuned out.

Hello all!
Have the following items for sale:
1-Tektronix 7A19 - $20.00
1-Tektronix 7D01/DF1 (no probes) - $45.00
1-Tektronix - 4952 - joystick - $10.00
1-Tektronix - P6056/6059 - probe new in factory pack - $15.00
2-TIF model VA105 volume air balancer - both for $20.00
1-Genrad 1269A power supply 300vdc50ma/6.3vac3amps- $10.00
1-General Microwave model N-422-A Power head 1-12ghz
3-Systec model TM107A - temp meter - $10.00each
1-Data I/O model 29A with Unipak 2 - $40.00
1-Data I/O Chipsite- $15.00
1-Elgar model 251 with 400B oscillator - $75.00
1-Macbeth model TD504 Densitometer - Digital - works - $50.00
1-HP 608D Sig. gen. - 10-420mhz - works good tested on all ranges and physically in good condition- $95.00
1-HP 8403A modulator - $25.00
1-HP1630D with pod's 2-10272A, 2-10271A no grabbers but have connectors to make your own. Unit does not self test but in good physical condition and powers up fine. - $70.00
1-HP 1600A Logic state analyzer with (2)-10231C & grabbers, (1)-10230C with grabbers - tests OK - $50.00
1-HP1600A with (2)-10231C and (2)-10230C both with grabbers - $60.00 tests ok.
1-HP428B - NO probe - good condition/new style - $30.00
6-RF Industries UNIDAPT cable assembly kit with rack holder - NEW! - factory packed - $10.00each.
1-HP 1607A Logic State Analyzer - with (1)- 10231C and (1)-10230C both with grabbers- $45.00
1-HP10248C 8 bit probe with grabbers and case - $10.00
Thanks for reading this and best 73 de Dave K4DLJ

2158. Re: Shorted coax stubs-notch filters

Newsgroup: rec.radio.amateur.misc

Considering the comments on velocity factor, you willl want to measure the
resonant frequencyt of the notch with some type of equipment. The stubs
I've built had to be tuned to frequency.

If you need higher notch-Q (at the expense of slightly less notch depth) you
can use a longer stub (i.e.: 3/4 wavelength, 5/4 wavelength - don't forget the

Vf adjustment).

Another approach to improving the notch filter is to use multiple notch
filters
separated by a 1/4 wave transmission line.

```
<--1/4-->
In ------+--------+------- Out
| |
| |
stub stub
```

I've used this techniques to knock down a paging transitter signal located
very, very close (a few feet away). Tuning of the stubs was necessary. Start

with them long, and snip off 1/2" pieces to bring them into resonance. For
longer stubs, RG-213 gives better notch depth than RG-58 (due to lower loss).

Tom, N5EG

>
>Don

Well, Don, sorry to see you go. And you will go.

But it's attitudes like yours that are going to be the death of CW.

CW will go as a requirement, it's only a matter of time. But spoiled
brat attitudes like yours and others will eventually lead to stagnation
of CW, and then the protected sub-bands are going to go.

And you point out that most of the advances in electronics over
the years were from HAMs. That's true. But it sure had NOTHING
to do with CW for years.

Face it, CW is neat, it's fun, but it's not the savior and protector of
HAM radio. That funtion is up to the members, and hopefully
members that are open to new ideas and moving (hopefully
PUSHING) the envelope forward. Not those stuck in the past.

I'm going to regret wading into this mess but...

Did a quick count last night. I have in my possession over 200 PSE QSL cards from German stations worked during contests since 1995. That's over 200 people who got a wanted QSL only because of a contest. And that's only in one country - if you count Japan, the rest of Europe, and North America, I'm sure the figure comes pretty close to 1,000.

Although I and my wife have used the book "Now You're Talking", a friend is presently working towards his first license and finds the study book by Gordon West much better. I find the Now You're Talking book harder to follow than some others and does not give you the explination of the correct answer right there with the question. You can buy the Gordon West books at Amateur Electronic Supply (see their web site - www.aesham.com) or call them at 1-800-558-0411. They are commonly referred to as AES.

Someone else has already recommended "HAM UNIVERSITY" and they
are correct. It is an excellect program. Here are a few other
possible places to look for help.

The ARRL web site, http://www.arrl.org, has downloadable copies
of the question pools for the Novice/Technician tests. There
is a lot of other good information there, for the beginner.
There is also a section where you can find out where the
tests are given and the dates/times.

Gordon West books are usually available at any local Radio Shack.
These are good books, dispite a few minor errors. The books
contain all of the questions, from the question pool, plus
an explanation. Very easy reading.

Another source for the books is Amateur Electronic Supply. They have
them listed on their web site, "http://www.aesham.com/", for $12.95.

There is, of course, the ARRL books, but I can't comment on them
because I have not seen them.

When you think you are ready for one of the written tests, try
this site:

AA9PW's Amateur Radio Exam Practice Page at
http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

You can get a real good idea of whether you are really ready
for one of the tests. It really helped me through the Tech,
General, and Advanced tests. I'll see how it does for the Extra
test in May or June.

Another site would be the following, but I like the first one
the best.

Ham Exam: Amateur Radio Practice Exams
http://w5ac.tamu.edu/ham-exam-v2/ham-exam.html

You need to remember that the No-Code Tech license limits you
to the VHF and UHF band segments. If that what you are interested
in, great. But if you are looking to work the HF bands you will
need to learn the code. If that's of interest to you, you might
try getting a copy of Morse Academy. You can get a copy from:

Ham/Morse Academy - AH0A
http://www.speroni.com/AH0A.html

I used it myself, to get through the 13 WPM code test. I found that
Morse Academy comes as close as you can get to the FCC exam. When
the code test started, it sounded like I was sitting at home,
working at my PC.

There is an option, "G", that generates simulated QSOs, with
all of the prosigns, and contains the kind of information that
will be on the FCC test. These QSOs can then be played back
using the "K" option, at any speed you like.

Morse Academy is written for DOS and sometimes has trouble
with certain hardware configurations, but then they all do.
To avoid any problems, I made a bootable floppy and installed
it there. It works great that way and is portable to any
computer that's handy. I've tried it on 486's and 586's. It
should work on the old 286's and 386's.

Here is another site that might be of interest:

Morse Code Practice Java Applet
http://www.teklasoft.com/java/applets/morse/morse.htm

I haven't tried it yet, but it might be nice.

Well, good luck.

Martin

Listed on Ebay -->
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=95964502

Collection of ARRL Handbooks, 25 issues in all. Some duplicates as noted.

Due to the number, and my desire not to pack and ship separately, I have
listed as a group using the following criteria:
Scale: ->
Excellent- Near New ->
Very Good- Slight binding cracks, slight folds, binding in good shape, no
tears or damage ->
Good- Normal wear for age ->
Fair- Showing some wear

1942 Very Good
1945 Fair but cover is loose
1946 Good but small tear on binding cover
1946 Good
1947 Fair
1947 Good
1947 Fair
1950 Good
1952 Very Good
1953 Very Good
1954 Very Good
1955 Very Good
1956 Very Good
1961 Good
1963 Excellent
1964 Excellent
1965 Excellent
1965 Good
1966 Good
1966 Very Good
1967 Excellent
1967 Excellent
1967 Excellent
1968 Good
1969 Good

Payment must be in Postal Money Order or certified funds received prior to
shipment. Buyer pays shipping, your choice, FedEx or UPS.

Tnx!

Because it just ain't that critical. Most folks have a very mistaken
idea of just what an air traffic controller does. If a radio system
appears to be trashed, the pilots will revert to a Lost Communications
mode of operation and take care of themselves. In fact, this is one of
the more substantial issues you learn in an Instrument Rating Ground
School.

Air traffic controllers make flying easier, faster, and safer for
everyone involved. I liken their operations to that of a police
officer directing traffic. You can manage without them, but it's much
safer when they're around.

Don't forget one of the best advantages of a stone simple VHF radio:
It's reliable. The fancier things get in the cockpit, the more there
is to break. How bad is this threat versus the possible loss of sync
in a spread spectrum radio?

Message-ID: <3725C67D.175A7B90@yahoo.com>
Source record: 144545

Hi

I know this has nothing to do with HAM radio, and therefore is completely off topic, but maybe there is someon who knows and can explain it to me.

Yesterday I saw the movie "PleasantVille", and one thing that really puzzels me is "who do they film in BOTH B/W and color at the same time ?". Of course when you see some kind of special effect or explosion, you know it's most likely computer generated, but do they have to edit the entire movie on the computer to mix the black/white and color, or what ?. Maybe I should write to the "How They Do That" show instead.

Again, I know it off topic.

Thanks.
Jesper W6KTO

I am located in Long Beach Ca. Thank you for understanding where I am coming from.
I am a student at California State Univ. Long Beach and I am majoring in Electrical Engineering. I am always studying it seems and when I studied for the exam I did it all on my own. I do not know one person who is into ham radio. No friends or family at all. I was simply interested in it so I bought a book and studied on my own. I passed the exam the first time and I am curently learning morse code with a program on my computer. I want to upgrade to at least Tech Plus. I thought that this hobby was a learn as you go type of thing. It actually adds to my fun having to learn all of these things. Like I said I do not know anyone personnaly that I can ask these questions. I thought what better place to ask questions that this Newsgroup. Then people like Joe pop up and belittle newbies like myself. Joe, I do not have the luxury of being surrounded by experienced HAM operators. Please believe me when i say I am brand new to this hobby. I literally woke up one day and said "I would like to get into amateur radio". So I went to radio Shack and I bought the book and began studying. I would like to thank all of the fellow hams that have sent me e-mail with answers to my questions. I appreciate all of you. Even you Joe. To everyone i wish 73's...God bless you all. joseph merfalen...KF6VVQ

2174. Phonetic alphabets (Alpha Bravo Charlie Delta) (Apr 99)

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-27 00:00:00 UTC
From: bck1@shep.cl.cam.ac.uk
Message-ID: <7g52u6$e3a$1@pegasus.csx.cam.ac.uk>
Source record: 144547
Cross-posted to: sci.lang,rec.radio.amateur.misc

Phonetic Alphabets (Alpha Bravo etc)
April 1999

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic/radio/
spelling/telephone alphabets, and the term analogy alphabet
is also used. This collection currently includes alphabets
for the following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Romansh, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Greek, Romanian, Turkish,
Hebrew, Russian, Ukrainian, Swahili, Kwanyama, Ndonga,
Afrikaans, Chinese and Esperanto.

This posting supersedes the one of 17 August 1998. New
material includes Andriy Bogdan (Ukrainian).

My thanks to the many contributors, not all of whom are
acknowledged below. Particular thanks to Gwillim Law
gwil@mindspring.com for numerous contributions and for
looking after posting for a while.

Please report any errors. I will be glad to receive new
material; further references; anecdotes; whatever.

A Web copy of this article, together with some further
material, can be found at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

There is also a copy of the article at:

<http://www.columbia.edu/~fuat/cuarc/phonetic.html>

Also, but not currently up to date:

<ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/phonetic-alph/full>
<ftp://ftp.cs.ruu.nl/pub/NEWS.ANSWERS/radio/phonetic-alph/full>

Editorial comments are in square brackets.

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[This alphabet dates from about 1955 and is approved by the
International Civil Aviation Organization, the FAA and the
International Telecommunication Union; note that different
bodies prefer different spellings, so one also sees:
Alfa Juliett Juliette Oskar Viktor]

[The alphabet above is from the Cambridge Encyclopedia of
Language. An alphabet with Alfa X-ray can be found in The
U.S. Department of Defense Dictionary of Military Terms.
Alfa Juliett X-ray, which is the ICAO version, appears in
A Concise Dictionary Of Slang And Unconventional English
and also two Langenscheidt dictionaries]

[UK police use Indigo(???) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book: Beta Ultra Volvo Whisky X-ray.
A precursor of the present alphabet (1952?) had: Alfa Coca
Metro Nectar Siera Union Whisky Extra]

Phonetics for digits (from an amateur radio FAQ):

zero one two tree fower fife six seven eight niner

From the Cambridge Encyclopedia of Language:

zero wun too tree fower fife six seven ait niner

'Telecom B':

[Note similarity to Apples Butter Charlie]

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone
directories. An 'analogy alphabet' in a Kenyan directory
has Charlie and no Y. A Swiss directory: Andrew Charlie
Lussy Queenie Sugar. French/German vocabulary books: Andrew
Charlie Lucy Mike Nelly Sugar Xmas. English phrase books
for Spanish/Italian speakers: Charlie. A 'British English'
alphabet in a Langenscheidt dictionary: Andrew Charlie Lucy
Queenie Sugar Xmas. Norwegian dictionary: Andrew Charlie
Lucy Sugar Victory Xerxes. Collins Polish dictionary:
Andrew Charlie Lucy Sugar Xmas]

[Used as an English alphabet by telephone operators in
Israel]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French
has: Italy Kilogram Zu"rich; the corresponding book for
German has: Italy Kilogram Xanthippe Zu"rich.
An 'international' alphabet in a Langenscheidt dictionary:
Danemark Madagaskar Que'bec Upsala Xanthippe Zu"rich.
An 'international' alphabet in a Larousse business book:
Danemark Je'rusalem Que'bec Xanthippe]

[West Berlin telephone directory 1965: Danemark Je'rusalem
Madagaskar Que'bec Upsala Xanthippe Zu"rich.
Santa Fe (Argentina) 1955: Dinamarca Habana Jerusale'n
Kilogramo Nueva_York N~andubay Upsala Wa'shington Xantipo
Yokoama.
Azores 1966: Danemark Ita'lia Jerusale'm New-York Que'bec
Upsala Yokoham]

[Used as a French alphabet by telephone operators in Israel]

Bombay telephone directory 1962 (also a later source):

Army Brother Cinema Doctor English Father Gold Hotel India
Jam King Lady Mother Navy Orange Paper Queen Raja Sister
Table Uncle Victory Water X-ray Yellow Zero

Kenyan and Tanzanian telephone directories 1966:

Africa Bombay Charlie Durban England Freddie George Harry
India Japan Kenya London Mombasa Nairobi Orange Peter Queen
Robert Sugar Tanga Uganda Victory William X-Ray Yellow
Zanzibar

Johannesburg telephone directory 1965:

[Note similarity to Alfred Benjamin]

Arthur Betty Charlie David Edward Frederick George Harry
Isaac Jane Kate Lucy Mary Nellie Olive Peter Queen Robert
Simon Thomas Union Violet William X-Ray York Zero

Malayan telephone directory 1964:

Australia Bombay China Denmark England Fiji Ghana Hongkong
India Japan Kedah London Malacca Norway Osaka Penang
Queensland Russia Singapore Turkey Uganda Victoria Wales
X'Ray Yokohama Zanzibar

Used by police in New York City:

[Note similarity to ARRL and Western Union]

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Alternative phonetics sometimes used unofficially in amateur
radio:

America Boston Canada Denmark England France Germany
Honolulu Japan Kilowatt London Mexico Norway Ontario/Ocean
Pacific Radio Santiago/Spain Tokyo United Victoria
Washington Yokohama Zanzibar

[Also: Amsterdam, Baltimore, Brazil, Chile, Egypt, Finland,
Geneva, Greece, Guatemala, Hawaii, Italy, Kentucky, King,
Luxembourg, Montreal, Nicaragua, Portugal, Romania, Russia,
Sweden, Texas, Uruguay, Venezuela]

The ARRL (American Radio Relay League) alphabet (1948):

[Note similarity to Western Union and Able Baker]

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO/ITU alphabet]

Pre-1954 U.S. Navy Radio Alphabet:

(Communications Handbook, 1945)

[Note similarity to Able Buy Cast]

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

[formerly used by IBM engineers for hex digits and pin
positions]

Same alphabet:

- British forces 1952
- "Used by Armed services of USA & GB" (ARRL Handbook, 1945)
- "The Complete Morse Instructor..." (1944)

'Allied Services 1945': Edward Tape

RAF 1943-56: Able-Afirm Item/Interrogatory Jig/Johnny
Nab/Negat Peter/Prep

U.S. Army/Navy 1941: Sail

[In similar alphabets: affirm, cast, hypo, inter, negat,
option, over, prep]

RAF 1942-43:

Apple Beer Charlie Dog Edward Freddy George Harry In
Jug/Johnny King Love Mother Nuts Orange Peter Queen
Roger/Robert Suga Tommy Uncle Vic William X-ray Yoke/Yorker
Zebra

[cf. aircraft in Dambusters raid: A-Apple B-Baker C-Charlie
E-Easy F-Freddie G-George H-Harry J-Johnny K-King L-Leather
(officially L-London) M-Mother N-Nuts O-Orange P-Popsie
S-Sugar T-Tommy W-Willie Y-York Z-Zebra]

U.S. Navy 1940:

Affirmative Baker Cast Dog Easy Fox George Hypo
Interrogatory Jig King Love Mike Negative Option Preparatory
Queen Roger Sail Tare Unit Victor William Xray Yoke Zed

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

RAF 1924-42:

Ac Beer Charlie Don Edward Freddie George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc

Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

[Wrens at Bletchley Park: Apple James Kenneth(?) Oliver
Peter Quagger(??) Unicorn William Xray]

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

British forces 1904:

Ack Beer C D E F G H I J K L Emma N O Pip Q R Esses Toc U
Vic W X Y Z

[The OED has a reference for Beer and Emma dated 1891]

Welcome to the hobby Joe! Keep at it and don't mind the very few morons that you may run into. I went for my General tests Sunday, passed the written but failed the code. Back to practicing!

73!
Tom

In article <37260044.63A7DFA3@engr.csulb.edu>, Joseph Merfalen <jmerfale@engr.csulb.edu> wrote:
>I am located in Long Beach Ca. Thank you for understanding where I am coming from.
>I am a student at California State Univ. Long Beach and I am majoring in Electrical Engineering. I am always studying it seems and when I studied for the exam I did it all on my own. I do not know one person who is into ham radio. No friends or family at all. I was simply interested in it so I bought a book and studied on my own. I passed the exam the first time and I am curently learning morse code with a program on my computer. I want to upgrade to at least Tech Plus. I thought that this hobby was a learn as you go type of thing. It actually adds to my fun having to learn all of these things. Like I said I do not know anyone personnaly that I can ask these questions. I thought what better place to ask questions that this Newsgroup. Then people like Joe pop up and belittle newbies like myself. Joe, I do not have the luxury of being surrounded by experienced HAM operators. Please believe me when i say I am brand new to this hobby. I literally woke up one day and said "I would like to get into amateur radio". So I went to radio Shack and I bought the book and began studying. I would like to thank all of the fellow hams that have sent me e-mail with answers to my questions. I appreciate all of you. Even you Joe. To everyone i wish 73's...God bless you all. joseph merfalen...KF6VVQ

2178. Re: Completely off topic

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-27 00:00:00 UTC
From: jtyburczy@aol.com
Message-ID: <19990427161650.19006.00000130@ng-fc1.aol.com>
Source record: 144551

<<"who do they film in BOTH B/W and color at the same time?". >>

I think you mean "HOW do they film...". They shoot only ONE type of film, usually color. Any scene in a movie can be color corrected in the lab. Some or all color can be removed to make a scene look like t was shot in B&W. In addition, selective color effects (like in "Pleasantville") can be achieved by computer processing.

<<do they have to edit the entire movie on the computer to mix the black/white and color>>

Many movies are edited using a computer these days. The film ends up as a number of large digital computer files that are later conformed to the original film. I think what you are asking, though, is if "Pleasantville" was mostly computer processed. And the answer is yes. That particular movie had the highest number of "effects shots" of any movie made to date.

Hope this helps, 73, Joe W1GFH

Just about all of them have a Farnsworth option these days.
Personally I like Morse Academy. You can get a copy from:

Ham/Morse Academy - AH0A
http://www.speroni.com/AH0A.html

I used it myself, to get through the 13 WPM code test. I found that
Morse Academy comes as close as you can get to the FCC exam. When
the code test started, it sounded like I was sitting at home,
working at my PC. I'm still using it to help me get through the
20 WPM test.

There is also HAM UNIVERSITY, SuperMorse, MorseCat, NuMorse, etc.

Many can be had by doing a search on "morse code" at
"http://www.zdnet.com/swlib/". Some are free, some are shareware,
and others cost money.

Martin

Hello All,

This is Mike, KQ6MU.
I have a Yaesu FT-50R Web Page.
It has technical specs., features list, and
accessory list.
Check it out:

http://kq6mu.8m.com/ft-50r.html

Thanks & 73,

Mike Green KQ6MU

Please visit our Web site
http://www.angelfire.com/pa/videoandrobots/index.html
for an excellent source of low cost video components :

1) SONY Color CCD Video Cameras $30 Ea.
2) 4" SHARP Color LCD Video Displays $40 Ea.
3) Package Deal of 1 Camera, 1 LCD and a power supply $65.

Free data sheets and application notes are available for download in adobe acrobat format. We also have other surplus Electronics items as well, such as power supplies, fans and speakers, char LCD's. We have pictures of our 6 leggedwalking robot, for which we will be posting free plans and source code.

>appears to be trashed, the pilots will revert to a Lost Communications
>mode of operation and take care of themselves. In fact, this is one of
>the more substantial issues you learn in an Instrument Rating Ground
>School.

Well it's an interesting point, I'd certainly keep heading for the landing strip if the last thing I heard was the outer marker and my radio failed, however were deviating just a bit, the original post wasn't if you lost radio communications but rather that someone had given instructions to "Divert Divert Divert" of course I'd question a command like that to begin with but someone who had an understanding of the real lingo could potentially cause harm.

>Air traffic controllers make flying easier, faster, and safer for
>everyone involved. I liken their operations to that of a police
>officer directing traffic. You can manage without them, but it's much
>safer when they're around.

I think they are a bit more than a police officer directing traffic, it would be next to suicide to fly into O'hare under IFR condx without a controller, your chances of seeing rivots outside the window would go way up me thinks. Although my favorite strips are usually green with either corn or cows near the run up area :)

>Don't forget one of the best advantages of a stone simple VHF radio:
>It's reliable. The fancier things get in the cockpit, the more there
>is to break. How bad is this threat versus the possible loss of sync
>in a spread spectrum radio? !"

I agree that the odds are in your favor with simple radios, however the number of easily modified all mode radios is on the rise, thus the potential for some idiot to get his hands on one goes up.

Good flying,

Morse Code has its uses and should be encouraged, but not worry too much about those who don't know the code. I think the opportunity to pump signals out on a narrow band to distant parts of the world has its own charms.

The US Marines still use Morse code, and a few of us keep our keys handy just in case.

>Mike AA7QA. I passed all of the test now what

Mike, don't be afraid to run with gear from a swap, Invest $20 in a dummy load and piece of coax. Tell the guy you'll take it if it works then go plug it in and test it! I just bought an Alinco DX70T and a 25 amp supply out the door from AES for $787, but I can honestly say I had just as much fun running an old Heath HW-101 that I paid $75 at Dayton a few years ago and put another $30 into it for tubes. Also QRP kits are selling for $50, you need not spend a kilo buck to have fun. It is about fun isn't it? :)

****
Code is required by international treaty. That may change in the future but it exists now. The need for higher speed code for higher class lisence is another matter.

Whether or not the Marines use it is not relevant as that is the military and we are a hobby/separate radio service. You may have been thinking of the Merchant Marines which is different from the military. The Merchant Marines recently abandoned code - but again this has nothing to do with ham radio as it is in a different radio service.

As far as your statement that codes are forbidden to be used it is a very inaccurate statement as the standard Morse/American/International codes are recognized and permitted and treatied to be used. US FCC rules forbid the use of secret codes.

Japan's no-code HF Fourth Class license only permits the holder 10 watts
on phone, with no 30, 20, or 17 meter privileges. (Our CB operators get
to legally use 12 watts on SSB!)

Jeff KH6O

P.S. Please list for me the "others" that you mention, and the privileges
granted to operators holding such licenses.

Hi Michael,
I use Supermorse in Farnsworth mode. I'll have to jack up the send speed a few wpm and keep at it. It's just frustrating that I do well here at home but the test screwed me up doing it their way. I'm sure you understand my original point so I won't repeat it. Back to the salt mines for now.

73,
Tom

Will definately try that, already thought of it actually. Thanks for the
good luck.

2203. Re: Death of Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-27 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7g31m5$2g0@news.Hawaii.Edu>
Source record: 144657
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.scanner,rec.radio.shortwave

Follow-ups set to just .policy:

In article <37239998.25099186@news>, Shiva Nataraja <Newsgroup> wrote:
>If knowing Morse code is actually USEFUL for something these days,
>then by all means keep the requirement. But if nobody uses it, why
>bother? Somehow, I don't see extracting a pound of flesh from new
>recruits as a worthwhile reason.

Oh boy. Here's someone else who doesn't have an antenna connected to
his receiver. If he did, he'd find that roughly 50% of the QSOs on
the HF hams bands are conducted using CW.

>Why are such "hurdles" necessary?

You need to step back so as to get a global view of why the code require-
ment exists for HF privileges. RF at HF respects no boundaries, and as
communicators first and foremost, hams the world over should have at
least one mode in common. At present, there is only one mode all the
world's HF-licensed amateurs hold in common: CW. Whether one chooses to
use it or not does not matter; if the need arises he has it available to
him (maybe at a slower speed than when he was first licensed!). The phone
modes won't work as an international mode due to differences in languages,
but there are sufficient code pro-signs so that a meaningful QSO can
extend across language barriers. A digital mode could become the
international standard, but until such time that every ham worldwide is so
equipped and/or has the ability to build and self-maintain such
equipment, CW will remain the common mode. The ITU has this global view
while many individuals have only an insular nearsightedness - their own
personal goals out-weigh those of the global amateur community.

(Daily worldwide comms don't normally take place above 50 MHz, so a common
mode in that region can be chosen on a national level; for us it's of
course FM phone.)

Follows-ups directed to just .policy:

>Christopher Cox <cobox@netexp.net> wrote in message
> Written a good FFT PSK algorithm lately? No? Yes? How about all you
>other 'old timers'? Why not? Too difficult? Hey, it copies when you
>cannot even make out the signal, and with very little bandwidth.

Did you enter that self-written algorithm in your home-built computer?
Want to have a race to see who can get on the air faster - you with
your home-brewed digital station versus me with a home-brewed CW
station?

(Let's try to delete the .space NG from any further fol-ups; I placed
only .policy in the fol-up line.)

>
> > > I see no need to know CW.

That's largely because you've never learned it. What have
we been saying - if you don't learn it to get the license
you never know what it amounts to, or what you're missing.

> I think all the old coders are just scared
> that if they drop the code the will come out with a more diffcult exam
> for HF that you guys can't pass.
>

How's that again? 'A more difficult test that you guys
can't pass'???
Well, the tests now don't seem too hard to memorize the word
associations to pass, no learning is needed, you know. That
doesn't seem likely to change soon.

> > The problem is, is the old HAMS think "Well, we had to go through hell to
> > become a HAM, so should everyone else".

This is one area where you no-coders really stumble. It
was NOT "hell", but rather a most interesting learning
process culminating in a feeling of solid satisfaction when
all the tests were successfully completed. Gee, so sorry
that you'll never experience all that. Your loss. But, I'm
sure you, like the rest of the no-coders, will be able to
live with it, once your cheap-'n-easy HF license is in hand,
no learning needed and little or no code. That's a very
visible characteric of the code bashers.

Did you see to it that the drunk was prosecuted and sent
to prison for this stupid criminal act??? If not, you are
part of the problem....
It's "forgiving" people for stunts like this that eventually
leads to murders-by them. Person capable of such actions are
the people who MUST be locked up - for they are the vast
majority of thevery people who ARE violent crime.

No, they would shoot themselves if they tried wires. Their poor brute force
operating is compensated for by their arrays. Funny, they still can't buy a
LIFE though, which they sorely need.

Besides Jim, you drive a Good Humor truck for quick access for you and your
(taste) buds.

>

I could spend 25 grand on an antenna array, but then I'd need to add on
expensive therapy and medication like you and Bill. Besides, I let you
jackasses spend the dough, I get half the benefits for free. Morons.

That's not to say a beam or two is bad.

Talk about needing a life, though- why win a radio contest every time, at will ? There's fun and variety. Contesters are the people who damn near flunked out of gym, so they found a niche where they can get trophies as adults.

And I'd love to be the boss or coworker of one on Monday morning. Can you say zero productivity ?

Contesters have manners to match; they are actually poor operators who need to rely on brute force and the toy duck shoot known as a contest.

Even worse than that.. I drempt that I was Woody Allen in a former life.
When I woke up I realized that that would be impossible as we are both alive
at the same time...Maybe we were both the same person in a former life and
that accounts for it. Can I ever find out if Woody Allen would even dream
that he shared a former life with me? No...That is why I'm not so sure about
reincarnation even though I understand Zelig. Bob Wex w2ilp (I Lived
Previously???) -- .- -..- .. --

Reincarnation might be a catch 22 if Yossarian lives and breathes!

Jack, A store close to me has a Kenwood TS-700A All-Mode $200.00.....
2Meter, AM/SSB/FM/CW This one in particular has a added Pre-Amp also...
The Store is " Michigan Radio" The phone number is (1-800-TRU-HAMM)
I owned one of these rigs, and had a blast with it... They got it on the
used rack,
Call and ask.... Good luck, You'll love this rig... Jeff Swiger-N8NOE

Jeff, Your first statement is not correct. Japan and others have already DROPPED there Code requirements. I'm not a fan of CW, but I also don't think is necessary as a mode of High-Speed communications.. Jeff N8NOE

I know a lot of obsolete skills too. Tape editing with razor blades and
tape come to mind. Perhaps that will save my life in some emergency
when my digital audio workstation breaks, or will allow me to edit in
bad weather conditions.

No you don't. What you see on the "news" is the misleading, inaccurate, self serving political views of the liberal media.

When it comes to guns, what the media reports and what the truth is are two different things...

Tedd,
Substitute a dummy load and see if it does the same thing. If tx into a dummy load is OK, you have an RF feedback problem. Try creating a balun by coiling up your coax (10 turns around a 6" form) at the rear of the rig. Also, try beefing up your entire station's ground system. Oh, and try substituting a different mic. These steps should narrow it down.
Tom, N2LDE

I never mentioned WHO wrote it! Whatever name was there, came from the
post I replied to, I never use names as they have nothing to do with the
discussion.

> I do not wish to WAIT to get my General privileges so I'm continuing to
> work on my code.

OK. Good luck.

It could be another year or more before any restructuring
> takes place. Why wait?

You don't have to. But I did for the technician class, and didn't have
to learn a part of Ham radio I have no intention of using because I
waited. I also wait for Ham radios to go on sale, you may say why wait
and pay the extra $$$ because you want the radio now. To each his own.

Will I USE code? Probably not, it doesn't interest me.
> But to get my General I HAVE to pass the 13. I passed the General written this
> pass Sunday but failed the 13, my practicing continues...

Good luck.

Yes, even when morse code is not a requirement for any license, the
attitude will still remain because of the different "classes" of
licenses. Extra class will look down upon General class even though
they both have privileges on the exact same bands. There is no reason
NOW to have General, Advanced & Extra other than to promote the cliquish
elitist attitude you mentioned and divide Hams into different groups.

If there were just ONE Ham license, you wouldn't have all this BS.

2226. Re: Another nice thing about CW.

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-28 00:00:00 UTC

This is EXACTLY the attitude that is causing the all the problems with
this code/no-code debate, and I really want to grab everyone who
thinks like this by the throat and slap them silly while yelling at them
"ARE YOU THAT F***ING STUPID????"

It's this attitude that anyone without CW skills, or with 'lower' CW
skills
than the person doing the evaluation as 'less' of a HAM. The BULLSHIT
attitude that some people have that the license was a final exam that
granted rights and privlidges.

In my mind, and remember, my opinion is more important to me than
your opinion, is that ANY AND ALL licenses are ENTRY EXAMS, to
get you into the hobby (it's a hobby, not a lifestyle as some people
that
appear to have no life seem to forget) so that you can learn and grow,
not stagnate.

ALL the below are VERY CORRECT and TRUE, BUT,
is that ANY reason to use it on a TEST for getting your ticket
keep the subbands..if you want, EXPAND them if you like
IF we use this MODE to test people should we not have a test to see if you
can talk correctly for phone, type correctly for packet,
and expand that by building your own computer for digital modes.
THAT'S ALL I AM AGAINST IS FOR A TEST
keep the mode if it makes you happy but don't use it for TESTING.

Just a fine point -- S-Tec has the Micro Line series of products, including the only Micro Line II radio to make it out - the VHF-253.

Collins announced a new set of "sensors" (radios) in the last week or two (see news archives at http://www.rockwell.com), had the press in, etc. etc., so it should be showing up in the aircraft mags in the near future.

I'm about to buy one of these high end receivers and
don't want to make a mistake. Please help me to
avoid being disappointed. Both receivers are used,
but appear to be in good condition. I'm not able to
see either of them, as they are being sold on-line.

The Racal 6790GM is surplus, but appears to be in
good shape with five original crystal filters: .4, 1.6,
3.2, 6.8 and 18 KHz.

The Watkins Johnson HF1000 Is in mint condition,
with all the original equipment. (box, manuals, etc.)

If you have experience with either (or both) of these fine
receivers, Please reply here. Thanks ever so much.

2235. FS: Tranquil Ham QTH in Central NJ

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-28 00:00:00 UTC
From: "Joe Giacobello, K2XX" <k2xx@concentric.net>
Message-ID: <3727F61C.30086DD2@concentric.net>
Source record: 144439

K2XX and K2XXX are selling their QTH in central (Green Brook) NJ and moving to the wilds of western Virginia. The QTH is located in the first ridge of the Watchung Hills, overlooking the Raritan Valley, with a line-of-sight view into Manhattan (25 miles away as the crow flies), Long Island and thence Europe and Africa. The view to the west isn't bad either, but the Rockies get in the way. Green Brook borders Plainfield, Watchung, Warren, Middlesex, Dunellen and North Plainfield, NJ.

The QTH includes a 72 ft. motorized Triex crank-up, tilt-over tower with a six band quad on top: four elements on 10, 12, 15, 17 and 20 and seven elements on six meters, all on a 24 ft. boom. There is also a Wilson TT-45 forty-five foot crank-up (manual), tilt-over tower with a 13 element two meter Yagi, a 24 element 432 MHZ Yagi and a Diamond vertical collinear for two meters. Attached to the chimney are circularly polarized Yagis for Oscar (144/435 MHZ) with azimuthal and elevation rotors. Finally, there is a 102 ft. long center fed Zepp that I use for 30, 40 and 80 meters. This whole package comes along with trained neighbors. I know it's hard to believe, but they actually help me put up and maintain my antennas. I have consistently run 1.5 KW at this QTH for more than 19 years with practically no RFI. What little there has been over all those years, has been easily and amicably resolved. My relationship with my neighbors is excellent.

As if all of the foregoing were not enough, there is also a comfortable, cozy home, a wonderful neighborhood, convenience to shopping and transportation, excellent schools and immediately adjoining neighborhoods where the home values range between $500,000 and $1,000,000.

The house was originally built in the late 30's but has been renovated several times. We made a major renovation in 1987 and followed up with a new kitchen about five years ago. There are three bedrooms, one of which we use as a shack. The accompanying walk-in closet is used as a workshop. All of the bedrooms have walk-in closets. There is a modern kitchen, an office, a living room with stone fireplace, a sun/dining room, a screened front porch, a large front patio, and a large rear deck. There is an oversized, detached, two car garage with a large workbench and additional storage. While the official lot size seems small (75X100'), its effective size is much larger because the adjacent streets do not use up all of their allowed right-of-way. The lot and its surroundings are shielded by an abundance of mature deciduous trees. The property tax is about $3400 annually.

Rail transportation to Manhattan is five minutes (three miles) away at Dunellen. The trip to Penn Station is about 55 minutes. Route 22 is only two minutes away and I-78 (Exits 36 or 40) is about eight minutes away. I-287 is only 10 minutes away.

High school students from Green Brook Township attend Watchung Hills Regional High School, a highly considered public institution noted for its academic and athletic excellence.

If you have any interest in owning this QTH, please contact Joe at 908-756-3825 or via e-mail. If there is no interest from hamdom by June 1, we intend to offer it, though somewhat sadly, to the general public at that time. The price is firm at $255,000.

73, Joe
K2XX

Hello all,
I have a Dentron Clipperton L forsale. It has new
572b's, new band switch and all of the Capacitors and diodes
have been replaced. I have schmatics too. The amp is wired
for 220 with 100 watts drive 1200 watts out on 80-meters.
The band coverage on this amp is 160-15. I'm asking 500bucs
plus shipping. If you are interested drop me a line. You
can see a picture of the amp as well as my station by clicking
here. http://www.dirtball.com/station.html

Target: undisclosed.recipients

Welcome to the W8MMQ Wire for April 23, 1999! This newsletter is distributed weekly by W8MMQ and the Radio Society of Central Michigan, and is available free to all radio amateurs.

If you would like to receive this newsletter via email, or would like to be removed from our mailing list, contact Dan, W8MMQ, at w8mmq@voyager.net. Your email will be answered as soon as possible.

Stories in this week's newsletter:
o What Happened to the Beatnik?;
o Hollingsworth Makes Surprise NAB Appearance;
o Retests and Short Term Renewals;
o Upcoming Amateur Radio Contests;
o And much more!

WHAT HAPPENED TO THE BEATNIK?
Last week we reported that the Swatch Watch Corporation had cancelled the controversial "Beatnik" mission. The company agreed not to launch the satellite.

But now hams want to know what happened to the little satellite, called Sputnik 19. If it wasn't launched, then were did it go? There have been mixed reports regarding the satellite; some hams have listened, and said that the Sputnik 19 is not transmitting, at least in our ham bands, while other commericial media sources say that the satellite is indeed operational, and transmitting.

Although the media is saying that the satellite is transmitting, no amateur radio reports can confirm that. We will have more on this story should it develop.

--- W8MMQ/KC8KFZ

HOLLINGSWORTH MAKES SURPRISE NAB APPEARANCE
Amateur Radio rules enforcer Riley Hollingsworth, K4ZDH, got thunderous applause from those attending an Amateur Radio reception April 21 at the National Association of Broadcasters convention in Las Vegas. The annual get-together for hams drew upwards of 1000 people.

Hollingsworth's boss, FCC Compliance and Information Bureau Chief Richard D. Lee, was introduced by Ed Williams, W8APE, after Lee said he wanted to talk to the group. He, in turn, introduced FCC Compliance Division Chief Pamera Hairston and two staffers from the FCC's Los

Angeles Field Office.

Lee then sprang the surprise. Last year, Lee said, he'd promised the FCC would do Amateur Radio enforcement. This year, the FCC had Riley Hollingsworth, K4ZDH, doing a great job.

"When I turned Riley loose, I said, 'look, you're going to be going all over the place. How can I get in touch with you?'" Lee recalled. "And he said, 'Boss, I'm like Batman, it's real simple. All you have to do is call out K4ZDH, Riley, are you around. and I'll show up, I'll be there.'"

So Lee gave it a try. "K4ZDH, Riley, are you around?" After a pause, from the back of the room Hollingsworth piped up, "Here I am," and came forward to address the gathering.

And the crowd, as they say, went wild.

Hollingsworth credited both Lee and Hairston for setting the events in motion to secure better Amateur Radio enforcement. "Pam and Rich went to the chairman [William Kennard] last October and asked for amateur enforcement," he said. "At the time they went and asked for it, they were totally loaded up with pirate broadcaster cases, and the last thing they needed was more work."

But Hollingsworth said Lee, a former Marine, was serious about enforcement and, like the Marines, wants it done right. "They not only want all fronts covered, but they want them at the same time," he said.

As Hollingsworth prepared to leave the podium, Lee got the last laugh by quipping, "So, are we going to take this opportunity to retest everybody?"

--- Taken from the ARRL Letter, April 23, 1999

RETESTS AND SHORT TERM RENEWALS
The FCC is now using a pair of old enforcement tools in a new way. If you seriously break the rules you may wind up being called in for a retest and you may wind up with a short time license. Rick Lindquist of the ARRL Audio News has more:

The FCC's top amateur enforcer, Riley Hollingsworth, K4ZDH, says he plans to make judicious use of both the short-term renewal and retesting to boost amateur compliance.

Hollingsworth employed a short-term renewal as a sanction in a recent amateur case where a newly licensed teenaged ham was found to be transmitting music on a police frequency using a modified hand held. On April 14, Hollingsworth reinstated the ham's Technician license, which had been suspended, but imposed a one-year renewal. Local police in New Jersey had reported to the FCC that Mike Mustachio, now KC2EUT, had transmitted music on a police frequency for about 12 minutes on March 16, just days before his ham ticket was granted.

Hollingsworth said he spoke with the 14 year old licensee and his parents before making a judgment call in the case to go with a short-term renewal.

He expects the sanction might come in handy in other pending enforcement cases as well, but he still expects to use it only "in rare cases where there are mitigating circumstances and a good likelihood of compliance."

He said short-termed licensees may appeal, but then the case goes to a hearing, and the process can get much more formalized and complicated.

Retesting is another administrative prerogative that Hollingsworth has been taking advantage of. The FCC has the authority to request that any amateur who obtained a license through the Volunteer Examiner program retest either at an FCC office or using another Volunteer Examiner Coordinator.

Earlier this year, Hollingsworth notified a Delaware ham that she had to retake her Extra class examination or lose her ticket. More recently, the FCC asked a Michigan ham to retake his General and Advanced class examinations. Hollingsworth said this week that other retesting requests will be going out soon in several cases where licensees either have not responded to a written Warning Notice or where something about the licensee's actions or responses might have raised questions about the individual's qualifications.

He said the FCC also might decide to investigate or ask for a retest when it received "substantiated or well-founded complaints".

Hollingsworth says recent testing "recalls" should not give rise to speculation that the Commission intends to institute routine retesting.

"We're going to use this very carefully," Hollingsworth said. "We don't want to scare everybody into thinking that they could get a recall in the mail."

I'm Rick Lindquist, N1RL.

Hollingsworth says that the recent spate of retests should not give rise to speculation that the FCC intends to institute wholesale retesting. He indicates that those retest letters are being reserved for those who have done the very worst.

--- Taken from Amateur Radio Newsline, April 23, 1999

UPCOMING CONTESTS AND EVENTS
For the latest amateur radio contest information, visit the ARRL's Contest Calendar, at http://www.arrl.org/contests/. Also, for the latest information on upcoming events and hamfests, visit the ARRL's Hamfest Calendar, at http://www.arrl.org/hamfests.html.

The North American High Speed Meteor Scatter Contest, sponsored by the Western States Weak Signal Society, will run from 0000-Z May 1 to 2400-Z on May 9. Operate high speed CW only (99 WPM or higher). Operate on amateur bands above 50-MHz, and operate up to 48 hours during the

contest. Visit http://www.qsl.net/n7stu/hscw.html for more contest information.

The Ten-Ten International Net Spring CW QSO Party, sponsored by Ten-Ten International, will run from 0000-Z May 1 until 2400-Z on May 2. Operate CW only, 10 meters only.

And, the US IPA Contest, sponsored by the International Police Association Radio Club, will run from 0000-Z May 1 to 2359-Z May 1 (for CW) and 0000-Z May 2 to 2359-Z May 2 (for phone).

DX REPORT
From Senegal, 6W1PZ, 6W1EX, 6W1RD and 6W1QP will be active from zero hundred UTC on the 1st of May until 1700 UTC on the 2nd. This counts as AF-045 for the RSGB Islands on the Air Award Programme.

From West Malaysia, 9M2TO/P will be operational from the 1st to the 4th of May on six to 40 metres. This counts as AS-073 for IOTA.

From Gaudeloupe, FG/JA1WPX is on the air from today, the 25th of April, until the 2nd of May on 10 to 40 metres, using CW and SSB. This counts as NA-102 for IOTA.

And from Tromelin Island, FR5ZU/T is active until the 4th of May on 10 to 40 metres, SSB. This counts as AF-031 for IOTA.

Information contained in the weekly DX Report is taken from the Radio Society of Great Britain. Visit the RSGB web site, http://www.rsgb.org/, for more information.

I have a virtually new FT-736R with both 6M and 1.2GHz modules installed.
Orignial owner, purchased about a year ago, one of the last. Absolute mint
condition and perfect operating condition -- used little. Also has FM CTCSS
module installed. To be sold only as complete unit as listed -- the ultimate
in VHF/UHF/satt radios. Serious buyers only please! Asking $2000 (original
discounted retail more than $3000) and has both the owner and service
manuals. - dont want to sell, there will never be another VHF/UHF box like
the 736R but cannot keep the investment waiting for Phase 3D.
Expanding shack in other areas. Free 16 element 1.2 GHz yagi (commercial)
with
purchase!! ($100 original cost). Have original 736 box and packing for
shipment!!!
Contact Bob / N6MTU / email: magill@ix.netcom.com --- will call and discuss
with serious buyers.

Is this besides the fact that knowledge of CW is required by international treaty for access to certain frequencies? Or are you suggesting that the government simply ignore the treaties and make it's own rules?

Even the world of no-coding is very enjoyable, As a custodial single parent, I do not have the time to spend on code practice, and neither the time nor money to buy HF equipment with. I primarily operate VHF mobile, although when I do find a little time I like to play with antennas in my backyard (see http://www.tfn.net/~gfloyd7/antenna/) and have found that 2 meters is ideal for this as the antenna is small enough to be easily built. Although I do not have my code out of the way, I would hate to see them eliminate it altogether. It is a very proud tradition of amateur radio, can be heard even when voice cannot, requires no real special equipment (keying your mike on AM or FM would work), and is required by international law. So who are we to tell the government to ignore that law?

Not even the FCC. Ever hear of the ITU? Or is looking that up too much work for
you?

>
> >> Sit there and get upset all you want, resent us for things being easy,
> but the fact is, FCC will be dropping
>

I don't resent you for anything. I'm a no-coder myself. But I don't whine like a
baby because I don't have HF priviledges either. I haven't earned them, so why
should I deserve them? As a single parent with no time for study or HF
ragchewing, VHF mobile operation suits me just fine. If at some point in the
future, I have more time to devote to the hobby, then I would use some of that
time to brush up on my code at least to the standards required not only by the
FCC, but by international law.

Need to check the steering diodes in the BC BPF for leakage. Quite often
the case with sets that have
had an open antenna attached while exposed to wind static, nearby
lightning, or transmitting into the
receiver, inadvertantly, of course. The latter usually takes the shunt and
some of the attenuator with it though. I think the other dude was trying
to say "things that do many things, can't do one thing well."
While there may be some truth to that statement, I find it hard to beleive
that the R&D team would
overlook any image, conversion mixing, or overload products that would
land(at least) in the amateur bands.

This isn't a slam against the Gordon West books you find at Radio Shack but I find they're more rote memorization than actually learning the theory.

I'll shamefully admit that right up through 3B I used the West books. For my 4A I bought the ARRL book and it really walks you through the theory. I won't even say how I did 4B... I'd be too ashamed. :)

Hey, with a relay, small audio transformer and a nine volt battery I can make a pretty awful spark gap. As a kid I built this little device out of curiosity - one of these days I should build it again and measure the current and voltage coming out of that thing.. I used it as a shock box but now realize the RF spikes must have been phenomenal.

As an Okie living here on "The Island" for about 9 months, my observations would lead me to answer your question in the affirmative.

It's not quite the same arrogance as that of, say...a Californian. No, left coast people would be better described as 'smug,' a subtle form of arrogance. It's based mostly on the opinion that the rest of the country isn't as pretty as California.

East coast arrogance is based more on the fact that people here are oblivious the fact that there is anything west of the Hudson river. They like their chaotic, miserable lifestyle, for it's all they've ever known.

But we know better, don't we?

Donning my fire-retardant jumpsuit.

Travis

Based on FCC enforcement against a 3-4 hams (not CBers) I'm
increasingly believing 27.555 will live long -- right along with the
wide variety of non-type accepted radios and linears available from
just about every CB radio retailer on the web.

Well if you have to tune the stubs, would it also follow that you
would have to tune the section between the stubs? If so, how would
you do that?

CW vs. PSK31. PSK31 works with weaker signals, lower power, 31 Hz bandwidth- what more do you need ?

Now if they would ask tougher written questions on MODERN topics like DSP and ditch those triode tube questions from 1977, I'd support an eventually codeless HF, but the buttcheeks at FCC and ARRL HQ don't have minds that work that way.

Here, here!

I've been trying to explain to wife/family/friends for over 30 years, and haven't ever come up with a "reason" for using CW that satisfies those that don't have the experience. To those who have conquered their demons, learned to communicate via CW, and discovered the reward of it, no explanation is necessary.

If the code requirement is dropped (as it may well be), the incentives that lead one past the hurdles of learning the code, to the most rewarding experiences offered by CW, will be removed, and perhaps the ranks of CW ops will diminish. Some will be happy if this should be the case.

I think it's interesting to observe, that since the proliferation of digital modes in the last ten years or so, CW activity on the ham bands seems to have grown, not diminished, both here in the States and internationally. Considering that many countries don't have a code requirement anymore, I wonder why that would be, if it truly is a dead mode?

Saying CW is dead is kind of like saying pianos are useless because PCs with sound cards can make more sounds, and never need tuning. Those who play or listen to fine pianos can instantly perceive the difference, and those whose minds are made up won't be listening for pianos in the first place.

When I got started 33 years ago, I struggled for a year to get my code speed to 13 WPM so I could get my "general" ticket and move on to fone and rtty operation. But 99% of my operation since then has been CW. Go figure, huh?

You do not need any battery. The very long outside wire gets enough "pressure" that a battery is not needed. I mae one when I was in Junior High School. Only bought the headphones and the germanium crystal. I made everything else. I picked up the local station KDKA the night before the Science Fair. I had a long antenna wire in the back yard. No batery needed. (I had my parants listen to prove to them it worked..I could not set up the antenna at the fair. so it did not work there. Just the night before at home.) I got the plans from the 1966 Comptons Encyclopedia we had.

Yeah, but. . .what other communications methods are achieved via CW? You are correct, strictly speaking, CW * Morse code. The misnomer is as old as the vacuum tube, though the FCC can be forgiven a bit of idiom and tradition, can't it?

That's an interesting question; should we consider a no-code license
to be a valid end-point for those who aren't interested in the extra
priviledges, or only a stepping stone to a "full call"?

I imagine that there are probably a lot of people around who are more
interested in VHF, UHF and microwave than they are in HF, so a no-code
license suits them just fine. The Australian "limited" licenses allows
all-mode, full power only all bands above 50MHz.

Hamish, who took the code exams 4.5 weeks ago and STILL does not have
his results. Unimpressed.

Howdy Cecil.....Interesting point - often confused.....CW, MCW etc are modes of operation for a signal source.....morse is a mode (method) of communicating information, like voice etc. I know you know the difference of course....what I see is when green hams (we were all one eh!) start to confuse all this not understanding that you can send morse over an FM circuit by keying a tone or by calling that CW. Then they're scratching their heads the first time we show 'em a signal generator heheh.
I think we all ought to make our "tech" talk a little more accurate by times...maybe.

Check out this URL:

http://www.clarityconnect.com/webpages2/arcsandsparks/crystalradiopage.html

There are two types of crystals that can be used.

The original crystal set design used a "cat's whisker." It was a piece of galena crystal fixed into a base of some kind with a very thin wire mounted on a movable arm over the crystal. The thin wire was about the size of a cat's whisker. The point where the wire touched the crystal formed a dissimilar junction that served as a half-wave rectifier to "detect" the radio signals and make them audio signals that were fed to the earphones.

I have built crystal radios using a 1N34 or 1N34A diode, available from Radio Shack. The difference between the 1N34 and the cat's whisker crystal arrangement is that, with the old arrangement, you had to move the wire around the crystal to find a sensitive spot. With the 1N34, nothing is movable.

The URL that I cited above is devoted to crystal sets.

2276. Re: Building your own transceiver

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-28 00:00:00 UTC
From: Joe Schlatter <w4hh@3wave.com>
Message-ID: <bfDV2.17$I3.1917@news12.ispnews.com>
Source record: 144515

Building from kits can be a fulfilling experience or an exasperating experience.

Back in the good old days -- back when men were men and radios had tubes -- there was a grand company named Heath, they produced Heathkits. Their instruction manuals were VERY detailed, step by step. I built several Heathkits and never had a problem with any of them. Every one that I built fired up the first time and I still use some of the Heath gear. Sorry to say but they went out of business a few years ago. Could not compete with the rice boxes that are standard now.

There are lots of kits out there. Some are top quality, others are a few steps above junk. And, the real question is: instructions. If you have a decent background in reading a schematic, winding toroids, placing parts, soldering, and the like, then you can build a kit with a pile of parts and a schematic. If you do not have that sort of experience, and the kit consists of a bag of parts and a schematic, then you could be in trouble.

You might try a couple of things.

Go to the newsgroup rec.radio.amateur.equipment. Also, see if you can find a newsgroup rec.radio.amateur.homebrew, or something like that. Those NGs have a lot of guys who build equipment. Post a message on those groups and give them the name and manufacturer of the kit you propose; ask if anyone has built that kit or has experience with that manufacturer.

Check through back issues of QST magazine for their product reviews. Occasionally they review a kit.

You could write the manufacturer, tell them that this is your first venture into kit building and you would like to see a copy of their instructions. That will tell you a lot about them.

I have built kits by Heathkit, Ramsey, VHF Engineering (now out of business), Oak Hills Research, and S$S Engineering. Heath was far and away the best -- top-quality parts, excellent instructions. S&S Engineering is top notch, also. They make only HF CW rigs; the parts are MILSPEC, instructions are detailed enough, and equipment is solid. Ramsey is average -- I wonder about the quality of some of their parts. Oak Hills Research was the company of Doug DeMaw, now SK, W1FB; had a line of fine QRP rigs. VHF Engineering had a line of top-quality VHF kits, but their instructions were a little light.

Building you own is gratifying like nothing else you have ever done.

Good luck and let me know how it works out.

Well, sorry that the fonts messed up the drawing. It's
pretty easy to tune the series section. Use 'T' connectors
for connecitng the stubs, the input line, the output line,
and the series 1/4 wve section.

Build the 1/4 wave series section by soldering a connector on
one end only, then temporarily configure it as a stub in a simple
test setup. Then tune it for a notch on the desired frequency
by snipping off little bits of the non-connectorized end. Snip off
just a little bit more to compensate for the connector that you will
then be putting on the open end. Install the connector, and you
now have the series line section.

Joe:

Disregard the nonsense in this thread slamming the way you got your license, your Radio Shack rig, and the rest of the naysayers. Most of those folks are sad old dingbats who have no life beyond degrading others. Sorry to say that amateur radio has its share of assholes -- and I sometimes feel that, if assholes could fly, this newsgroup would be an airport.

Here are some tips.

1. Check out the ARRL (American Radio Relay League) web site.
http://www.arrl.com
Contact them for the names of ham clubs in your area and contact some folks at a local club.

2. Go to this URL: http://www.qrz.com This company maintains an updated list of call signs, names, and addresses. On their page, you can search for hams by call, name, or location. Search for hams in San Diego; look at the list or search results, find someone who lives close to you, and telephone him/her and ask for some help. More than likely, you will find a helpful ham.

3. Listen then talk. On 2 meters (144 - 148 mhz), most repeaters freqs are offset by 600khz. That is, you transmit on 146.34 mhz, the repeater receives on 146.34, then retransmits your signal on 146.94 (600 khz up). If you listen on 146.94, the radio should automatically set itself to transmit on 146.34. So, listen on the common repeater output freqs: 146.61, 146.64, 146.67, and so on up to 146.97. Listen to operating procedures, courtesy, etc. Then, get up the nerve to press the push to talk button. Announce your call sign and stand by. Someone will come back to you -- tell them that you are new, this is your first contact, and take it from there.

When you get a ration of crap from someone about your no-code license, your new-guy status, or any other irrelevant foolishness, kindly thank him for his help, and leave. Most hams are nice people, it's just that the big pieces float to the top.

It doesn't matter what "we" consider it to be or not to be. The
authorities consider it a valid end-point. If they didn't, they
would have made it non-renewable like the 50s novice license in
the US.

You are absolutly correct, that it is written for DOS and is a little antiquated, however, I have found that 80% of the programs written for Amateur Radio, are written for DOS. You really don't have to use the PDF format handbook. There is a full text version available and all the help you need is built into the program.

You are also correct, that it can hang computers. They tell you this up front that some hardware/software configurations may give you trouble. Trying to get around these may cause you a lot of grief. But, there is a very simple way around all of this. Morse Academy fits very nicely on a 1.4 MBytes floppy. If you create a bootable floppy, which can be done from any operating system, W95/98, Windows, or DOS, and then install it there, everything works great. You can add a auto execute startup file so that all you need to do is insert your floppy and boot the computer. Morse Academy will start automatically and not have any problem with the hardware/software configuration of the computer. A minimum of DOS commands and troubleshooting. The floppy is then usable on any computer, because, like it or not, they all still run DOS.

I can't say much about the learning portion of Morse Academy, because I didn't need it and didn't use it, but I particularly like the automatic test generation and playback for the different test classes. Easy to use and fairly intuitive, at least for me.

Everyone is going to find one that they like better than others. I tried about 10 others before I settled on Morse Academy.

Well, just my $0.02

Can anyone help with the wiring for a Collins VHF-251 air-band radio please?

The radio is at least 10 years old and I cannot find any documentation.

It has a 25-pin male plug on the back (looks just like a computer serial plug)
and I would like to know how to connect it up.

Thanks very much,
Bill.

Does it work on close-talking hams at flea markets ?

The perfect H-T for Field Day? Just when you thought modern
H-Ts had included just about every feature conceivable, along comes
Alinco with its new DJ-195T that includes--get this--an experimental
"mosquito repel" feature. Alinco USA Branch Manager Katsumi Nakata,
KE6RD, says the unit emits an electronic tone to keep the annoying
insects away from the vicinity of the radio. "It's a feature we added just
for fun," Nakata said. "The mosquito repel feature could make the
DJ-195T the first radio capable of de-bugging a Field Day operating
position," he added with a smile. (Hmmm. Was that announcement dated
April 1?) Other unusual DJ-195T features include a theft alarm that can be
set to sound when the unit is removed from an external power source,
such as in a vehicle. Alinco Sales Manager Doug Wynn, KB6YZD, said
the new features reflect input gathered directly from hams. The company
also has just announced its new DJ-V5T dualband compact, 5-W H-T.

Look at any news story you read or see that has anything to do with a subject that you are knowledgeable on and you will quickly see how erroneous the reporters are on details. At times this is done on purpose to promote any personal goal of the reporter but in general it is because the reporter really does not have a clue about what they are reporting and are much more concerned about having a story that sounds good and gets a lot of sensational response than is accurate.

>100 to 200 discrete color changes in any one scan line. S-Video would be
>higher, but not that much.

Actually, NTSC is *not* a compression scheme. Resolution is limited by the bandwidth allocated for the signal, and by the scan rates chosen. Typically, horizontal resolution is about 225 lines, but because it is interlaced, the effective resolution is actually about 450 lines. Vertically the resolution is limited by the scan rate to 262.5 lines per field, doubled to 525 lines by interlace. (Because of the way the lines of a test chart fall on the interlace, the vertical resolution is actually only 262 lines, IE to resolve a line requires a transition, and that requires two vertical scan lines to reproduce.)

If this doesn't quite make sense, picture a test chart with vertical and horizontal lines drawn on it. The vertical lines are resolved by the horizontal bandwidth of the TV, and the horizontal lines are resolution limited by the number of scan lines in a field. So NTSC should yield a resolution of about 450x262. It usually doesn't quite do that well horizontally because most receivers aren't adjusted to recover the full transmission bandwidth. 320x200 is closer to what you see on the typical home receiver with an off the air picture.

But that's not nearly as bad as it may sound to computer types used to talking in terms of pixels. NTSC is analog, a transition can occur *anywhere* on the screen. Transitions aren't limited to discrete locations as they are in computer displays. This yields an *apparent* resolution which is much better than can be achieved with a CGA computer display. For example, there are no jaggies on slanted lines with NTSC, but there are with computer generated graphics. This analog nature also shows up benefically for objects in motion. The movements are all smooth.

Hue is also analog, and can vary in infinitesimal steps. You aren't limited to a preset number of colors as you are with a computer display. This turns out to be very important because the human visual system is more sensitive to differences in hue than it is to differences in spatial resolution. That's why TV pictures look lifelike while higher resolution computer displays still look like a cartoon. The *apparent* resolution of NTSC is a close match for 16mm film (that was chosen deliberately when the standard was formulated).

Of course, from the way the poster you're answering spells color as colour, we can assume he's in a PAL country. The bandwidths and scan rates are slightly different for PAL than for NTSC, with the advantage going to PAL. So he should see somewhat better resolution than we would.

To approach the apparent resolution of NTSC requires a computer display running 800x600 with 16 million colors. It will still have visible artifacts that will identify it as pixelated compared to an analog TV signal with moving pictures, but it will be close to the same visually if you sit back from it the standard 9 feet used for TV viewing.

Now HDTV *is* compressed for transmission. That's a different kettle of fish entirely. Channel bandwidth would have to be over 100 MHz to transmit HDTV without compression. HDTV uses MPEG 2 compression to reduce the bandwidth to fit in a 6 MHz RF channel. MPEG 2 is a lossy compression, so there are artifacts, and the HDTV picture is wider than NTSC, so it *needs* more horizontal resolution to equal the apparent sharpness of NTSC.

The end result is that HDTV at 1080i has about twice the apparent resolution of NTSC. It looks really good, about equal to 35mm movie film (again that was a deliberate choice). But because it is digitized, and because of the lossy nature of the compression, there are some artifacts. You'll notice some strobing on areas of solid color. Jay Leno's desk is a good example. In the two shot with the guest, you can see a bit of strobing of the desk. Still, the amount of detail you can see is really breathtaking. The closeups during Jewel's number Monday night had you believing she was in the room with you. (The 5 channel surround sound doesn't hurt the realism either.) When Jay goes into the audience, you feel like you are there in the audience too. There's none of the fuzziness and loss of depth of field that you get with NTSC. (The latter is partially due to the way the show is lit, of course, but it is mostly due to the inherently higher resolution of 1080i.)

I have a Kenwood TS-140 HF rig that has a wierd problem.
When I got the rig, TX audio was garbled on all bands.
I found and repaired the bias circuit for the finals.

Now when I try and transmit on 20 meters, the power is
fine for the first 2 or 3 sylables, then drops off to
about 10 to 15 watts. As I was trying to fine the problem,
I noticed that if I remove the PA section from the main
rig far enough that the chassis don't touch, the problem
goes away and TX on all bands is fine?

Does anyone have a clue what could be happening?

Joe,

There are options other than the West books and preparation courses. As you might already have noticed, the tests are setup so almost anyone can pass them with a minimum of effort. The ARRL prints many titles, quite a few aimed at the new ham upgrading his license. I am preparing for the general, so I bought their study guide. I found that the same information can be found in many other places, but it is very helpful having it all in one place, in the amount needed to pass the test. I highly recommend their license study guides. The ARRL Handbook contains the same material in deeper depth, but it's not as appropriate for focused study.

The Morse code elements, I think, are best studied on your own using software, at a pace you set for yourself. A local club here offers a free nine week course. I attended the first class, listened to their tapes, and followed the class syllabus while studying on my own. Morse Academy, among others, were all ready to go with ARRL's character progression. It doesn't matter which one "method" you choose; just stay with it to the end. I passed my Tech Plus test two weeks later, but set your pace to allow time for your other studies.

Michael.

> Morse - Is a mode that allows communications to be copied verbatim
>easily (you can come close on voice or often do it if words are
>standardized but its not easy)......

Ask them to use phonetics properly and you'll get the same thing.

> - Is a mode that is indeed digital but which requires the
>most rudimentary interfacing and for which our own "processor" causes
>error correcting and speed compensating depending on the ability of the
>other "terminal" or "line" conditions.

IOW, it's intended to be human readable directly. Yes, that's an
interesting feature.

> - Is a mode which transcends language and dialect barriers
>when suitable signals are used...such as the international "Q"
>signals...and others. Hard to get most computer systems to do that yet
>and our ability to merely speak one language (english for example) with
>a wide variation of accents is hard enough sometimes.

That's not part of the code. Those are Q signals. You can use them
on RTTY, packet, and any other digital mode of communication you like.
What's the point?

> - Is a mode whose "standardization" is unheard of in
>communications, where for at least a hundred years was not obsolete for
>the purpose of basic communications (stuff that's GOOD for critical
>use...such as lifesaving...and cheap commerce).

Ummmm, No, it's not nearly as standard as you make it appear. Ever
heard of Continental Morse? How about all those other alphabets in
"morse"? How about punctuation?

> - Is a mode which, when the equipment is tired....just
>needs a good dinner and a cup o coffee to revive it.....stuff we have
>around anyway !

Many other digital modes don't get Tired. They can even copy when
you're not there...

Rudimentary equipment? What about the "suitable narrow filters"?

> - Is a mode which, because it only requires very basic
>equipment, lends itself well to "field repairability".....a handy thing
>if you've ever sat in a remote spot and listened to digital signals that
>couldn't connect to you...telling yourself...."if they'd only just turn
>'em on and off...I could get the message! After all...what is
>slower....a slow sent message or one that never arrives????

Little if anything in today's appliance world is "field repairable."
The point of this statement is lost on me. Considering that an entire
SSB modulator can take place inside a DSP chip these days, and
considering how simple it has all become, one can reason that anything
home built is "field repairable." Morse has nothing to do with it.

>There's likely lots of other good and bad reasons why anyone should keep
>morse alive. Yep its old.....but well made and the fact that it hasn't

>transcends whether you were a mere ham or a skilled commercial operator,
>a struggling boy scout trying it or a pilot who was able to make himself
>understood when his mic stopped working. To that last end I can only

I'm a pilot too. When my aircraft has an electrical failure, I reach
for a battery powered hand held radio. Radio failures aren't as
common as they were in the days of king Tube. The solution used by
most pilots is to carry a battery powered back-up radio. Good luck
finding an air traffic controller who recognizes that someone is
sending morse code.

>offer that to those who WON'T use it...it will always be a thing
>despised....to those who do or have, a thing revered.

Yes, it's old. Yes I like to use it. No, I don't think it should be
kept around as an entrance requirement to this hobby. Get real.

Morse code is like horseback riding. It's nice to see folks still do
it. One can even argue that there are situations where that's the
best way to get around. However, those situations are very much in
the minority these days and getting more so every day. Do we really
need to prove that we can ride horses just to get a driver's license?

ARRL and Yaesu do not utilize the same legal firm.

Chris Imlay has represented both ARRL and Kenwood.
It would appear that some regrettable misinformation
in this regard has recently been distributed.

I fly out of a grass airfield too. And I also fly in and under the
Baltimore-Washington Class B airspace. I agree, interference on a
frequency would rattle a few, but on the whole, any decent pilot would
know what to do. If worse comes to worst, one can always talk
air-to-air with other aircraft.

>>Don't forget one of the best advantages of a stone simple VHF radio:

Yeah, sadly that's true. But in the old days it was pretty easy too,
what with military surplus radios and the like. The difference is
that today's sociopaths are more technically capable. I don't know
why this is, but it sure seems that way.

My second hand info stands corrected, although who really cares ? So from your words it's regrettable that Kenwood and ARRL use Imlay, but you were so unphased by the notion that Yaesu and ARRL did, that you rushed a retort out ?

Another perfect contester who thinks he runs the spectrum and the internet.

While you're at it, why don't you address the quality control problems there and never mind quality control and spin of USENET posts ?

I have owned Yaesu rigs in the 70's and 80's. Yaesu DOES have some innovative designs- the 847 concept is long overdue. They just need more work on quality control these days.

most people have no idea what an automatic weapon really is.most do
not know that you can legally purchase a full auto gun if you pay the
$200 federal fee. Clinton's crime bill did not do anything to stop
this crime either. It just meant that they [the shooters] had to carry
more 10 round magazines than if they had 14-18 round magazines. 10
magazines is just 5 apiece, not much really. In reality they were
lightly armed and it was the police and SWAT teams who were the
cowards and the main reason so many died.

That is why GOD gave us the Bill of Rights thru our Founding Fathers,
to protect us from a future evil government. NOT so we could go sport
or game shooting like Clinton tries to make it out to be.

PLUS it looks like Clinton is getting ready to send ALL the troops out of the country to fight in his Balkin War. In which case we will be defenseless in Y2K and need to take care of ourselves. The police in Colorado showed us that if you are in danger of being killed and call 911 it might take 4 hours for the police to get to you ... so you are on your own and better be able and prepared to defend yourself, your family and your property until they get there.

No, not really anymore. The OO's came from years ago when signals were unstable, people drifted out of band, spurious emmisions were quite common, and people commonly used a different receive frequency from the one they transmitted on. In other words, compared to today, out of band and harmonics were quite common. This is not the case today. I know of not a single ham that is not certain the frequency that he transmits. And harmonics are much less common now. So really, a OO doesn't have to much to fill his time with. I guess having OO's can be a good thing, but I'm dubious of the level of expertise needed to be a OO by what I've seen over the last few years. I propose really, ALL hams are OO's in effect if they notice a problem with a station. Why a OO status? It's rather silly I think. I think EVERY ham is an OO as far as problems noticed. I know if I hear Joe Ham chirping on 7.050, I don't need a OO ticket to let him know about it. I just do it. Right there on the air, real time. No OO'ing required. MK

> K5PF
Don't blame it on Bill. That was me that said that. You have to be
carefull on the threads. That was a post to Noimd or whatever his call
is. And I know for a fact he is fairly inexperienced on HF. But being a
tech plus or whatever he is , thats to be expected. The example I posted
about was no stretch of the imagination. The OO that sent that notice
was close to the ham he sent it to, if I understand correctly. He should
have expected that from a very strong signal. I've never had an OO
report but I know quite a few over the years that have gotten them. 70%
should have never been sent of the ones I know about. Some of these were
downright silly. For a person to be a OO and send notices about, he
should be very carefull, and use proper test gear in cases where it's
needed. Most don't have this gear. I'm not saying all OO's are bad or
are not carefull, but I've seen many that were nothing but a nuisance to
all involved. Those really wanted to play radio police more than
anything. Like the case of the OO sending non-id notices to a pack of
hams using automatic cw id devices. That in itself makes me wonder about
the level of experience needed to be a OO. :/ MK

If you are being sarcastic...I agree.If you are being serious,you have
absolutely no idea what Amateur Radio is all about and you will NEVER
feel at home talking with 'true Hams'.

PLEASE!!!Dont let my post discourage you.You seem as if you will be a welcome addition to the ranks of 'Amateur Operator'.Also,dont let the lack of classes discourage you.Back in '91' I went from Novice in May to Advanced in December,with a 2 month 'break' (from that damned CW) in between.I did it and am a better op for it.I know Hams who attended classes and had their license 'handed' to them....many are 'stuck' at the Tech + level....Do it on your own.

I am considering an open circuit coaxial notch filter for Mode-J (FO-20/FO-29 satellite) interference rejection. Reason I am considering an open circuit is to permit DC continuity (for preamplifier).I would use RG213 double shielded equivalent cable.

What 1/4 wave multiple would be best to trap third harmonic of 145.950 uplink without degrading loss or match at 2 meters??

My friend had to take the code test to get his Technician license. A few weeks later, the code requirement was dropped. Boy was he MAD!

Don't make the same mistake, code will be dropped on all classes at that next world conference. Unless you actually WANT to learn code because you will actually USE it, then by all means keep practicing.

Dunno, isn't it reasonable to say that NTSC *is* in part a compression scheme? (of course, there's a lot more to it!)

Without any type of compression, the transmission of color of the same resolution as the pre-NTSC B&W TV would require about 15mHz of bandwidth. Both lossless compression (interleaving the color subcarrier components between the sidebands of the B&W signal) and lossy compression (limiting the bandwidth of the color difference signals) are used to fit the whole thing into the pre-color 6mHz channel.

> Morse - Is a mode that allows communications to be copied verbatim
> easily (you can come close on voice or often do it if words are
> standardized but its not easy)......

It is much easier to copy something from English to English, It is much harder to copy something from a code back to English and thus more chance for error.

> - Is a mode that is indeed digital but which requires the
> most rudimentary interfacing and for which our own "processor" causes
> error correcting and speed compensating depending on the ability of the
> other "terminal" or "line" conditions.

Speech is compatible to 99% of the population's "processor", morse code only to a much smaller percent.

> - Is a mode which transcends language and dialect barriers
> when suitable signals are used...

What?! Neither my English or other foreign language speaking friends can understand morse code. This is a ridiculous statement.

> and our ability to merely speak one language (english for example) with
> a wide variation of accents is hard enough sometimes.

Yes, accents are hard enough, why make it MORE difficult?! If people can't understand a store check-out clerk in some weird accent, how many customers are going to understand him if he emits beeping noises from his mouth?

> - Is a mode whose "standardization" is unheard of in
> communications, where for at least a hundred years was not obsolete for
> the purpose of basic communications (stuff that's GOOD for critical
> use...such as lifesaving...and cheap commerce).

Yeah, that's why Police, Fire and Ambulance don't use it.

> is extremely effective, using suitable narrow filters at both ends, for
> solid communications under the worst circuit noise and conditions.
Completely worthless if the person on the other end doesn't understand code! (which is about 99% of the population)

> - Is a mode which, because it only requires very basic
> equipment, lends itself well to "field repairability"

A washboard is easier to repair than a washing machine too, but not a good reason to mandate people learning to use it before they are allowed to buy a washing machine.

.....a handy thing
> if you've ever sat in a remote spot and listened to digital signals that
> couldn't connect to you...telling yourself...."if they'd only just turn
> 'em on and off...I could get the message! After all...what is
> slower....a slow sent message or one that never arrives????

If no one on the other end understands code, it will never arrive.

Why don't advertisers make all their commercials on radio and TV in morse code so the message could reach more of an audience in bad conditions? Because MORE people would get the message EVEN IN BAD CONDITIONS if it is in voice, than in a secret code that they don't understand.

> There's likely lots of other good and bad reasons why anyone should keep
> morse alive.

There is only ONE. Because it is nostalgic and fun for many people. Don't take the fun away by forcing it on people that don't want to use it.

I bet if morse code was not a requirement (for certain classes of license) more people might take it up. No one wants to learn something that is forced opon them. People choose hobbies because they have an interest in them, not because someone hands them a fishing pole and orders them to fish!

> understood when his mic stopped working.

You people with your mic stopped working BS. Or stranded at the north pole with nothing for miles but a payphone with a broken microphone. Always have to try and make up some unrealistic situation to show how morse code could actually be usefull, and then THAT doesn't even fly!

I don't know of anyone ever going to be in the above situation, but even IF... would the operator on the phone or the police understand the code you are punching in on the touch tone pad, or would they think it is a prank call and hang up? Doesn't really matter, as this situation will never occur to either of us. They don't have payphones in the middle of the north pole. Especially with non-working microphones and working touch tone pads.

To that last end I can only
> offer that to those who WON'T use it...it will always be a thing
> despised....to those who do or have, a thing revered.

Think about what you just said! Think about WHY it would EVER be DESPISED! NO ONE would ever depise it if it wasn't shoved down anyones's throat!

People don't DESPISE model airplane kits. They might if people were
FORCED to build them in order to take up some other hobby!

To YOU and many others it is fun, to others it is boring and slow.

To some people restoring old cars is fun, to others it is boring and slow.

At least car restorer's don't want that hobby to be a requirement in order to enjoy some other hobby.

What if you wanted to play the flute, but a law required that you learn how to play the harp before you were allowed to play the flute?

What if you didn't like the harp and only wanted to play the flute, and other flute players called you lazy for not wanting to waste time learning an instrument you had no intention of ever playing?

Some people want to get into the hobby of radio to talk on the radio. They have no desire to use morse code. How silly it would be to waste the time to learn morse code, only to forget it once one has the license to go ahead and use voice.

Only people who intend to USE morse code should learn it.

Another receiver that seems to be in this same class is the Rockwell/Collins HF-2050. These are showing up F.S. on this NG, and are priced between the RF-590 and the HF-1000. Does anyone know how this unit compares to the Harris and W-J?

I thought the code requirement was for INCENTIVE purposes for a HOBBY that obviously needs to be regulated by the government so it won't turn into a fiasco like the mistake that happened with CB. You don't need to learn CW to be a ham and if all you want to do is rag chew on local 2 meters or other VHF/UHF freqs that's fine. They did away with CW in most military services because there are more effective ways to communicate reliably in war time. War is not a hobby (to most) and the military has a hard enough time teaching people with a 6th grade level education how to fire a million dollor rocket by "pushing the RED button" that they don't have time to spend teaching a HOBBY to 6th graders, most of who did not want the job to begin with! Ham radio is not a "way of life" it is a fun way to enjoy life. A code requirement provides incentive to upgrade. Our society (meaning the United States) over the last 10 years or so have become a bunch of whiners and get really irritated when told "no--you can't have it all right now!" If prospective hams spent as much time focussing on learning the code as they have whining about the requirement--there would be a lot more general class and higher I am sure. I don't like stop signs. Sometimes I like to drive fast. I think gas should be as free as water and I should not have to buy insurance and pay taxes. Learning the code shows you are somewhat dedicated to your hobby and perhaps worthy of increased frequency priviledges thereby allowing you to communicate with others who enjoy the hobby in other parts of the world. You are in effect an ambassador of the US! We could use more good ambassadors, that't for sure. Look at all the lids (former or current CB'ers) who took the time to learn the code then abuse it on 20 and 75. Perhaps the FFC is finally getting around to some long needed enforcement and are taking away the privilege. Just like driving--it is a privledge--not a right. So you don't need to learn much to ride a bike (scanners) but need more to drive a car (vhf/uhf no-code) but you need more road tests for cycle endorsements, big rigs, hazardous materials, flying an airplane, jets etc., pass 5 wpm you get some limited HF. Pass 13, you get to play with big rigs and big amps. Pass 20, you can do it all. I'd like to do it all and fly a jet but don't have the time to learn it all and get my 20 just yet! And I still shy away from the CB-like chatter on the ham bands, but still love to chat on 2 meters and give out my 1010# to all the KC***** call signs I hear on 10 meters. I always try to tune into a CW rag chew just to see how many characters I can copy at 20+wpm from the oldtimers who don't need to write anything down! A friend of mine has over the last year spent close to $50,000.00 on antennas including a 3 element rotatable full size yagi at 180 feet. 12 monoband antennas in all, and ALL are cut for the CW portions of the ham bands. CW is alive. Just because the military did away with it does not mean hams should also. After all, I want a college educated officer to get a VERY clear error free packet transmission before he tells the 6th grader to "push the RED button!" Kwitchyerbitchen and learn the code--or don't drive the big rigs!

Don or Darla Arnold wrote in message <3727AA1D.9F4B2D76@datasync.com>...
ALL the below are VERY CORRECT and TRUE, BUT,
is that ANY reason to use it on a TEST for getting your ticket
keep the subbands..if you want, EXPAND them if you like

IF we use this MODE to test people should we not have a test to see if you can talk correctly for phone, type correctly for packet,
and expand that by building your own computer for digital modes.
THAT'S ALL I AM AGAINST IS FOR A TEST
keepe the mode if it makes you happy but don't use it for TESTING.

Gord Skiffington wrote:

Howdy Dan....In all the hoopola about whether anyone should or can't use morse anymore.....a few points never seem to be brought out...or are only mentioned briefly.
Morse - Is a mode that allows communications to be copied verbatim easily (you can come close on voice or often do it if words are standardized but its not easy)......
- Is a mode that is indeed digital but which requires the most rudimentary interfacing and for which our own "processor" causes error correcting and speed compensating depending on the ability of the other "terminal" or "line" conditions.
- Is a mode which transcends language and dialect barriers when suitable signals are used...such as the international "Q" signals...and others. Hard to get most computer systems to do that yet and our ability to merely speak one language (english for example) with a wide variation of accents is hard enough sometimes.
- Is a mode whose "standardization" is unheard of in communications, where for at least a hundred years was not obsolete for the purpose of basic communications (stuff that's GOOD for critical use...such as lifesaving...and cheap commerce).
- Is a mode which, when the equipment is tired....just needs a good dinner and a cup o coffee to revive it.....stuff we have around anyway !
- When send using CW transmission (the 2 are NOT the same!) is extremely effective, using suitable narrow filters at both ends, for solid communications under the worst circuit noise and conditions. It might not be the very best...but when you consider the rudimentary equipment needed it becomes mighty attractive.
- Is a mode which, because it only requires very basic equipment, lends itself well to "field repairability".....a handy thing if you've ever sat in a remote spot and listened to digital signals that couldn't connect to you...telling yourself...."if they'd only just turn 'em on and off...I could get the message! After all...what is slower....a slow sent message or one that never arrives????

There's likely lots of other good and bad reasons why anyone should keep morse alive. Yep its old.....but well made and the fact that it hasn't undergone a million transformations tells us all that it works well. It is slow, but when mere text will suffice, is an adequate method of communication in conjuction with simple equipment. It does require skill to use...but everything we do also does (Tell me that a windows NT system hung up on a satellite link doesn't require skill to figure out what happened!). There is also a thing about operating morse that only morse operators may truely feel...but its a kindred spirit that transcends whether you were a mere ham or a skilled commercial operator, a struggling boy scout trying it or a pilot who was able to make himself understood when his mic stopped working. To that last end I can only offer that to those who WON'T use it...it will always be a thing despised....to those who do or have, a thing revered.

**** PRICE REDUCED ****
I have a virtually new FT-736R with both 6M and 1.2GHz modules installed.
Orignial owner, purchased about a year ago, one of the last. Absolute mint
condition and perfect operating condition -- used little. Also has FM CTCSS
module installed. To be sold only as complete unit as listed -- the ultimate
in VHF/UHF/satt radios. Serious buyers only please! Asking $1800 FIRM
(original
discounted retail more than $3000) and has both the owner and service
manuals. - dont want to sell, there will never be another VHF/UHF box like
the 736R but cannot keep the investment waiting for Phase 3D.
Expanding shack in other areas. Free 16 element 1.2 GHz yagi (commercial)
with
purchase!! ($100 original cost). Have original 736 box and packing for
shipment!!! --- SHIPMENT COST INCLUDED!!!
Contact Bob / N6MTU / email: magill@ix.netcom.com --- will call and discuss
with serious buyers.

2343. Announcing: Know Code International

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-29 00:00:00 UTC
From: ejune@intuitive-data.com
Message-ID: <09990329162624.OUI42.ejune@intuitive-data.com>
Source record: 144282

A few of us on the KnowCode side of the code testing debate have established a new organization called Know Code International (KCI). You can visit our web site at http://www.knowcode.org

The Know Code International goal is to present a reasoned and rational look at the code testing debate that rages in Amateur Radio. We'll begin by taking a critical look at No Code International (NCI) which champions the NoCode cause. By using their own articles and data, we'll show that this organization is not what it appears to be. We'll back up our conclusions with findings from a carefully planned and executed investigative process that is presented in an easy to follow narrative format.

We'll present several other articles which look at issues such as hurdles (barriers to entry), our basis and purpose as a radio service (e.g. advancing the radio art) and other topics. Our articles will rely on common sense and logic. We won't try to confuse you with wild statistical manipulations or "smoke and mirrors". We'll shoot straight, and in exchange we hope that you will give our point of view a fair consideration.

If you find the material on our site to be worthwhile, please sign up as a member and help us to spread the word. We're the other "no" code guys, but we spell our "no" as "know". Our easy to remember URL is http://www.KnowCode.org. Please tell your friends.

--
Regards,

Eric June, KU6J
Director of Know Code International
CodedOne@knowcode.org

For a reasoned and rational look at the code test debate, please visit our web site at http://www.knowcode.org

2344. FS: Motorola Radius M120 & Accessories

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-29 00:00:00 UTC
From: nospam@mindspring.com
Message-ID: <3728ecdd.175480395@news.mindspring.com>
Source record: 144283

For Sale:

* Motorola Radius M120 mobile VHF transciever (40 watt),
crystals for 151.625 and 151.950 itenerant frequencies

* Motorola Spectrum Series base loaded mag mount mobile
antenna, P/N 4010A, 136-174 Mhz, 3db gain, spring loaded

* Motorola power supply and cable (for base operation of mobile
unit) P/N HPN4001B

* Motorola base statio tray (to hold mobile unit in place for base
station use) P/N HLN5292-R

The above equipment was purchased by a non-profit organization
to communicate with hand held units at special events. It was used
three times for a total of aproximately 30 hours. Condition is
excellent, with all manuals and associated documentation. This
equipment cost over $600. Will consider offers in excess of $300.

Thanks,
Stan

> I'm a no-coder myself. But I don't whine like a
> baby because I don't have HF priviledges either. I haven't earned them, so why
> should I deserve them?

How ridiculous. What if it was VHF that required code and not HF? It
has nothing to do with EARNING, but silly laws.

What if we make it a requirement to learn Russian before one can drink
water? Will you not whine then also because you didn't EARN the right
to drink water?

When people don't whine or complain, they get get walked on by the
government. If I beat you, would you whine then? Or would you have to
EARN the right to whine?

So, tell me. How many subjects or material did you cover in
school that you felt were something you would never use and only forget?
You may consider learning the code a waste of time (yours) BUT, if it
is required to obtain the license you still need it, like it or not.
You may never parallel park a car in your lifetime (in 35 years of driving
I never have), soooo, should it be eliminated from the driving test?

Most of your frivilous analogies fail to hold any water.

Your right, I shouldn't have had to answer questions about RTTY, Packet, SSTV, VHF, UHF, Voice modes, modulation techniques, questions about 20m, 15m, 10m, questions about EME or any of these things since all I wanted to do was operate my homebrew 40m cw rig on 7040KHz.

Why was I subjected to this unessesary testing, I have no intentions of doing any of those things, It just wasn't fair that I had to answer questions on things I'm never going to use. Sheeesh....

Hi, I have two MTS-2000 radios that have slightly different Model #'s..
Therefore I can not clone the radios. I do, however, want to copy all
the information from one radio's codeplug to another.. Does anyone know
any easy way to do this without having to input all 160 modes again?
Thank You in advance for your help!!!

Marc

The treaty itself has provisions specifying exactly how certain sections
can be ignored. Japan has taken advantage of those provisions.

Great news guys I attend Cal State Univ Long Beach and at school they have a HAM radio club. I am probably the youngest in the club but I attended my first meeting with the group today and I had a great time. First I am around fellow hams that enjoy the same hobby that I enjoy and second I am now in touch with fellas who know a butt load about HAM radio. I am very excited about this. I appreciate all of your comments with advice and help. I am truly thankful to be involved in such a great hobby such as this. Yeah i know there are a few ding dongs out there but there attitudes will betray them. This is proven by a certain individual in this string of posts. But guys and gals it is no big deal.

Viva Amateur Radio.....73' to all and again I would like to thank you all, each and every one of you for your help. I am truly grateful.

sincerely, joseph merfalen

> School.

The specific context was a hoaxed emergency divert order, not ineffective communications. Airband transmitters are as common as airplanes at the airport. Anyone could have yelled divert, perhaps even with legitimate reason. The safest course of action was for the pilot to assume there was real emergency.

I agree secure communications would have made this incident more difficult. However, hacking it then would make it all the more meaningful.

Michael.

2370. Coded Ham VS. No Coded Ham

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-29 00:00:00 UTC
From: Scott Verity <sverity@hoflink.com>
Message-ID: <Pine.BSI.3.96.990429014632.10302B-100000@hoflink.com>
Source record: 144375

Over the last few days, I've read the messages entitled
"Code vs. No Code", "Abolish the no-code license", and other similar
sentiments between the various license classes of hams.

Recently, I passed my Technician level exam (This past Sunday).
I studied hard and I earned the privilege.
I intend to observe the responsibilities that a Tech license affords me.

Am I going to work my way toward upgrading? Yes.
Does the thought of decoding morse in my head intimidate me? Yes.
I believe it may prove difficult but, in the end, well worth the effort.

Would I want to see the no-code license abolished?
Of course I wouldn't ... but I also WOULDN'T want the tests simplified
just to make it easier. People tend to appreciate something more if they
have to EARN it.

The Tech lisc. affords me the ability to communicate with other licensed
hams. Additionally, I accepted the responsibility to operate according to
FCC law & accepted Ham Operating practices the second I signed the FCC
610 form.

Someone stated that a no-code lisc. ought to be called a beginner's lic.
That's exactly how I feel ... like a beginner.

I look upon the "Novice" lisc. holders as if they were the "Technicians"
and I were the Novice. They are, after all, more technically advanced than
I am ... and I am the one lacking experience in this field.

As for why I believe the FCC SHOULD keep the standards UP ...
One doesn't have to be lisc. to post on the net or to the usenet groups.
There are too many flame wars on the net and disgraceful cross-posting
to unrelated areas. Unregulated & unliscensed by the FCC, the amateur
radio bands would be a sewer.

Hopefully, I'll see some of you soon on the nets :)

Cross-posted to: alt.electronics.analog.vlsi,rec.radio.amateur.homebrew,rec.radio.amateur.misc

ke4zv@bellsouth.net (Gary Coffman) writes:

>Actually, NTSC is *not* a compression scheme. Resolution is limited by
>the bandwidth allocated for the signal, and by the scan rates chosen.
>Typically, horizontal resolution is about 225 lines, but because it is
>interlaced, the effective resolution is actually about 450 lines.

No, that's not correct. The ratio between the bandwidth and the
horizontal sweep gives the number of cycles that can be resolved
horizontally. Interlace has nothing to do with horizontal resolution.
The ratio between the 4.2 Mhz broadcast bandwidth and the 15734 Hz
horizontal sweep is about 267. However, about 15% of the horizontal
period is non-picture information, so you'd expect to be able to
resolve about 225 cycles per picture width. Now, TV resolution is
measured in "lines", not "line pairs" like photography, and you can
resolve 2 "lines" in one cycle (the Nyquist limit popping up again).
So you'd expect to be able to resolve an absolute maximum of about 450
(vertical) lines across the width of a broadcast TV image.

However, TV horizontal resolution is quoted in "lines per picture height"
(to make it comparable to vertical resolution), not lines per picture
width, so you have to multiply by the 3/4 aspect ratio to get the
official figure. As a result, broadcast television is limited to a
horizontal resolution of about 340 lines per picture height.

VHS is worse, about 250. SVHS is better, and analog videodisc is
better yet - about 550 lines.

>Vertically the resolution is limited by the scan rate to 262.5 lines
>per field, doubled to 525 lines by interlace. (Because of the way the
>lines of a test chart fall on the interlace, the vertical resolution is
>actually only 262 lines, IE to resolve a line requires a transition,
>and that requires two vertical scan lines to reproduce.)

Again, not quite. The number of active lines per field is somewhere
around 240-243 - the rest are used up by non-image information. Due
to interlace, the lines from even fields are drawn between the lines
from odd fields, so a properly operating TV (with no overscan) will
show about 480-486 actual scan lines.

According to the Nyquist limit, this many scan lines allows you to
display about 240 cycles or 240 line pairs or 480 lines per picture
height. But if you tried to approach this, you'd find that either the
pattern would go grey, or it would flicker madly since all the white
lines are in one field and all the black lines are in another field -

either way it's not pleasant.

Because of interlace, and because the scanlines overlap somewhat, the actual useful vertical resolution is about 70% of the theoretical limit - about 335-340 lines per picture height. (This 70% factor is called the "Kell factor" in video literature). Note that for broadcast television, the horizontal and vertical resolution is about the same - this is not an accident.

>If this doesn't quite make sense, picture a test chart with vertical
>and horizontal lines drawn on it. The vertical lines are resolved by
>the horizontal bandwidth of the TV, and the horizontal lines are
>resolution limited by the number of scan lines in a field. So NTSC
>should yield a resolution of about 450x262. It usually doesn't quite do
>that well horizontally because most receivers aren't adjusted to
>recover the full transmission bandwidth. 320x200 is closer to what you
>see on the typical home receiver with an off the air picture.

Well, a *good* NTSC monitor should be able to display about 340 lines (counting both black and white ones) vertically and about 440 lines horizontally. Typical TVs may well be less.

>But that's not nearly as bad as it may sound to computer types used to
>talking in terms of pixels. NTSC is analog, a transition can occur
>*anywhere* on the screen. Transitions aren't limited to discrete
>locations as they are in computer displays. This yields an *apparent*

>computer display. For example, there are no jaggies on slanted lines
>with NTSC, but there are with computer generated graphics. This analog
>nature also shows up benefically for objects in motion. The movements
>are all smooth.

It's not that simple. NTSC is analog horizontally only - it's just as discrete as any frame buffer vertically. You don't see discrete locations vertically in video because the signal is adequately low-pass filtered during sampling. But that can be done equally well in computer-generated images - and often is in high-quality pictorial images. This low-pass filtering is not usually applied to window edges or to text on computer displays, because the apparent sharpness of the unfiltered version is preferred.

Jaggies are also caused by a failure to low-pass filter the image before sampling - they are aliasing artifacts in the spatial domain (instead of time). They can be reduced or eliminated by "anti-aliasing" techniques, which are just low-pass filtering. Well-filtered computer-generated images do *not* show jaggies.

The appearance of smooth motion in video is because of the 60 Hz sampling rate in time, combined with motion blur. Both of these are possible, if not yet common, in computer-generated imagery.

>Hue is also analog, and can vary in infinitesimal steps. You aren't
>limited to a preset number of colors as you are with a computer

>display. This turns out to be very important because the human visual
>system is more sensitive to differences in hue than it is to
>differences in spatial resolution. That's why TV pictures look lifelike
>while higher resolution computer displays still look like a cartoon.

Uh, have you looked at any good computer displays lately? Say, with
24 bits or more per pixel? Displays with only 8 or 16 bits per pixel
have to quantize the colour to a small set of available hue/saturation/
intensity values, and this creates areas of solid colour with "jumps"
between areas. With 24-bit colour (or more), the steps between adjacent
representable colours are so small that you can't see them, and the
appearance is indistinguishable from continuous colour.

In fact, most video broadcast these days is *also* quantized to 24 bits
since that's all the digital video recorders record. There are fewer
possible colours than in computer graphics, because video uses up some
of the 256 values for sync and blanking, and fewer are left for actual
image information.

>The *apparent* resolution of NTSC is a close match for 16mm film (that
>was chosen deliberately when the standard was formulated).

Well, for 16 mm film 50 years ago. These days, good fine-grain 16 mm
film has far more resolution than NTSC, and in fact is a pretty good
match for HDTV. (It also depends on whether you're talking about
negative resolution or on-screen projected resolution - see below).

>Of course, from the way the poster you're answering spells color as
>colour, we can assume he's in a PAL country. The bandwidths and scan
>rates are slightly different for PAL than for NTSC, with the advantage
>going to PAL. So he should see somewhat better resolution than we
>would.

Not necessarily. I spell colour the conventional (British) way, yet
I watch NTSC television identical to what the USA sees.

>To approach the apparent resolution of NTSC requires a computer display
>running 800x600 with 16 million colors. It will still have visible
>artifacts that will identify it as pixelated compared to an analog TV
>signal with moving pictures, but it will be close to the same visually
>if you sit back from it the standard 9 feet used for TV viewing.

No, a 640x48 display is sharper than NTSC, because its limiting resolution
really is 640x480 lines, not 440x340. And it can do that for all three
colours, not just luminance. The chrominance resolution of NTSC, as
decoded by most TVs, is about 50 lines across the picture width - one
eight the resolution of luminance (because the bandwidth is only 0.5 Mhz).

In addition, if the image being displayed is properly filtered, you
will not be able to see individual pixels or scanlines, nor more
motion artifacts than NTSC.

For a demonstration of this, take the highest quality digital *picture*
you can find, preferably from a Photo-CD or a good film scanner.
Reduce it to 640x480 using something like Photoshop. Then record the
same image in NTSC, using the highest-quality video output system you
can get your hands on. Compare it to the 640x480 image on a computer
monitor. The NTSC version is just not as sharp, though it's often
surprisingly good for most natural scenes.

>The end result is that HDTV at 1080i has about twice the apparent
>resolution of NTSC. It looks really good, about equal to 35mm movie
>film (again that was a deliberate choice).

It depends on how you measure 35mm resolution. HDTV is comparable to
or better than a 35mm print shown on a standard 35mm projector, at least
in resolution. But a 35mm negative scanned on a good scanner has at least
twice the resolution as HDTV. The difference between negative and
projected release print is partly due to the multiple generations in
between, but mostly due to poor stability in the projectors.

So HDTV is equivalent to 35mm film for projection, but not equivalent
for original image capture. It depends on what you're talking about
using them for.

Very well said, Monty! Your post marks you as a gentleman and a
scholar. It is very difficult to convey to the no-code types what an
aesthetic experience proficiency in morse provides, but even this
long-time CW op has come to realize that using the code test as a
barrier to amateur radio is unproductive. To the others: Welcome to
ham radio -- be tolerant, and 73.

I am working on a HTX-100 that has no output on sideband. CW works fine. I believe the problem is with IC-3 but not sure.

Also working on a RCI-2950 that transmits but does not receive on sideband. The receiver goes totally silent when either USB or LSB is selected. Anyone had any experience with this problem?

If you do not think Morse code has at least some of the aspects of a language, then you are either not proficient, or just nit-picking, or both! Almost anybody who has attained real proficiency in Morse (>25 wpm) is well-acquainted with my claim; anyone who has not cannot be expected to believe this! I mean this as a simple statement of my experience and that of others I know.

Only one reason? Awww - come on. Lots of reasons. But one of the
best reasons for CW (at least for me) is the ability to build low cost
equipment for that mode. I've built a 40M CW kit (and repaired it
after having it on the air for a bit) and more recently a 15M CW
transmitter using a high-speed octal buffer as both amplifier and
crystal ocilator. I can build a 1/2 watt transmitter and send a
singal across the country - amazing. I doubt I could do the same work
using the Phone mode.

Still, I agree you don't need to learn Morse Code to push a button
(PTT). I would like to see the voice portions of the HF bands opened
for those who pass up to and including the general theory test. It
would at least calm the whining of some. But of course keep the
CW/Data portions of the band for those of us who like to work and
experiment with homebrew equipment in those modes (and for those who
simply like the code). Also (as a QRPer) those who enjoy the hunt
with low power tend to get a lot of bang for their buck on CW.

Oh yes, and it is fun.

>I bet if morse code was not a requirement (for certain classes of
>license) more people might take it up. No one wants to learn something
>that is forced opon them. People choose hobbies because they have an

It's not a requirement anymore here in the US (I thought it wasn't a
requirement in much of the rest of the world as well for entry level
licence). No-Code tech is a great entry licence but I'm not sure how
much it is helping the radio op numbers?!? It may have helped when
first introduced but it seems like things are slowing down again -
just my opinion of course ;)

Anyway, CW is a great mode and Morse Code is a fun language - for me
anyway. You can argue about it forever but many of us who use it like
it. Of course, I'm rather fond of using my homebuilt abacus rather
than a calculator - not very efficient (at least in my hands anyway)
and reasonably outdated but still fun and there is something about the
acquired skill which is satisfying.

OH MY GOD!!!!You have to look thru THREE PAGES????How does anyone
> survive such tremendous effort and personal sacrifice????

No, certainly no great sacrifice nor great effort, but then again a
multimillion dollar company, i.e. ICOM, could write better instructions.
Perhaps you wrote the manual???

Pay attention DUMMY, the point was that you can pass a written test in
any field and it doesn't prepare you for the real world. I wonder how
many of you stumbled on your first or second QSO despite being able to
recite Ohm's law.

Thank you for the sarcastic comments and lack of help for someone who
had legitimate concerns.

On Ebay: Click here for more info -->
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=97558259

T-195 Military Transmitters, Package of 2
Designed by Collins Radio, the T-195 is often found paired with the R392 receiver. An exceptionally heavy-duty transmitter, the T-195 is both waterproof and shockproof. By using two car batteries in series, the transmitter is perfect for vehicle use, or as a field day transmitter.

This package includes 2 of these transmitters. Both are in very good condition. As per most "de-milled" equipment, the meters have been removed. They have been replaced in one of the units. One unit makes full RF output; the other seems to have a problem with the Auto-Tune mech. I understand from Electric Radio that often these problems are a result of poor connections on the modules.

This heavy-duty transmitter covers 1.5-20MHz continuous. RF Power output is a solid 80-100W with nice sounding plate modulated AM. Emission modes are AM and CW.

Frequency coverage is in 4 bands using a Collins PTO. The unit features antenna Auto-Tuning, with two choices of antenna connections depending on feedpoint impedance.

Final tube uses a 4X150D, and 2-4X150D are used as modulators.

Dimensions are 11.5h X 22w X 14.25d. Weight is 135 lbs. Power requirement is 28VDC 42amps.

Due to the weight, the buyer must pick up in the Buffalo, NY area, or arrange pickup, crating and shipping at his/her cost.

Payment must be received in Postal Money Order, or Bank Check prior to shipping.

As always if you have any questions just email.

Tnx

73,

Bruce KG2IC

>> w5yrz@worldnet.att.net
>>
Stan you will find 12-25 watts plenty on 10 meter
i have been on 10 for 15 years and when the band is open
youll need very little power.
i have never run more than a few watts and have made contacts all
over the world,i find it more exciting to tell the other operator
that you are only running in QRPP mode and listen to his response
most of the time the other operator will drop to QRPP mode as well
and we can still communicate with no problem.
i use a fiberglass verticle for the base ant. and a converted cb moble ant.
in the car with a uniden 2510 with no amp.
so dont let the low power rigs frighten you away you will still
enjoy one of the best bands.

Ken:
I would suggest that you at least consider a Harris RF-590, RF-590A, or the military version
R-2368. The Navy is in the process of converting the entire fleet to the R-2368. Check www.mindspring.com/~longwave/msg0997.htm and note the article by John Reed. He traded a Watkins
Johnson HF-1000 for a Harris RF-590 and an RF-550. He thinks the RF-590 is a better radio. You
can buy an RF-590 for less that what you see in QST and possibly slightly less than an HF-1000.
The Racal should be one-half to one-third the cost of the HF-1000 or an RF-590.

ke4zv@bellsouth.net (Gary Coffman)
shared these priceless pearls of wisdom:

->However, there is a technical solution to the ATC problem.
->We could replace the AM radios with cryptographically
->secure spread spectrum radios. Then it would be virtually
->impossible to effectively jam or spoof them. The technology
->to do this has been available for over two decades, and has
->become a consumer item in this decade. But people would
->rather pass a feel good law than to implement a real solution.

Gary --

Technically you are absolutely correct, and "some day" what you propose will come to pass. However, I think you are very aware of the political issues involved, which rarely lend themselves to decent solutions. The prime political problem is how to have everybody, everywhere switch to the new system at the same stroke of the clock. This isn't one of those "phase it in at different locations slowly" tricks. The airplane at JFK this morning will be in Paris late this afternoon. If you don't change the whole world at once, you wind up causing more trouble than you cure. And, there are some third world countries that are still using WWII surplus stuff as their front line ATC comm equipment.

One answer is to take the soon-obsolete 108-118 NAV band and create a whole new subset of COM frequencies in that band as a transition method. Continue to use the current 118-137 COM band, AM mode for ten or twenty years, but with a phase-in to the new system. Put the new system on 10 kHz. spacing and you will have easily as many channels as you have now. Simulcast your transmissions on both systems for ten or twenty years to give the world a chance to catch up and there you have it.

Of course, that would require a HELL of a lot of good sense in the Puzzle Palace on the Potomac and I don't see that sort of bright bulbism at this time.

>
>William Lee

Nonsense. Morse is an encoding of the Roman alphabet. It has no words, grammar, or syntax to call its own. The words of some actual language (usually English) may be spelled out using the Morse alphabetic encoding, just as they might be spelled out using ASCII encoding or Baudot encoding, but the words remain words of the language from which they come. These words may be combined according to the syntax and gramatical rules of the language of which they are a part to form sentences, but the sentences remain sentences of the actual language, not sentences of some mythical Morse "language". What I'm sending here is text in the English language which just happens to be spelled using an ASCII encoding of the alphabet. Were I to send the text using Morse encodings of the alphabet, it would still be English language text.

Hello,
I got make something big...
I had neede for some small antenna and
i am tryed to make one without calculating...
And here is what i got...
some small HF loop antenna that works fine on 120, 90, 75, 60, 49, 41,
31, 25, 19, 16 meters bands
It works beter than some dipole for 16 meter band i mean that works
beter on that frequency
ok
Look for a gif file in your attachments and E-Mail me if that antenna it
works good with you!
"I got it like the best and smallest antenna for my last 1.6 years.
I am completely recomend that antenna if you live in the sity and dont
have some place to make
something beter!!! "I am not saying that antenna is BAd!"

Enjoy!

And please if dicided to make that antenna please tell me about how it
work's with you!

Look for some gif file in the attachments!

Thanx!

While Morse is a CODE that can express a LANGUAGE, it transcends
ASCII characters and many other encoding methods because it has rhythm,
tone, style, and can be expressed uniquely, yet be commonly decoded
and understood. Degrees of appreciation vary from simple RR to
near opera like emotional involvement and appreciations. Perhaps
the links to music are where the bridge to a LANGUAGE like description
occur.

Morse also seems to use a special area of a person's mind that many
find stimulating in an unusual way. If you use Morse regularly, you
may find that you do other unrelated things and sense the stimulated
by Morse part of your mind participating.

Well,
I LIVE IN THE U.S. and I DO CARE!!!!!

Further regulation of the scanners and other radio equipment here can cause even those with the legal privileges of licensing some big problems....

Besides, unless they start encrypting the data, I figure that any radio signals easily demodulated are public domain.

>

Hmmm..An HT that repels insects....Hmmm...BUT will they make one that kills dandelions and poison ivy? AND What will happen when the surviving bugs evolve to be tone deaf? There are already lots of bugs who can't carry a tune. BTW seriously what frequency(s) are the bug tones? Although above the range of human hearing, those tones might call dogs that bite worse than the mosquitos. Do you know that some bugs can emit tones to attract mates by rubbing their feet? People who omit smells by rubbing their feet, on the other hand, can repel people. You can try this on Field Day if your HT gets blocked by another HT that is within too close a range. It works even without an Alinco HT! PLEASE keep thinking, Hams need more classes...perhaps maybe Exterminator class? I never met a ham I didn't like, Bob Wex w2ilp (Insects Love Picnics) -- .- -..- .. --
---

Big fleas have little fleas on their backs to bite 'em,
And little fleas have littler fleas and so on ad infanitum!
--?--

There they go using Hams as guinea pigs. If the mosquito chasing tones are a success for Hams, they will add them to laptop computers for sure and the Hams won't get any royalties.
--w2ilp--

I do not wish to WAIT to get my General privileges so I'm continuing to
work on my code. It could be another year or more before any restructuring
takes place. Why wait? Will I USE code? Probably not, it doesn't interest me.
But to get my General I HAVE to pass the 13. I passed the General written this
pass Sunday but failed the 13, my practicing continues...

>The main point of my post was to get the notion out there that the point of
>ham radio is to COMMUNICATE, not exclude people based on their ability to
>master irrelevant trivia.

It's not up to you, Joe, to determine what's necessary and what's not
in regards to the requirements. The purpose of the Amateur Radio
Service is clearly spelled out in our charter:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur
radio service having a fundamental purpose as expressed in the following
principles:
(a) Recognition and enhancement of the value of the amateur service to the
public as a voluntary noncommercial communication service, particularly with
respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to contribute
to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules which
provide for advancing skills in both the communications and technical phases
of the art.
(d) Expansion of the existing reservoir within the amateur radio service of
trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance
international goodwill.

That ain't Chinese take-out, where you get to pick and choose those
principles above which you like, and disregard those you don't. Being

communicators is only one of several aspects of the Service that the FCC desires we participate in.

(One wonders how a Tech satisfies 91.1(e)...)

73, Joe.

Why is it even called TOP BAND ? There are much lower bands today that are a CHALLENGE, like 136 and 170 kHz. A KW is no CHALLENGE. Guess these toadies still say "the wok bands" when they mean 17 meters. Oh, that's right, then these old guys would need to spend money on a new rig, this way they're safe by declaring what is no longer the top, the top......

I was very shocked and sad to hear of the passing of my friend Peter.
We first worked on 160 about 25 years ago. I had the honor of meeting Peter and and his family when he visited me in the late 1970's. Over the years we had many enjoyable QSO's on Top Band.

Peter was a very friendly and kind gentleman! He had a true love for 160 and it's many challenges! Through his good deeds, he did much to promote Top Band over the years to the level we enjoy today!

I will miss you Dear Friend, Peter

<Did you cry, phoney ? God sakes how many times will these dorks post the same euology ?? What a friend, you met him in person ONCE 25 years ago. Why not more often if you liked him so much ? Need to go meet other "friends" for their one time, so you were busy ?>

FOR IMMEDIATE RELEASE
April 28, 1999
Report No. 99-16
COMPLIANCE AND INFORMATION ACTION -- FCC ANNOUNCES IMPROVED PROCEDURES FOR COMPLAINTS ABOUT AMATEUR RADIO
The FCC today announced that it has adopted new, improved procedures for persons to use the internet to file amateur radio service complaints with the FCC. Effective immediately, amateur radio service complaints should be sent by electronic mail to the following internet address:
fccham@fcc.gov
Alternatively, complaints can also be mailed to:
Compliance & Information Bureau
ATTN: Amateur Radio Complaints
1270 Fairfield Road
Gettysburg, Pennsylvania 17325
At the same time, the FCC said that effective immediately, it is discontinuing the telephone number designated for amateur radio complaints, 202-418-1184, and will rely exclusively on the internet system, with the mail back-up. Complaints that have already been made by telephone prior to this notice will be acted upon, and persons who have left messages on the Amateur Complaint line number will receive return calls by Commission staff. However, in the future, that number will not be available for complaints.

Hi ,Dan!

Well, in just a few short days, you've managed to create quite a stir
with your question (wink) ... 19 replies so far, and I bet it ain't
over yet. I've noticed in the past, that nothing gets things stirred
up quite so much as code and licensing issues. Anyway, well done!

I'd like to make an observation about human nature. [Now, please
understand, I'm not talking about you. Heck, you asked a question,
and you seem to be the best example of an open mind I've seen in this
thread so far.] Anyway, I've noticed that when my mind is made up
ahead of time, it tends to adopt as its purpose to support that
decision in any and every way it can. And once that purpose is
established, it will endeavor to interpret everything I hear and see
as evidence I am "right". It doesn't make me right, mind you, but
it's a mighty temptation to judge everything and everybody as either
threatening or supportive, with no gray area between.

So whenever I encounter myself feeling defensive (or offensive) about
a subject, I suspect I've pre-determined how I want things to be, or
how I want things to come out. And that's a warning signal to me that
my mind is pretty much closed. For me, the warning flags went up when
I though somebody might threaten my beloved CW.

But on re-examination, I think both "sides" can find common ground.
We don't necessarily need code proficiency tests for everyone to prove
they can do it ahead of time. Nobody's going to get on the air
sending morse when they only know 12 letters of the alphabet. So,
maybe just a sampling of questions on the written tests, concerning
the use of the mode, would be in order - to show an understanding of
the mode and its operating procedures, for those who have the
potential for using CW. Same would apply to voice, digital modes,
repeaters, satellites, anything that has significant usage on the ham
bands.

After that, it's up to us avid CW fans to promote and expose the positive and rewarding aspects of the mode (and there are many). We haven't done a good job of that thus far, maybe as a result of being so defensive.

As for actually learning CW, when I think about it (at least for me), the fastest part of the learning curve was when I was practicing it "on-the-air", without the pressure of "having to pass a test". It also happened to be the time that I really learned to love it.

Come on, folks - both pro and con - let's look for new viewpoints, consider them with an open mind, and see if we can't make the amateur service even more fun and more friendly than it already is.

73,
monty N5FC

> To agree, as ILP seems to do, that it is a good thing for the
> government to have a monopoly on effective deadly force, one must be
> assuming that the government is 1) overwhelmingly benevolent, and 2)
> likely to remain so forever.

Nah.. The government can never have a monopoly...because, as Cecil says, I still have butcher knives. Besides my idea for mandatory gun insurance would take a lot of the enforcement of gun control out of the government's hands and place it in the hands of competetive private insurance companies. AND any government that has command of an Army to defend itself will always be potentially more deadly than all civilian citizens even if the civilians have guns, because civilians will never have as many tanks and war planes. The more modern a nation becomes the harder it becomes to rebel against it and take over by force.

> In my view, neither assumption is warranted by the facts.

Nor are your assumptions warrented by anything but paranoia IMHO. No offense taken...but I myself would rather trust the government of the USA than a lunatic with a gun. I would risk the concept of calling 911 and expecting to get help from a benevolent policeman. Noone can live forever so I can't worry about any governments of the future being any less benevolent to law abiding citizens. I am optimistic that future governments will be more benevolent than present ones anyway. That is because our present government is IMHO more benovelent than some of our past governments.

I dunno for sure what the best solution would be but the facts are that there are more gun related killings and accidents in the USA than in all other industrial nations combined.

Joe wrote in message <3728d9fc.941099@news.mindspring.com>...

>And how do you determine whether or not I see all I want to see?

Easy. I would imagine that you, like most people, would wish to know the whole truth. However, if you are seeing only what is presented on the news, then you are seeing only a small, carefully manipulated piece of the issue.

>I believe that is MY decision to make.Who appointed you as 'Governor'
>over what amount of anything someone should see?

I never attempted that role. If that is how you interpreted my comments, I would suggest your reaction is most likely a result of your personal defense mechanisms. My comment was simply pointing out that by relying on the news for all your information, you were not receiving the whole story regarding the issue.

(Therefore, your opinion on the issue would have to be greatly discounted due to your lack of access to all of the facts necessary to form a valid opinion.)

>You either mis-read my original post or are a damned fool...which is it?

I guess I must be a "damned fool" for thinking you might wish to enlighten yourself to the whole truth of the matter, rather than limit yourself to the mis-information presented by the media... I apologize for my mistake.

Sorry...I just did it.
I took a car battery and hooked the +lead to the antenna.....
I then held the antenna in one hand and my code chart in the other....
My sister DID hear my screams and smelled my burning tounge...
She called my mom....
Mom called the police.

The doctor says I will be able to speak in about a month.

But seee...It worked...I got help.

You might want to check with different VE teams in your area. It
seems that most W5YI teams use the actual Morse Code on their
exams while ARRL teams use the Farnsworth Code. Sounds like
you got one of the latter. One of my co-workers ran into this problem
too. He was flawless at 5 WPM Morse Code copy during practice
sessions, but when he sat the exam they were using Farnsworth Code
and he couldn't copy that at all. He was very upset by that, and was
considering giving up. I pointed him to a VE group which uses the
actual Morse Code and he passed with a perfect score.

If we're going to have a Morse Code test, we should actually use
Morse Code and not some bastard code with different parameters.
(Morse is a timing code with five symbols, alter the timing ratios
of some of the symbols and you have a different code.)

Yep, it *is* a phase it in at different locations situation. With SS, a separate band isn't necessary, however. The two sorts can overlay each other. I'd also suggest that for *commerical* airlines and major airports, the speed with which things could be changed could be much more rapid. It wouldn't require that Pedro flying a DC-3 out of some grass strip buy a new radio right away, but the airlines flying in and out of major airports can afford to buy new radios capable of both sorts of modulation (a similiar situation to cellphones where digital phones have to be able to fall back to analog because not all areas support digital yet). Those who don't have secure radios would be restricted from flying into airspace that requires them. That's no different than restricting aircraft without encoding transponders from flying into air space requiring one.

160m. I think it got its name from the old radios where the freq. was inscribed in the top band of numbers. I could be wrong; this is the fiction I made up for myself to explain why the bottom would be called the top.

Michael.

I guess you don't plan to partake in the fun of this "stupid little
hobby" then. Either shut up or learn to SEND (and receive).

User fees. Ever hear of toll roads and private schools? Pay for
what you use, and don't expect a subsidy from those who don't.
There are a few things which don't fit the user fee model, defense
for example, but most things government has usurped can be
done on the fee for service model.

I don't think the latter statement is accurate. Hadn't most of the
killing already occurred by the time SWAT arrived? In general,
by the time the police arrive, the damage has already been done.
That's why you can't depend on the police to protect you. Their
job is to clean up afterward.

You need to be able to defend yourself at the moment of attack.
What the police do later is of little consequence if you're already
a victim. They can draw a chalk outline of your body, but that's
little comfort to you. It's better if it is the attacker's body that
they're drawing the chalk outline around. It is unpleasant to look
down at the body of someone whose life you have taken, but it
is infinitely better than the alternative.

Are you really that dumb Dave? Do you really think that your
stupid code requirement is going to last more than a few more years?
Wake up and smell the coffee (or tea if you prefer).

Or is it that you think dispite the fact according to hams
themselves 73% percent of them choose to say that CW is rarely or
never used by them, that CW is the Be all and end all of fun in Ham
radio? If you really think so, then I suspect you demented. I ahve a
good time without Morse Code in ham radio. yeah I'd have an even
better time if the dumber requirements in the ARS were consigend to
the ash heap of history, but I and others are working on that

HAMFEST/COMPUTERFEST CALENDAR 1999 - NORTHERN ILLINOIS
last updated April 28, 1999 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

MAY 1999

May 1 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, Info: Joe Holly, AA9HR, 1702 Holly Ln., Grafton, WI 53024, 414-377-2137

May 2 (Sun), Sandwich, IL - Kishwaukee Amateur Radio Club Hamfest, Sandwich Fairgrounds. Admission $?. Ends at 2 PM. Talk-in 146.73 MHz. Info: Bob Yurs W9ICU, phone 815-895-3219, email: w9icu@tbcnet.com. (Nice mid-sized hamfest out in country. Lots of tailgating. Few commercial exhibitors. Always a good time. Fairly good restroom facilities - AJ9S).

May 14, 15, 16 (Fri - Sun) - Dayton, OH. Dayton HamVention. See http://www.hamvention.org

May 15 (Sat), Wheaton, IL - Giant Computer show (see below). | Dupage County Fairgrounds. |

May 16 (Sun), Orland Park, IL Giant Computer Show & Sale | (see below). orland Park Civic Center. |

JUNE 1999

Jun 6 (Sun), Princeton, IL - Starved Rock RC. info: Frank Carraro, KF9NZ, PO Box 198, Leonore, IL 61332/ 815-856-3773. http://www.qsl.net/w9mks/ E-mail: w9mks@qsl.net. (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 13 (Sun), Wheaton, IL - Dupage County Fairgrounds. Six Meter Club of Chicago. Gates open 7 AM, buildings 8 AM. | Tickets $6 at the gate. No booze. Recorded InfoLine: 312- | 442-4961. VE testing 9 - 11 AM only. Call InfoLine to | preregister for testing. info: Joseph Gutwein, WA9RIJ, 7109

Blackburn Ave., Downers Grove, IL 60516-3925. tel. 630- | 963-4922.

Jun 13 (Sun), Orland Park, IL Giant Computer Show & Sale | (see below). orland Park Civic Center.

JULY 1999

Jul 11 (Sun), Peotone, IL. Kankakee Area Radio Society. Will County fairgrounds. Admission $5 at the gate. Take I-57 to Peotone Exit 327 (east). 146.94 MHz (-600) talk-in. info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. tel. 815-939-7548, E-mail: k9nr@juno.com. http://www.geocities.com/capecanaveral/hangar/5711 For Reserved Tables and Advanced Tickets, send check (payable to KARS) and S.A.S.E. to: CHIP MOORE, K9IOC, 289 S. Euclid Ave. Bradley, IL 60915, E-Mail: chipm@megsinet.net or to BILL DESALVO, W9OQW, 403 Birch Dr., Shorewood, IL 60431. 815-744-5099.

Jul 18 (Sun), Sugar Grove, IL. Fox River Radio League. Waubonsee Community College. For tables, tickets, and information: contact N9UZC James E. Von Olnhausen, n9uzc@amsat.org, (630)-879-3042, FRRL, Box 673, Batavia, IL 60510-0673. http://www.frrl.org/hamfest.html (good, small to midsized hamfest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 1999

Aug 7 (Sat) - Quincy, IL. Western Illinois Amateur Radio Club Ham Radio and Computer SWAPFEST 1999. 8:00AM to 2:00PM. The Eagles Alps Grounds (3737 North 5th Street) 4.5 miles north of downtown Quincy with easy access from US Highway 24. Admission $3.00 at the Gate ($2.50 in advance) per person, under 12 - Free. ARRL VEC testing for all license classes at 12:30PM. Indoor Flea Market space available for $5.00 which includes one 5' table. Outdoor tailgating space - Free. Talk-in on 147.63/147.03 MHz. Plenty of convenient parking available. Lunch will be served on the grounds. Children's playground area. For additional information contact N9JF, jfunk@adams.net

Aug 8 (Sun), Peotone, IL - Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. E-mail: nf9n@aol.com. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 14 (Sat), Wheaton, IL - Giant Computer show (see below). | Dupage County Fairgrounds. |

Aug 29 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. Talk-in: 146.52 Simplex. info:

Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/. Tickets: Advance With Double Stub $4.00 - At Gate $5.00 Single Stub - $6.00 With Double Stub . Exhibit Building: 8:00 A.M. - 3:00 P.M. Table Rental: $14.00 For 8' Table. Flea Market: 6:00 A.M. - 3:00 P.M. No Additional Charge For Flea Market Space Info (708) 944-0500. Fax (847) 658-1678. (fairly good, small to mid sized ham-fest - AJ9S).

SEPTEMBER 1999

Sept 25, 26 (Sat & Sun), Grayslake, IL Chicago FM Club. Lake County fairgrounds. info: Mike Brost, WA9FTS, 5127 North Monterey Ave., Norridge, IL 60656-3245. tel. 708-457-0966 (the biggest and best hamfest in northern IL - AJ9S)

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Are you saying EVERY minute of EVERY day you are busy learning/doing
something that is of the utmost importance to your future?You dont
watch TV?Do you have any hobbies?How much time do you spend on the
internet trying,in vain,to justify your incorrect feelings about the
CW requirements? CW is part of it and if you have a problem with
that,learn to play another musical instrument and leave the ARS to
those who choose to follow the rules.I dont agree with all the rules
but I do follow them.Why? Because they ARE THE RULES!!!

You bet! That and seeing the lids that make a slight advancement
and then sit on their ass being 'experts' without knowing what the hell
is going on. Extras (and one a 'tech rep') who are surprised when they
learn that an alkaline battery last longer than a nicad. Or who tell
people to 'cut the lock line' in a PLL circuit.

Don't judge me because I don't spout CW. I used to like it. In fact,
I still do, but I don't operate CW anymore, and the skills have long
been lost. I still have my old Swan downstairs. It has NEVER seen
a mic in it. In fact, it has NEVER seen anything but a straight key.
Period. In the entire time I've owned it since 1981. (I even have
a mobile chopper for it.) One of these days I'll get that fire back
to operate CW again. But I'll do it because I WANT to, not because
I have to.

Mike

Why can't you get it through your head the difference between
forced to learn and tested on knowledge and being forced
to learn a skill.

Opps, sorry, do you think the skill is more important than the
knowledge?

If everyone practiced for the Morse exam by actually listening to on-the-air QSOs, then this Farnsworth issue would never come up, and they would be much better prepared. While you may define Morse any way you wish, you'll hear literally hundreds of different timings on the air, some of them hard to copy at any speed. Personally, I think this is a better approach than listening to the same piece of software drone on endlessly with exactly the same timings everytime.

Way to go Joe! Learn all about ham radio in a couple months
reading RRAP. You must be about ready to take your No Code
tech exam.
Don't forget to memorize the word associations so you can
recognize the answers to the test questions. Fortunately
learning is not necessary.

That and seeing the lids that make a slight advancement
> and then sit on their ass being 'experts' without knowing what the hell

Yeah, man! Ask me how to "open up" the ham rig you just
bought so you can put it on CB/Freebie...I'll tell you to
'cut the lock line', too.

It's called 'feeding misinformation to the enema'.

Oh, I'll bet! Never had a model 80 VFO attached either,
right? Doesn't even have the name Siltronics on the panel
either, does it???

In fact, it has NEVER seen anything but a straight key.
> Period. In the entire time I've owned it since 1981. (I even have

A "mobile chopper", huh? Tell us, whats the purpose of that
thingy, huh? Would you happen to know the REAL term for it,
note just the CB/Freebie term?

You are hereby exposed as just one more CB/Freebander troll
cruising RRAP. Every indication shows it clearly, to anyone
who has been paying attention.

Don't bother playing again.

> I'm about to buy one of these high end receivers and
> don't want to make a mistake.

I'm listening to an RA-6790/GM as I type. However, if you have the money to by the W-J, do so, if you don't invest in an Drake R-8B.

There are some serious problems with exotic commercial receivers for people who are not extremely technically qualified or not made of money. Many of these designs are 20+ years old. There performance is very good, probably not that much above a quality table top like a Drake or JRC. They generally have about ZERO features in terms of memory, band scan, etc.

An even bigger problem is service. They were largely designed to be repaired by replacing major assemblies until they worked. (Like a computer.) I suspect that even the factory declined to repair the modules. This means you might have to take a chance buying a module you only think is bad. Plus such a part might not be readily available.

A couple of examples from first hand experience:

RA6790/GM: No memories. (Does have a computer I/F) No notch filter. No noise blanker. LCD displays die with age. (2 each at $100). Standard 6.8KHz filter is really more like 9KHz, too wide for serious DX. I have a second radio with frequency synth problem that defies repair, and, yes, I am competent and own lab grade test equipment. Oh yes, a service manual might cost another $100.

Cubic R-3030: High phase noise in synthesizer makes signals down in the noise very hard to copy. Front panel key pad is poorly debounce, and almost unusuable. They all do this! Clearly they were used under computer control.

So, my advise, buy a brand-new radio with a warrantee and accessable tech support. Or, buy and old quality tube type rcvr,like a Hammarlund SP-600, or even an R-390A. These can be trouble shot to the component level by standard TV repair techniques. A hobbyist can deal with these things.

My two cents,
Al

I don't like the way it is, and hope it changes soon. Tired of
listening to old men talking about their health problems on HF.

HF needs new blood and dropping/reducing CW requirements will do it.

Nyet. "Water" is "voda".

"Vodka" is the diminutive of "voda" - in effect, "little water".

Back in the "good ole days" when hams didn't have digital displays and
frequency counters. And they were doing good to hit the "band", let alone
a precice frequency within the band the term "TOP BAND" refered to 160
meters. Why? Because 160 was the TOP of the amateur allocations. With
10 meters being the lowest. In otherwords, based on BAND not FREQUENCY.

Might I suggest, considering all the silly comments in this thread, that
most of you folks should pick up a copy of 200 meters and down, and read
about amateur radio history and traditions. This should be required reading
of all amateur licensees.

Trivia question...what does the term 160, 80, 40, etc meters refere to?
Answer...length of the wave. See why 160 is top band, but lowest in freq.?

> job is to clean up afterward.

The swat team and all of the other law enforcement officers did everything that could be done at the time. Most if not all of the killing was done in the first few minutes. There were two officers on the scene within minutes and they did engage the shooters in a gun battle but were out gunned as they only had pistols and the shooter had a high a rifle. They were pinned down and could not get in.

By the time other officers and swat teams arrived the shooters had gone deeper into the building and authorities did not know what was going on. They did not know if they had a hostage situation or not. In fact it looks like the first encounter with the two officers might have triggered the shooters to kill themselves because the first results from the autopsies show that the two might have died up to 3 hours before police got to them.

If the police had rushed in and any innocent students had got hit or killed those complaining about the swat teams non-action would have been complaining about them being cold blooded murders.

At least two of the officers at the scene had children in the school.

>a mic in it. In fact, it has NEVER seen anything but a straight key.
>Period. In the entire time I've owned it since 1981. (I even have
>a mobile chopper for it.)

If you'd ever known Morse code, you'd still know Morse code. I didn't
know they had HF privledges for the Tech ticket in 1981. What bands
were you operating on back then ? Doin' a little bootleggin' are we ?

>One of these days I'll get that fire back
>to operate CW again. But I'll do it because I WANT to, not because
>I have to.

Where have I heard that line before ? "I can do Morse code. I just
don't do it because somebody says I have to do it". Uh huh, sure ...

Well, beat yourself to death over not wanting to do it. Be my guest.

73, Jim KH2D

We haven't established that, Cecil. Some claim CW is outdated; many others contend that it is not. Finding that CW is outdated is a necessary first requirement for declaring the rule outdated. So far, there's been a lot of noise, flames, and debate, but no conclusions. The fact is, CW is still in use daily, even with newer, more efficient modes available.

Michael.

Oh, excuuuuse me, you are a 10m phone dynamo I guess. Also I guess you
can go over to your general class buddies, and they let you talk on
their's.

>
> By the way, you're not in my logs from Nebraska, ROK, Guam, Somalia, or
> Illinois. Are you sure that -you- have any HF experience?
I'm on the radio most every night . Where are you? Being as I'm usually
on a band you can't work, except for CW, which you don't like to work,
it's not unusual that I would
not run into you.

No, the id'er overrode the audio. Do you think these people will ID
with a device that can't be heard? MK

I'll post it in standard fenetics just so you'll get it:

November Zero India Mike Delta.

> And I know for a fact he is fairly inexperienced on HF.

Then you are mistaken. I shed the Novice license in 88. You would be correct
if you had said that twelve years ago I was fairly inexperienced on HF.

> But being a tech plus or whatever he is ,

Yes, I hold a Tech "Plus" license. It says N0IMD on it.

> thats to be expected.

By the way, you're not in my logs from Nebraska, ROK, Guam, Somalia, or
Illinois. Are you sure that -you- have any HF experience?

The example I posted
> about was no stretch of the imagination. The OO that sent that notice
> was close to the ham he sent it to, if I understand correctly. He should
> have expected that from a very strong signal.

Could you be more specific? Perhaps the power density diminishes with the
square of the distance?

> I've never had an OO report

Right.

> but I know quite a few over the years that have gotten them. 70%
> should have never been sent of the ones I know about.

Exactly 70% or is it really closer to 65%? Please show your work, or is this
just anecdotal heresay.

Some of these were
> downright silly. For a person to be a OO and send notices about, he
> should be very carefull, and use proper test gear in cases where it's

To tell the truth I did not report the individual. BTW he was a White Anglo-Saxon Protestent (not that it really matters). I didn't need to report him because he wound up in the stockade for other crimes against others. I won't go into the details here. I think the Sargent,who got the 45 away from him in my case, did testify against him in other cases, and he did take this incident into consideration.

The subject that we are discussing here is now being hashed over on many TV programs. I admit that although there are some people who would tend to agree with me...the majority seem to think that they can feel safer if they own guns. I think that it is a sad situation and obviously it may take a lot more senseless murders and gun "accidents" before people will really do anything to increase gun control. I also admit that the people who have lost loved ones are not in favor of more gun control...instead they tend to blame violent movies, TV and games as well as school teachers...but never themselves or their false security blankets...GUNS: the killing tools.

Again I respect your opinions on this issue and I know that if a poll was taken - more Americans, at this point in time, would agree with you than would agree with me.

I may at times put my foot in my mouth BUT at least I won't shoot myself in the foot because I own no guns.

73,
Bob Wex w2ilp (Inhibit Loaded Pistols - In the hands of - Loaded People)

Maxim felt guilty about inventing the gun silencer. With a gun silencer you could murder someone without disturbing the peace in your neighborhood. So Maxim volunteered to promote Ham Radio to atone for the gun silencer. He acheived the perfect neutralizer. Hams can disturb their neighbors without murdering anybody!

Boy, and just today I heard that some kids in New Jersey were gonna bomb a
school from info for making bombs. And they were getting they're info OFF THE
INTERNET!!!

My point is this :

Is activity on 27.555 gonna endager a life?? I'd rather bust someone for
plotting to bomb a school and kill innocent lives, like in Littleton, CO and
now in Alberta Canada, Than to whine to the FCC about some guy's freeband
webpage! I really think we should leave the Freebanders alone and let them
have their frequencies. There are more important things in this World.

We should give the Freebanders to No-coders like myself.....

This point should make you think!!!!!

How about it Joe??

Hello LLoyd:

"Freebanders" if they stay below 28Mhz are no danger to our service, But they
are expanding well into the 10 meter band. Like any other intruders, They
should be taped, RDF'ed and turned over to the FCC for action.

Assuming you mean "extended receive/transmit" mods...yes:

1. Remove three back screws, and open the unit.

2. Snip the loop of wire. It'll be quite obvious which one - it's the ONLY one.

That's an argument for dropping all enforcement, and traffic patrol,
etc., because you'll *always* have something that's worse that those
man-hours should be devoted to instead.

At the Federal level, we have the FBI, and BATF, to deal with bombers. When it comes to hoodlums and thugs on radio, we have the FCC. I think that our government is big enough to deal with both criminal elements.

Now for the soapbox speech:

The no-code test group reminds me of a person who admires great art, and the Masters of the past. He really wants to be an artist, but he has no talent, and doesn't want to study painting in order to develope what talent he has.

So he goes out and buys a paint-by-number kit of the Mona Lisa. And he fills in those numbered boxes real well. But he can't understand why, when its finished, people don't hail HIM as an artist!

That's how I see the no-code testing group. They want to be HAMS, and to have the pride of accomplishment in electronics for themselves that they themselves always assigned to hams. But they don't want to be held to the same standard as those old timers who did the work, and earned the respect .

So they get their "Test-by-number" exam, where the exact questions and answers are printed in a book, and they get a no code test license, and then they wonder why it feels hollow to have a ham license! Well, fellows, it feels hollow because you gutted it out, and it is hollow.

I have an Icom IC706 (the original one) and, when cold, it will not transmit a PL tone. I can't therefore access local repeaters on 2m that require a tone. When the radio gets warmed up (room temperature) the PL works. Anyone have any experience with this problem or a suggested fix? Please email me.

From: Woodsman <woodsman@apexmail.com>
Message-ID: <7gcph6$58j@newsops.execpc.com>
Source record: 144326

Anyone aware of a good site on the web for detailed mobile
install info? I am thinking of getting two 2M or dual band
rigs and having it set up for easy swapping in/out of the cars
also so I could use one in the house. Would wire directly to
the battery with both leads fused and thinking of getting a device
to kill power after the ignition is off for 10min or so-any
recommendations there?? Wire would then go thru firewall to
some sort of in vehicle power panel. Not sure what to use or
what type of connectors to install here either. Any opininions
on install or what radio to get while not spending an arm and a leg
welcome. I don't need anything fancy, just basic repeater ops
with tone encode/decode and scan. On the other hand extended
receive would be nice. And maybe the ability to run the mobile
as a repeater for my HT. Yikes, there goes the "simple" and here
comes the $$$$. Oh well, all input welcome.

2504. RF capacitor question ?

Newsgroup: rec.radio.amateur.misc
Date: 1999-04-30 00:00:00 UTC
From: kengkengkeng@my-dejanews.com
Message-ID: <7gctu8$847$1@nnrp1.dejanews.com>
Source record: 144327

Could anyone explain me about this ?
I've design & build a C-class 50MHz/60Watts RF amplifier.It's works quite well and stable as I design it from transistor data sheet.But a variable capacitor (mica - compression type,2-70pF) in the final stage turns very hot.Is this common operation of RF amplifier ? Or I've to replace it with a new type of capacitor to get better performance?

Please advise . Thank you.

I really want to get the QST CD-ROMs, but mine is a Mac-only household and workplace, so I have my doubts. I have in the past been able to view Windoze based CDs on my Macs, using VirtualPC or Acrobat Reader, or one of a number of other viewers.

What level of success have other Mac users had with reading the QST CD-ROMs? The ads say the custom viewer supplied with the discs is called "QST View." Will this run on VirtualPC 2.x or 98? Please let me know the details of your solution(s), including system, machine, any emulators or viewers/readers/other SW you use. Thanks much.

That would certainly be sufficient but I didn't say CW is outdated.
There is simply no reason for the Morse code requirement to continue
to exist. If it wouldn't be adopted new today, there is no good reason
to keep it. Finding that CW is outdated is NOT a necessary first
requirement for declaring the rule outdated. Morse code is simply
not as important as everything else in ham radio combined anymore.

Hello All
I have a heathkit SB 104. The rig needs some work. It needs finals (one could use the motarola MRF 455A Its alot cheaper then the heath original final) 10 ohm bias transistor and the control IC for the last digit in the display. Cosmeticly its in good shape. I'm asking 100 bucs for the rig plus shipping. I'm keeping the power supply for my packet operation and I have sold the VFO all I have left is the rig. BTW the receiver in this rig is HOT! If you are interested drop me a email oris@dirtball.com

Well, in the old days, hams used wavelength instead of frequency
to describe their bands. When you list the bands in wavelength order
from largest to smallest, 160m is on top.

I am as sentimental about the mode as anyone, but morse is emphatically not a language, anymore than AMTOR or ASCII. The distinction is linguistic, but really commonsensical as well. A language must have a grammar and meaningful inflection (the swing of a bug is accent, but it doesn't convey meaning, as the rising pitch of spoken language at the end of a question) as well as syntax and lexicon. CW has a vocabulary (sort of) and some idiom/colloquial syntax, but no grammar, and it really just transposes whatever the written language of the communicators is into sound pulses. Finally, a language must be self-sustaining and complete, and morse/CW is not. It depends on its users having and using a real language, English, Spanish, Navajo, whatever, to encode and decode. No communication is possible using CW alone (hard to find two people who know CW and no language). Again, I ain't dissing CW, I love it, enough to keep it in its pure, lofty place.

>necessary first requirement for declaring the rule outdated. So far,

that is not the case. your logic is in error. To attack the
curent of Code testing it is merely needed to deteremine that Code is
not vital. given the ARRL survey and the admissions of ProCoders that
one May forget the Code after the tests and still be good hams, is
proof that it is not vital, therefore it is unfair and unreasonable
for it the the Vital Go NoGo status it has currently. Now a code test
of some sort the reduces the import of pasing or fialing to the
results of say not knowing anything about SSB would a legal and valid
tetst but that does not stisfy the ProCoders. It would statisfy the
NoCodersby and large as a final resolution

>there's been a lot of noise, flames, and debate, but no conclusions. The
>fact is, CW is still in use daily, even with newer, more efficient modes
>available.

The use or non use of Morse Code is not an issue in wether all
hams must demstrate a certain level of mastery. Something that is not
required for the mode in even MORE common use than Code, like SSB or
FM. It is not required that understand one thing about these modes in
order to use them or use other modes

If you want to use your mobile 2 meter as a cross repeater than you need a dual bander since you will use 44 from the HT and the mobile will transmit out on two meters.

Even if you stick with just a single two meter rig - the modern ones have automatic shut offs already built in. Some operate on two hours and some on three hours.

You have the right ideas about swaping between cars and use of same-type-connectors for power and to fuse direct to battery. There is nothing more to it than that. You can use vehicle power cord connectors and splice them into the power line of the rig and thus you unplug it and plug it into the next vehicle. I believe there are also quick release slide-type racks you can put on the rig and on the vehicle like I used to use for a CB unit. Look in QST, AES and HRO.

> who are not extremely technically qualified or not made of money.

> Al Klase - N3FRQ

I will have to agree with Al's well reasoned posting. I have owned some of the exotic equipment. I now have a very good, but very common, Drake R8B. There are several problems with the exotics. The first is that they were never intended for general use and, thus, often have terrible ergonomics or sound quality. These are acceptable traits in monitoring equipment which is intended to always be computer controlled, but maddening characteristics for the general listener. Secondly, if the exotic was primarily designed for use by a governmental agency, the cost of commonly replaced parts can be absurd. This is often not a result of government purchasing excesses, but rather an inevitable product of limited production and low economies of scale; but the result for the consumer is the same ($100.00 plus LCD screens). The third, and worst, problem with the exotics is that they are sold in very limited numbers, often for a short time period. This means that few people are familiar with them or can service them, parts are not generally available, and a spare parts chassis will never be found. After some years, it will become difficult, and then impossible, to keep it working.

If you want one for the bragging rights, fine. Or, perhaps, you might want one as part of a collection where its design, if not its use, would be important. However, you had better be a fully qualified technician to service it; and you must realize that the performance advantage the exotic has is probably in a range or function that you will never use, and the guy down the street with the Japan Radio Corp. set or the Drake is actually getting better actual results in the type of listening you are actually doing.

For what it's worth.

My understanding is that both W5YI and ARRL are going to switch to essay tests for the Morse exam. So, for example, a question might be "Discuss KC0EGB's use of pathos in the classical Greek tradition, especially as portrayed in the works of Euripides, and cite reasons why you think his use of Q-signals suggests he is a biblical scholar." or "Based on KC0EGB's description of his rig, draw a detailed schematic of it, incorporating any updates installed by the manufacturer and any modifications made by the owner. Critique the design and suggest improvements."

Just kidding. ;-)

I dont agree with all the rules but I do follow them.Why? Because they
ARE THE RULES!!!

The whining is not about following the rules, it's about changing the
rules!!! Most of the complainers about doing away with Morse Code for
licensing seem to be older hams, and old people have problems with
change whether it be the ARS or some other endeavor. That's why when you
visit nursing homes, the furniture, table settings, etc. are not changed
very often, change disturbs these poor folks' equilibrium.

Perhaps we should change the name of this hobby to the Amateur Radio
Skilled Nursing Service. :-0.

Joe, if you don't feel any rules need changing, keep in mind that is only your opinion, not some commandment handed down from above.

Is the thinking of you older hams (not age, years in hobby) so insular that there can NEVER be a change in the rules?

I'm Roberto IK2RND , I have realized a replacement board for EX-314 MEMORY BOARD installed in these Icom rigs :
IC-745 IC-751 IC-751/A ICR-71A/E IC-271 IC-471 IC-1271.
My board called EPROM/RAMBOARD definitely solve the problem related to the lithium battery fails. When battery fails the rig stop to work and you need to send your radio to the Icom service center to replace battery and reprogram the board.
Data in the my board are stored in an EPROM chip the RAM is used only to store the 32 memory channels.

I would like to know how CW maintains this "level of operator
competentancy"? While "we" are debating CW, the Internet, cable modems,
sat. phones, cell phones are passing us in technology.

Mike (KD4LLA)

For the people who like peace and quiet: a phoneless cord <grin>!

The longer Bill Clinton stays in office, the more we pay.

Our justice system pays because he has opened the door for millions of us to play games with the notion of telling "the whole truth" under oath. Our military personnel pay because they have to carry out their duties while grappling with questions regarding the motives of their commander in chief. Our national intellect pays because, with his myriad verbal contortions and willful deceptions, the president has become little more than a walking, talking insult to our intelligence. Finally, the taxpayers pay because, in his efforts to keep "looking presidential" and "doing the work of the people," he is creating more new programs and growing the government.

Haven't we paid enough already?

See my web page at http://www.alaska.net/~mdickman/Index.htm

Excellent advice I think.

Relating my own experience, I bought an Eddystone EC958 in 1984 for 300 ukp,
a lot of money at the time. Built in the late 60's/early 70's and described
as a professional grade receiver for general communications use it has very
high stability (long term less than 20Hz) so ideal for rtty etc.

Although in very good condition, I decided to order a new speaker and
'front panel' (not the main panel, just the thin plate with all the legends on)
and a service manual. A bargain I thought at 36 ukp.

The receiver has facility for an internal FSK module (ideal for my rtty) an
an internal crystal calibrator. The prices qouted for these were 209 ukp
and 89 ukp respectively. In other words, as much as I had paid for the whole set.
Obviously, I decided I could manage without them !

Fortunately (up to now!) the set has been very reliable, but given that
it was about 15 years old when I bought it, I think I've been lucky.
The only plus side may be that this set will hold its value better than a
'new' set of comparable purchase price.

Given a choice today, with a budget of 1000 ukp, I would probably buy a
modern 'amateur' receiver (Icom/Kenwood/JRC etc) as opposed to a professional
set (Racal/WJ etc) because I feel the features are more in-line with what we
wish to use the set for and servicing, if needed, would be cheaper.

But whatever you buy - happy listening

Barry

ON ham?

I guess with that sparkling persona of yours, you have folks climbing all over each other to be the first to help you in obtaining your license and getting set up to go on the air. It's just a guess but I don't figure you'll be joining the ranks any time soon. Too bad since you seem like such a charming fellow.

Regarding the following - Thank you Mr. Hollingsworth for taking legal action against the eyesore of Amateur Radio, WB2OTK...

EASLEY, SC: The FCC has sent tape recordings to General licensee Richard L. Whiten, WB2OTK, made of his on-the-air operations on November 22 and 26, 1998. The FCC's Riley Hollingsworth has requested Whiten to "provide a full explanation of these transmissions" by May 20. Hollingsworth said the information would be used to determine "what action to take regarding the renewal of your Amateur Radio license." The FCC said Whiten could keep the tapes. Commission personnel inspected Whiten's station in January and has requested information on the operation of his station and a high-power linear amplifier the FCC noted upon inspection.

Hey, Reg--If you choose well it only takes one.

That is the folly of so much concern surrounding "numbers of guns" owned by any one individual...he can only use one at at time anyway.
If he chooses well, for self defense that's all he'll need.

Do you really believe that there are no guns on the street in England? Pray tell, what was that device which was used a couple of days ago to murder the young lady, the popular TV news anchor, on her doorstep in London?

I hope you don't really believe that it isn't possible to smuggle guns into your country-or that it won't be, or isn't being done. In an even moderately free country, guns and drugs are everywhere they are desired, useful, needed or even wanted. People have been known to build them themselves on occasion-both guns and drugs. Methamphetamine cooking is almost a cottage industry nowdays, and the guns sometimes used to guard the cooks are certainly illegal for them to possess, since that they are engaged in a criminal enterprise. Think they are deterred by that fact?

It truly is a shame that passing a law to make it so does NOT make it so - only for the people who will always obey all laws. The criminals couldn't care less, as they have no regard for laws anyway.

Of one thing you can be fairly certain--probably the only armed people in England are the criminals and the police. So anyone who is not a crook is advised to stick close to your local Bobby. If you can find him.

73 and good luck, Dick W0EX

As the owner of a pair of RACAL RA6790/GM receivers, I've enjoyed reading everyone's excellent advice. With some clever shopping, you should be able to pick up a pair of working 6790's for less than the price of a used Drake R8B (certainly less than a new R8B!). There are so many of them, I don't think the world will ever be void of replacement parts. I would bet that there will be 30 or more 6790's for sale at the Dayton Hamvention in two weeks. It's really not hard to learn to swap modules, especially with the BITE doing some of the detective work for you. You'll need a service manual.

Now, for a totally different, totally right-brained view: I simply enjoy operating professional receivers more than amateur or consumer receivers. I previosly had a pair of 6790's and sold them, only to lose interest in listening. My amateur HF rig, with it's excellent general coverage receiver, just collects dust. I chose the RACAL's mainly because the market is flooded with them and their price reflects that fact. I'd love to try a Harris, Cubic, W-J, R&S, etc. On the other hand, if you can afford the W-J HF1000, is there really a question here?

-Ken

I too do not see the point of the original post. Having installed my own tower (89' crank up) I would not begrudge another Ham for hiring out the job. I might do so for my next tower given the amount of work involved to do the installation properly.

2561. Pioneering EE Patents: Negative Feedback Amplification

Newsgroup: rec.radio.amateur.misc
Date: 1999-05-01 00:00:00 UTC
From: Ed Suominen <ed@eepatents.com>
Message-ID: <372BE0E6.9C927E20@eepatents.com>
Source record: 144096
Cross-posted to:
sci.physics.electromag,sci.nonlinear,alt.radio.amateur.club.taparc,rec.radio.amateur.misc,rec.radio.shortwave,alt.cellular.nokia

Pioneering EE Patent, featured May 1-14
"Wave Translation System"
Issued 1937 to Bell Labs for the negative feedback amplifier
and filter. Get a free abridged copy of this historic patent
(or just view a summary) at http://eepatents.com/feature?m05d01/

Any electrical engineer who has ever designed an amplifier or
active filter around an op-amp has made use of the fundamental
principle of negative ("degenerative") feedback. Harold Black
taught this principle in exhaustive detail in his 1937 patent,
taking 35 drawing sheets and 52 pages to tell the story. The
patent discusses complex effects of feedback on impedance, gain,
stability, and "wave shaping" (filtering). A PDF file containing
the full patent would take up about 7 MB, so only
highlights are provided.

Upcoming features will include the original patents for the
Costas loop and the word processor. For the last half of April,
the featured patent was "Three-Electrode Circuit Element
Utilizing Semiconductive Materials" issued 1950, for
the point-contact transistor. It's archived at
http://eepatents.com/feature?m04d30/

Some of us were also there in Dayton when this so called "ASSAULT" was supposed to have taken place. Sorry, It never happened as described. Yes, there was a shouting match, but there was no "ASSAULT". WB2OTK claimed he "threw K9MX across the room". Mr dreamer again !! The real problem with this WB2OTK/W9XN fairy tale is that it did not happen in 1993. Get your story straight, it happened in 1991. Many of us would like to see the so-called video tape of that "ASSAULT". The camera was aimed at the floor during the whole shouting match. Just another OTK Fantasy!!!!!

Please, if he was advocating his services for safety reasons that's OK, but
his main message is want a professional non-ham ham antenna, call me.

More "great ops" who need elephant guns because they're too impatient to wait
their turn. It's like watching an arms race...

There is currently legislation where friends and family can call and rat out old folks that shouldn't hold a drivers license due to lost vision, hearing, motor skills, etc. The State takes the anonymous tip and retests the suspects.

Maybe we could get that kind of rule going in the amateur service so we don't have to wait for the actuarial tables plus 10 years for changes.

It is pretty obvious. The Native Americans [Indians] did not have guns. It was the Europeans who later brought fire arms, fire water, horses and some contageous diseases to the Americas. BUT I must admit that if the colonists in the original thirteen colonies didn't have guns, we might all be living in southern Canada and have better medical insurance. I never met a Ham I didn't like, Think if you have it, Bob Wex w2ilp [Indians Lacked Pistols]

It looks like WB2OTK is still telling lies. It is no surprise that he would tell a twisted version of story that was witnessed by other amateurs.

If he had operated his station according to part 97 rules he would not be in the shameful state he is now. (Lost a vanity call, on the hot seat to explain bigoted raceist remarks, explain OO cards. etc). It will take him a long time to explain his years of being a radio bully, qrmer, and other nasty habits it seems he can not control.

This radio rat has been put on the shelf by one Mr Riley Hollingsworth. Hooray for Riley!! The frequencies left vacant of rule breakers like WB2OTK and his like m inded crew are wonderful to operate now that the people in authority have acted.

Lets keep the amateur bands a place where children can listen to , enjoy, and work to get their ticket.

Mark, I don't know these people or their abilities, don't know why they would want a repeater-like IDer on their microphone, don't know why they would make receipt of an OO report public (or at least tell you), and don't know why they aren't on Jerry Springer with this shocking information.

I really is phrased as KN. Although you are correct YE would be the same
dots and dashes. It is a very subtle difference. practice it thinking of
both ways, and you will hear the diff. There is a very small space there.
Let me know what yo think.

2578. Hollingsworth checks into 3950 Liberty Net !!

Newsgroup: rec.radio.amateur.misc
Date: 1999-05-02 00:00:00 UTC
From: Radio Monitoring Svcs <kevincart@hotmail.com>
Message-ID: <01be9449$fb1a97a0$LocalHost@68458f823c000>
Source record: 144101
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.shortwave

FLASH! FLASH! FLASH! FLASH!

Ham radio history appears to be in the process of being made
again, even as this Bureau Chief is typing this report...

At approx. 9:08PM Central Time, on the evening of 01 May 1999
R. Hollingsworth W4ZDH, checked in (LIVE) to the Saturday Evening
National Liberty Net on 3.950 Mhz LSB. Prior to the 10:00 (EST) Net startup
time, a rather well-know station from Evansville, Ind appeared to be transmitting
a broadcast directed at no particular station for 2 hours. Comments made by the
Evansville station included many references to call signs commonly heard
on the 3950 Net, alleging linkage of 3950 with various domestic political
groups and other organizations which had no cognizant bearing of logical
reference whatsoever. A broadcast of apparently somewhat disconnected facts
at times very irrational in an apparent vain attempt to tie up the frequency from
general amateur use. (it is alleged that the Evansville station has a record of
prior mandatory committments to State-operated mental health facilities)

In a suprise move, Hollingsworth checked into the net, and made inquiries
to the Net Control as to who the Evansville station was speaking to. It appears
that the FCC was listening in for the whole duration prior, and documenting
the same! When Evansville heard this, an apparent telephone call (??) was made
to another well known station in South Bend Ind, who also has a history of
jamming legal and proper discussion nets on 3.950 Mhz. The station in South
Bend came up on the frequency, announced his call, then went into a rather
un-gentlemanly tirade, berating both the Liberty Net, and the FCC, in rather
improper language which contained numerous references to sexual functions
and bodily organs, then taunted on the air for the Authorities to go after
him for utterances of the same...

As this is being typed, various noises and tapes are being played atop the
3.950 Liberty Net in an apparent ongoing "Jamming-Fest".

Let us HOPE that this evening sees the last chapter written of the jamming of 3.950 Mhz
for the good all SWL's, such as your reporter, and Ham op's.
Shut these interfering stations down and confiscate all their transmitting apparatus.
Then, and ONLY then will SANITY be restored to the Hamradio bands.

Hi Reg...No, there were no wildly incorrect conclusions, just recognition of more of the strange sort of attitudes that seem to feel like we all should just capitulate to the outlaw element. Reminds one of Mr. Chamberlain in the late 30's. It's not completely foreign to this side of the pond, either. And since I haven't "shot" yet, and don't plan to, "it" can't be typical of me.

Strangely the same "leaders" who believe that we who try to follow the law should all turn in our firearms, have no compunction whatever about bombing in the Balkans. They actually thought that a little "threat" would cow the bad guys, and they could pull it off with a macho show. Same sort of thinking as when they seem to think that passing a law against owning guns will move the crooks to hand them in. Yeah. Right.

:
: Any electrical engineer who has ever designed an amplifier or
: active filter around an op-amp has made use of the fundamental
: principle of negative ("degenerative") feedback. Harold Black
: taught this principle in exhaustive detail in his 1937 patent,
: taking 35 drawing sheets and 52 pages to tell the story. The
: patent discusses complex effects of feedback on impedance, gain,
: stability, and "wave shaping" (filtering). A PDF file containing
: the full patent would take up about 7 MB, so only
: highlights are provided.

Man, this is a classic that well deserves a 7 MB pdf file!

I once spent an entire weekend at the Firestone Library in
Princeton digesting this monumental piece of work (both the
published paper and the patent itself).

I realize that you're providing a monumental service by posting
material of this calibre, but please, please, please don't
abridge anything like this in the future. Storage is cheap,
but primary information sources have a value beyond that of
conventional money!

Still, thanks.

Harry C.

p.s. Consider the (unforgetable what's_his_name's) paper and patent
on the operational amplifier. (I am tempted to give the
op amp credit to George Philbrick, who did more than
anyone in the of promoting knowledge and acceptance of
this new technology, but if memory serves me correctly, he
wasn't the concept's originator.)

p.p.s. Does anyone participating in this international forum
know the current status of George Philbrick? Is he still
living, and where? Boston Area? For that matter, does
anyone now reading his newsgroup even remember his K2X?

Why do I feel like I'm living in the 'Twilight Zone'
where nothing beyond 5 or 10 years past ever existed?
Guys, I hate to break the news to you, but there was
interesting things going on here on Earth even before
Pentium, the '486, or for that matter the World Wide
Web. Yep, boys and girls, it is a fact, and all of
this came to you as a benefit of us 'Old Farts'.

>Nonsense.

You say that because you never got your code speed up, Gary. You still hear individual letters being sent. Get your speed up and you'll hear words; you won't have to go through the translation process. For example, when I was first learning Vietnamese, to understand the phrase: "Toi di nha " my mind would have to translate word by word: toi = I, di = go, nha = home. Later, after immersion in the language, no such translation was necessary. I could understand a sentence, not having to consider each individual word.

Don't give up, Gary.

Jeff KH6O

P.S. R.r.a.equipment dropped from any fol-ups; why didn't you do that?

I can remember parsing dits and dahs, which truly gives meaning to mind
numbing work. 5 wpm is slow enough to allow this. Those who didn't
progress much farther are still at that stage. It's not a wonder that
they don't understand that CW really is usable to communicate.

Michael.

Having been in RF both professionally and recreationally for more than a couple decades, I honestly feel that if you purchase say an AOR 7030+, JRC 545, or Drake R8B, the only way to tell a significant difference between their performance and for instance the WJ, would be with $30,000 worth of test equipment. You'll never hear it in practice.

If you REALLY want the best possible performance, get one of the above "consumer" radios and invest the difference in cost in an antenna "farm". MUCH bigger bang for the buck and you'll have performance second to none.

PS- when I was in the military, many places had high end ham equipment as backup to the expensive stuff because it was so reliable and easy to fix with standard troubleshooting procedures. (and worked as well or better than the rack mounted gear)

pls send any reply to mbeutler@powerweb.net (am on someone else's computer)

need someone with a mid to late 70's callbook to lookup WR4AMS and
WR4ANR. One was a local repeater call. Can't remember which.

thanks in advance.

I doubt this is the last chapter. I personally believe that the only way these
people will go away is for them to die off, one by one. Of course, others will
spring up to take their places...

The only moron is YOU, mr "mf_luder"! Showing our intolerance are we? It takes good engineering, is quite a challenge, and a personal accomplishment to put up nice BIG antennas! You sound like someone who has't a clue about personal challenge or satisfaction.

Now, onward to design and put up a 4 element 75 meter beam. That 3 element job was a bit too small.....

Chuck...K1KW

BTW mr mf luder...have you the "guts" to give us your call if you have one?

What great news it is too bad that Sid the Lid and the Minister
of Propaganda did not make an appearance then Mr. Hollingsworth
could have had a more representitive sample.

Thank you Mr. Hollingsworth for your efforts perhaps some day
I will be able to let the Preacher listen in to my shack in
the evening.

2600. ALA Big Ride Communicators

Newsgroup: rec.radio.amateur.misc
Date: 1999-05-02 00:00:00 UTC
From: ke7a@my-dejanews.com
Message-ID: <7gi059$4aj$1@nnrp1.dejanews.com>
Source record: 144123

The American Lung Association's Big Ride Across America has a need for 8 Ham Radio Operators to volunteer as communicators . The ride leaves Seattle, Washington on June 14, 1999 and concludes 3500 miles later in Washington, D. C. on July 31, 1999. Over 200 bicyclists are expected to participate. Detailed information about the ride can be found on the web at http://www.bigride.com

The volunteer ham communicators will ride in sweep vehicles, be stationed at the midday rest stop and in the base camps. Volunteer positions are available for two, four and six weeks. The two week segments are, Seattle to Missoula, Montana, Missoula to Rapid City, S.D., Rapid City to Madison, Wisconsin, Madison to Washington, D.C. Mobile equipment will be provided.

Having supported the ride last year, I can tell you it is an experience to last a lifetime. If you are someone you know is interested in information about volunteering please send an email. Non ham radio volunteer crew members are also needed, so this could be a great summer vacation for you and your spouse. Cycling experience not required.

2605. THD7 program-

Newsgroup: rec.radio.amateur.misc
Date: 1999-05-02 00:00:00 UTC
From: Walter Dunckel <wdunckel@best.com>
Message-ID: <372C9ED8.AB90A12B@best.com>
Source record: 144178
Body handling: Binary attachment payload not displayed: wdunckel.vcf

I have posted a program as well as it's source code
(in Visual Basic v. 5.0) at the following website:

http://www.best.com/~wdunckel/d7zpinfo.htm

It includes the following functions:

1. Spectrum Analyzer "slow scan" - This scans any 4 Mhz
spectrum selected and graphs any activity with a signal
strength reading of 1 or above. Band needs to be in VFO
mode. Results are displayed on a chart/graph.
2. Dual signal strength indicators (one for each band) work
simultaneously
3. Frequency control with up/down and step, as well as a/b band
and dual band selection and VFO/Mem selection.
4. A two line history of the communication so you can see what
commands are being sent to the radio while you use the program.
5. Push to talk and VFO scan can be selected with the mouse,
and the program should work on either comm port 1,2,3 or 4.
6. There is an area to enter unique commands manually using
the commands that were reverse engineered by Darryl Smith.

This program, again, is far from perfected, but appears to operate with
reasonable success on two of my machines. By the way, I have not
started to implement any APRS functions or settings in this program yet.

You don't have to see, you have to hear in order to know it is a form of communication hence, language. Even signing with hands to the deaf is a language. Sign Language, most sign language does not involve letters but it is considered a language is it not. There is a book written by Peter Carron, W3DKV titled, MORSE CODE: The Essential Language.

jeffreyh@Hawaii.Edu (Jeffrey Herman) writes:

>You say that because you never got your code speed up, Gary. You still
>hear individual letters being sent. Get your speed up and you'll hear
>words; you won't have to go through the translation process.

But that isn't what makes a distinct language!

When I read written English, I read whole words - not individual
letters. That doesn't make written English a different language
than spoken English. Nor is English transmitted by Morse code anything
other than English.

Now, on the other hand, French *is* a different language. Different
vocabulary, entirely different grammar. Two people can communicate
in French using spoken words, written words, or even Morse code - and
it's still French. It's also still French if you're a beginner and
have to figure out individual letters or syllables, or if you're fluent
and recognize whole phrases without thinking about it.

Becoming fluent in Morse code may feel like becoming fluent in another
language. That just means that learning Morse and learning a second
language are similar tasks for the brain - it doesn't mean that Morse
actually *is* a different language.

Dave

Nonsese, you're just not approaching the code properly and with enough
determination. If you ever sang a song (not necessarily in tune) you CAN
learn the code.

My dad went up to Montreal to enlist in 1939. The Canadian Army put all its
volunteers through aptitude tests to determine what their specialized
training would be. My father, who was an amateur pianist and a drummer
from the West Indies were the only two chosen from a large group of
soldiers to be trained as PROFESSIONAL telegraphers. My point is that
you must have a sense of rythm to learn Morse. My other point is that few
if any people have neveer sung a song or listened to some kind of music.
Everyone has some rhythmic sense. Here's an example of what I mean:

All sorts of people have learned enough Morse code to pass code tests;
it's only a matter of method, practice and patience. As I recall, once you
had a receiver, it was only a matter of memorizing the code patterns from a
printed chart and spending twenty minutes per night, four nights a week
listening to W1AW's code practice sessions at 5 and 7.5 words per minute,
to learn enough code to pass a code test before an FCC examiner (this was
the 1950s).

Today, there are freeware/shareware programs with settable code speeds
starting as slow as you'd like them to. The only thing standing between
anyone who can read English, Braille or whatever, and reading code at
5 words per minute is determination and an investment of time. You may
resent having to learn code, but if you want to learn the code, you'll learn
the code. Any body (in less politically correct times we used to say
"Any body's little sister") can learn the code. It just ain't that hard.

Here is the subset of INTERNATIONAL MORSE CODE that were
commonly used in ham radio, when I learned them in the early 1950s.
Please keep in mind that _ and . are only convenient abbreviations.

- always should be thought of as dah

. should be thought of as di, except at the end of a character

. should be thought of as dit, at the end of a character

For example: A = didah N = dahdit B = dahdididit

A . _ N _ .

B _ . . . O _ _ _

C _ . _ . P . _ _ .

D _ . . Q _ _ . _

E . R . _ .

F . . _ . S . . .

G _ _ . T _

H . . . . U . . _

I . . V . . . _

J . _ _ _ W . _ _

K _ . _ X _ . . _

L . _ . . Y _ . _ _

M _ _ Z - - . .

1 . _ _ _ _ 6 _ . . . .

2 . . _ _ _ 7 _ _ . . .

3 . . . _ _ 8 _ _ _ . .

4 . . . . _ 9 _ _ _ _ .

5 . . . . . 0 _ _ _ _ _

Note: <decimal point> is sent as the letter R

<period> . _ . _ . _

<comma> _ _ . . _ _

<hyphen> _ . . . _

<wait> . _ . . .

<error> . . . . . .

? . . _ _ . .

/ _ . . _ .

<end of transmission> . _ . _ .

++

Keep in mind that a dah is three times as long as a dit.

The time between successive elements (i.e. dits or dahs) of the
same character is equal to one dit's time. As I remember it (this
one you'd better check), the time between two successive characters
equal to three dits' time.

It'll go easier study if the characters are memorized in mnemonic
groups, according to their sounds.

All dits all dahs
======== ========

E . T _
I . . M _ _
S . . . O _ _ _ (oh)
H . . . .
5 . . . . . 0 _ _ _ _ _ (zero

<error> . . . . . .

Opposites
============================

A . _ N _ .
W . _ _ G _ _ .
J . _ _ _ (no opposite)
1 . _ _ _ _ 9 _ _ _ _ .

U . . _ D _ . .
2 . . _ _ _ 8 _ _ _ . .

V . . . _ B _ . . .
3 . . . _ _ 7 _ _ . . .

4 . . . . _ 6 _ . . . .

R . _ . K _ . _
P . _ _ . X _ . . _

/ _ . . _ . (no opposite)

._._. EOT (no opposite)

L . _ . . F . . _ .

E . T _
I . . M _ _
S . . . O _ _ _ (oh)
H . . . . (no opposite)
5 . . . . . 0 _ _ _ _ _ (zero)

<error> . . . . . (no opposite)

<period> . _ . _ . _ (no opposite)

? . . _ _ . . , _ _ . . _ _ (comma)

close but not quite the same
==========

C _ . _ . Y _ . _ _

Q _ _ . _ Z _ _ . .

<wait> . _ . . . <end of transmission> . _ . _ .

Here's an example of what I mean about rythm:
Q, which stands for Queen, sounds like the Wedding March,
"Here Comes the Bride" Dah Dah Di Dah

No.You license plates are merely another # to your state auto
licensing bureau.They are 'good' until their expiration date.

On Sun, 2 May 1999 02:11:32 -0500, "BD" <bodu@pobox.com> wrote:

SB DX @ WW $OPDX.407
Ohio/Penn DX Bulletin No. 407

The Ohio/Penn DX PacketCluster
DX Bulletin No. 407
BID: $OPDX.407
May 3, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AC4G, AA5DX, N6HR, N6RT, N8BJQ, KE9KD & DX-Central, DJ5AV & DX News Letter, DL4BQE, DL3APO, DL7VRO, G4BUE & DX News Sheet, G0REP, GU0SUP, JA1WSX, JI3DST, LU3FCK, VK8PW, Lukasz Komsta and Herb Blair for the following DX information.

3W, VIETNAM. 3W7TK was heard this past weekend on 17 meters (18069 kHz) between 1600 and 1900z. QSL via OK1HWB.

9N, NEPAL. The "DX News Letter" reports that Sergio, IZ6BRN/AP2WAP, is going to sign 9N7RN from Mirni near Pakhara. His activity should have started by the time you read this. He intends to stay until the end of June 1999. QSL via IK4ZGY. Meanwhile, the "DX News Sheet" states to look for Fred, WF6Z, to be active until May 7th as 9N7ZA. The QTH he will be operating from is at 24,000 feet. Activity will be SSB on 7234, 14158 and 14175 kHz. QSL via home call.

CY9, ST PAUL ISLAND. From a press release: Look for Doug/K4LT, Dan/K8RF, and Bob/W6RGG, Stan/AC8W and Hank/K8DD to be active May 23-31th as CY9RF. The CY9RF team will also be a Multi-Op/Multi Transmitter entry in the CQ WPX CW Contest May 30-31st. Look for them to have four 24 hour station and two part-time stations. Before the contest they will run 2 or 3 stations concentrating mostly on the WARC bands and on difficult propagation areas of the world such as Asia, VK, ZL etc. Also, all SSB operations will be before the contest period. This operation is now a YASME DXpedition and QSOs count for the YASME awards (for details check the Web site: http://www.cestro.com/myweb/yasme.html
QSL via K8RF. All OPDX InterNet Subscribers will receive the complete press release as an additional bulletin.

DAYTON HAMVENTION DX ACTIVITIES. Steve, N8BJQ, informs us that the following events will take place:
The DX Dinner Banquet program on May 14th will be "ZL9CI, 96,000 QSOS, and Environmentally Correct" by ZL2HU & ZL1CN. (There are still some

tickets left.)

The DX Forum programs are on Saturday, May 15th, at Meadowdale High School again (1:00 - 5:00 PM). Guest speakers are as follows:
"DXCC 2000" by Wayne Mills, N7NG
"AR Cluster Development" by Jim Moore, WU3V
"ZL9CI" by Ken Holdom, ZL2HU, Murray Woodfield, ZL1CN and Don Greenbaum, N1DG
"The DXpedition to St. Brandon, 3B7RF", story and slides will be presented by George Wagner, K5KG, Karl Gratezer, HB9JAI, Walter Marshall, W7SE and Erik, HB9ADP
"Return to Vietnam after 30 years" by 3W6WE/K2WE & 3W6LK/W2LK
"3B9R" by Frank Smith, AH0W and Garry Shapiro, NI6T
"Another day in Paradise, V7-Kwajalien Atoll" by Tom Harrell, N4XP

FT5W, CROZET ISLAND (Update). Good news. Reports indicate that Gil, FT5WH (F5NOD), has reportedly fixed his radio and should be active again soon. Look for him on 20 meters.

FS, ST. MARTIN (and V4, St. Kitts & Nevis). Hiroo, JA1WSX, informs OPDX that he will be going to FS and V4 after the Dayton HamVention. He will sign FS/KH0Y from St. Martin, May 16-19th. After this operation he will go to St. Kitts and will try to get a V4 license from the Telecommunication Office there. He will be there May 19-21th. QSL to JA1WSX direct or JARL.

IOTA NEWS.....
AS-032. Takeshi, JI3DST, will operate from Osumi Archipelago as JI3DST/6 from November 21-22nd. Activity will be on 17/15/12/10 meters SSB. QSL via JI3DST.

AS-041. Operators JE4CIL and JI3DST will be active from Oki Archipelago (Oki-Gun Shimane) as homecall/4 from 0800z June 4th through 2200z June 6th. Activity will be on 80-10 meters (including the WARC bands) CW/SSB. QSL JE4CIL/4 to P.O. Box 3, Hamamura, Ketaka-Cho, Ketaka-Gun, Tottori 689-0331 Japan. QSL JI3DST/4 to Takeshi Funaki, 2-18-26 Hannan-Cho Abeno-Ku, Osaka-City Osaka 545-0021 Japan.

AS-117. Takeshi, JI3DST, will be active from Honshu's Coastal Island (Awajishima Hyogo) as JI3DST/3 between July and December. His schedule is as follows: July 24-26th (IOTA Contest); September 4-6th; September 23-26th; October 30th-November 1st and December 11-13th (10M Contest). Activity will be 17/15/12/10 meters SSB. QSL via JI3DST.

NA-169. A group of hams from the ICARC, WWDXC and NCCC will activate Waadah Island (NA-169) of the Makah Nation Tribal Lands during the IOTA contest July 24-25th. NA-169 is one of the rarest of the IOTA groups since these islands are the Makah Nation ancestral burial grounds. Two kw stations will be on the air before, during and after the IOTA contest to hand out QSOs.

This effort has already been coordinated with the IOTA HQ
Martin, G3ZAY. More to follow.

J28BS NOW QRT. Phil, J28BS/F5PHW, is now QRT and is in Muscat at A45XR's home. He reports that his J28BS DXpedition netted 5700 QSO IN 57 hours of activity. If you hear J28BS on the air now, it is a pirate. QSL via F6KPQ, Bureau or CBA.

LO1, ARGENTINA. LU4FM reports that he will be active as LO1F in the ARI International DX Contest as Multi-Op Single Transmitter entry.

MM, SHETLAND ISLANDS. Wolf/DL4BQE, Helmut/DL5BUT, Thomas/DM4VDE and Arno/DL1CW will go on an Amateur Radio Expedition to the Shetland Islands (DXCC: Scotland). They will be active with two 400 watts stations from June 11-16th. They will operate from Muckle Roe Island (IOTA EU-012, WAB HU 36). The team will use CEPT callsigns (MM/DL4BQE/p and MM/DM4VDE/p). The first station will run on CW, while the second station will run either on SSB or CW. They will be active on 160-10 meters bands including the WARC bands with verticals and wire antennas. The goal is to make as many QSOs as possible, especially with stations outside of Europe. At the moment, Wolf is trying to find a comfortable RTTY software, and they hope to be able to satisfy some RTTY requests, too. QSL cards are prefered via DARC-bureau. If you cannot wait, you may send your cards direct to DL4BQE. For some further information, check out the Web site at:
http://privat.schlund.de/y/y36/shetl.htm.

QSL INFO AND NEWS.....
Tony, G0REP, reports that he processed and despatched all QSLs sent to him directly following his recent operation from Mustique Island (NA-025). Anyone having requested a QSL by this means and fails to receive a card after a reasonable period of time, should contact him via his E-mail address were he will try to sort things out. His E-mail address is: Tony_Blackburn@otterburn2.freeserve.co.uk

LOGS ON THE WEB. Doug, N6RT, informs OPDX that the following logs are now available at the Web Site: http://dx.qsl.net/logs
FO0XUU (Marquesas - February 1999) 5R8FU (through April 6, 1999)
FO0XUU (Australs - January 1999) VK9YY (February 1999)
JW/SM7NAS (April 1999) VK9XX (February 1999)
YC0LOW (through April 25,1999)
5B4/EW1AR & 5B4/NP3D (October 1998)
Peter, DL3APO, states to look for the logs from the FO0AWI operation to be added a little later because Wulf wrote all his Qs on a paperlog.

GU2ENK is an INVALID callsign! Phil Cooper, GU0SUP, GU and MU series QSL Sub-Manager informs OPDX that the callsign GU2ENK appears to have been active in the ARI contest (CW section) in 1997 and 1998. He has made inquiries, and this callsign has NEVER been issued! Please take note, as you will NOT get a QSL card.

QSL Manager, Fritz, DL7VRO, reports that he has had some computer problems but was able to save the data on his hard drive. Anyone who

still needs a QSL from the operations that Fritz is manager of and wants to know the status of their cards, please send an E-mail to: dl7vro@ibm.net

SPECIAL EVENT SPECIAL. From May 1st through July 31st, special event station SN0APT will be active from Lublin and Klementowice. The event is the 750th anniversary of the first opening of a pharmacy in Poland. The "APT" suffix is the abbreviation of the Polish word "Apteka" which means "pharmacy". The first Polish pharmacy was opened in Swidnica in 1248. The special event is organized by radio club "Ariadna" (SP8YCB). For any questions about this station, please send E-mail to: radioam@ariadna.pl QSL via the bureau or direct to: SP8YCB Club, Po Box 403, 20950 Lublin, Poland.

SPECIAL PREFIXES. Just a quick reminder to look for special prefixes being used by Scottish and Welsh amateurs to celebrate the opening of their new parliments. Activity will begin May 6th and last until July 31st. GM stations (Scotland) will use 2A, 2S and 2T. GW stations (Wales) will use 2C, 2W and 2X.

USI NEWS. The Michigan DX Association (MDXA) will be putting "Beaver Island" on the air September 10-17th. Beaver Island is USI MI032L and they will be using a 8 man team with the special callsign KC8MHX (Michigan Ham Xpedition). The team will use the standard IOTA frequencies as well as other frequencies. QSL via W8VOM at: MDXA-BEAVER, O-947 Lake Michigan DR, Grand Rapids, MI 49544.

V4, ST. KITTS AND NEVIS. The "DX News Sheet" reports that Steve, G4JVG, will be active June 4-18th while on holiday. His callsign will be allocated upon his arrival. Activity will be SSB on 40-10 meters including the WARC bands and possibly 80 meters with 400 watts and verticals. QSL via home callsign.

V7, MARSHALL ISLANDS (possibly KH1, KH9 and maybe others). Bruce, AC4G (ex-N4GAK), informs OPDX that he will be active for at least 2 years from Kwajalein Island beginning in mid-June, hopefully. Bruce expects to be active on all bands unless it interferes with his work assignment. He will be taking his Kenwood TS-850, a vertical Cushcraft R-7000, his satellite rigs and antennas for AO10 Satellite QSOs, etc. Bruce states that he hopes to be active from his residence as well as from the club station on Kwaj. Many of you may remember Bruce as QSL Manager for Ken Wells, V73C. Bruce hopes to pick up where Ken left off and be active in many contests. He is applying for the callsign of V73G. Bruce will continue to answer Ken's QSLs as well as his own unless it becomes a problem. Ifso, he may ask for a volunteer to help with the QSLing. Bruce adds that he also hopes to be active from Baker-Howland, Wake, and a few other islands nearby. Lastly, Bruce hopes to give out many QSOs on SSB and CW. If you need a certain band QSO, let him know and he will try to accomodate. He will not be taking RTTY gear in the hopes that the club station has this setup already.

VK8, AUSTRALIA (Rare Area). Peter, will be operating as VK8PW/p starting around May 14th from Arnhem Land, an Aboriginal Land Trust, in the VK8 district some 350km east of Darwin. This area is accessible by special permit only from the Aboriginal land owners. This might be the first ever ham operation from this part of VK8. Peter will be there until mid October, 1999. Operations will be on 20-10 meters on SSB only. QSLs for bureau requests go only to VE8RZ and for direct requests to: Peter Wollenberg, Box 2142, Darwin, NT, 0801, Australia.

VQ9, CHAGOS ISLAND. Ron, VQ9DX (AA5DX), reports from Diego Garcia that he is now dockside and can ride his bike into the radio club at least 3 or 4 times a week depending on his work load. Ron states to look for him on 1828 kHz starting around 2315z through 0130z (that is when he must QRT to get back to the ship on time). He states that their offical sunrise is now 0112z.

XZ, MYANMAR (New IOTA DXpedition). A few different sources report that Mike/N7MB, Steve/G3VMW, Ray/G3NOM, Darryl/AF7O, Warren/K7WX, Jouko/OH1RX, Robin/WA6CDR, Dan/NA7DB, Sally/KM5EP (YL op), Paul/W8AEF, Martti/OH2BH, Rich/K7ZV and EA5XX; N5IA and K6KRE of the Central Arizona DX Association (CADXA) will be active in mid January of the year 2000 for two or three full weekends as XZ0A. Operations will take place from Thahtay Kyun Island (also known as Mergui Archipelago, 9 57' N, 98 32' E) located in the Andaman Sea. This will be the first IOTA operation from XZ-land, which means it will be a new IOTA. Planned operations will be CW/SSB/RTTY and SSTV on 160-6 meters. More details are to follow.

ZC4, UK SOV. BASE AREA ON CYPRUS. The "DX News Sheet" reports that Jeff, G0WSA, is active until the year 2001 or 2002 as ZC4JP while stationed at the Western Sovereign Base Area (WSBA) in Episkopi. No QSNs have been reported as of yet, but activity will be on CW/SSB/RTTY and Pactor three to four afternoons weekly. Jeff will use a TS-850S 100 watts and dipole. QSL via RSGB bureau to G0WSA.
Meanwhile, George, 5B4AGC (G3LNS), was active as ZC4ATC over the past weekend on 40/30/20 meters between 2100 and 0400z. Check 14170, 10109 and 7052 kHz. QSL via 5B4YX.

2617. Re: 'radio' license-plates, and call-sign change...?

Newsgroup: rec.radio.amateur.misc
Date: 1999-05-02 00:00:00 UTC
From: Mark Waldron <bogart@nationwide.net>
Message-ID: <372CD9D2.7AAA0BE6@nationwide.net>
Source record: 144190

Well, call the DPS. They can answer to this.

I have operator tags here in TX. If my call sign changes,
I would apply for new operator tags then, wait for them
to arrive at the tax office, then go pick them up when they
arrive. If you are nervous about this, keep a copy of your
paperwork in your vehicle and show it to any officer or trooper
that seems to need more evidence other than your word if any question
arises.

Source record: 144192

In article <7gcph6$58j@newsops.execpc.com>, "Woodsman"
<woodsman@apexmail.com> wrote:

Both Ford and Chrysler have flyers that give their recommendations for
mobile radio installations. If you go to the Dayton Hamvention, you can
pick up copies there. Both of these guys have booths each year. If Dayton
isn't on your agenda for this year, you can try contacting Ford and
Chrysler directly.

Ford's Flyer was titled "Ford Motor Company Mobile Radio Installation
Guidelines."

Chryslers flyer was titled "Chrysler Corporation Radio Communication
Equipment Installation Recommandations."

Chrysler did give a contact address:
Electrical/Electronic Systems Compatiblity Department
CIMS 481-47-20
Chrysler Corporation
800 Chrysler Drive East
Auburn Hills, MI 48326-2757

Ford didn't provide any contact information on their Mobile Radio
Installation Guidelines handout, but recommended that you post a message to
"rec.radio.amateur.misc" as a source of additional information. Oh, Well.

Years ago I used to install radios for a two-way shop. If you do change
your mind and decide to spend $75-$125 per radio, you can have an excellent
job done by a local two-way radio shop. I recently had my mobile radios
installed by a shop and they thought of things I never would have. They
fabricated a custom control head mounting bracket and did one heck of a
job. It took the shop a day and a half to put the radios in. It would
probably would have taken me two to three times that long.

Good luck.

One nice suprise is that the PK-232 is going back into production with a DSP
front end.

You can check them out at Timewave's booth 111.

Not always true. I knew morse code, and don't remember any of it now
since I never used it after learning it. The same is true for many Hams
I know.

Just about 97% of them.

> You may consider learning the code a waste of time (yours) BUT, if it
> is required to obtain the license you still need it, like it or not.

Obviously. No one here made an argument about code not being a
requirement. If you were paying attention, people here are suggesting
that it not be made a requirement any longer.

> You may never parallel park a car in your lifetime (in 35 years of driving
> I never have), soooo, should it be eliminated from the driving test?

No, that would similar to horizontal and vertical polarization of
antennas on the Ham exam. But there should not be a test of how to
attach skis to the roof of your car, if you want to have a correct
analogy.

> Most of your frivilous analogies fail to hold any water.

Because you don't understand what is being said, and translate the
analogies incorrectly.

Blacks loved that answer back in the slave days, Women loved that answer back in the days when they were not allowed to vote, Hams loved that answer back in the 90's when code was a requirement to use HF.

When they pass a law that says you have to jump off a cliff, I suppose
you will go along with that too.

A legal speed limit is only a meaningless number pulled out of a hat by
some polititian. When they can't get enough people to speed over that
number, they continue to lower that limit until they can generate the
wanted revenue. Police cars always HIDE out of site to catch speeders
because if they were visable, people would not speed past them and they
could not fine them. This is not a matter of saftey, or the police
would not hide, but be visable so that people would see them and not
speed. Can't make much money that way on tickets.

No, why stop there, why not find 600 more skills that you never intend to use and learn them. People take the time to learn what they NEED to know or WANT to know. Why learn Russian if you never intend to go to Russia or ever speak Russian?

You don't understand. Perhaps he wants to be a Ham that can talk on HF
frequencies and never use Morse Code. There are a lot of us like that
that are licensed hams now.

If someone doesn't want to use packet, but wants to just use Morse Code,
does that mean THAT person really doesn't want to be a ham too?

Boy, that's not the half of it. Doping the silicon wafers within
tolerance was a bitch. No tubes in this baby! And I keep thinking to
myself one day, I'll buy that laser to trim the resistors. As it is, I
have to make several passes with the emery board to get the right
values. (What hard drive?) And no fair buying pre-clad PCB's!

Dear Sirs.....

I'm but a lowely 'lil CBer, and thank the good LORD for that. I have
been an avid SSB operator on your 'ole band for 23 years and have heard
just as bad if not worse on my band. The reason that I've never joined
your ranks are too numerous to go into here. But my gist on the situa-
tion at hand are: there are three knobs on any radio that will silence
people LIKE W2OTK>WB2OTK; VFO, simply change freq.; RF gain, simply cut
his signal strength down to the level to which he has sunk; AF gain,
simply turn his voice level down to the level of the pesky gnat...., Oh,
and one switch, OFF. To play these people's games are to bring your self
down to thier level. And while I may be a lowely CBer, I'm not a fool.
I also went to a link that was on one of the responses and saw a picture
of this ham and read where he likes to tote a piece to hamfest and else-
where. Well, he who lives by the sword dies by the sword. Some black man
will see that nice shiny S&W and take it off him when he puts him down
with his TEC-9. And that will be the end of all our problems with this
individual. But there will be someone else with an axe to grind to take
his place. 73s

Now, now....nothing more refreshing than a good, broad, factless
generalization.....

I think a more appropriate analogy would be like a student who wants
to read, write, and program computers to put up a fight against mandatory
Braille. He just has no desire (that's D.E.S.I.R.E. as in want, not 'lack
of intellect') to learn Braille or use Braille. Braille might be useful at times,

perhaps, but not for someone that would rather not communicate that way.
Does this mean he has a contempt for Braille? No, just a disinterest. Let
people communicate in Braille all they want to. Let them do it wearing nothing
but jockstraps. The point is HE doesn't choose to spend his energy on it since
he would like his energy spent reading or writing or programming.

So, how's your braille competency? Oh.. I see...you say you don't know
any braille....hmmmm....gosh you must be one of them thar fruity brainless
liberals, huh?

Have Kenwood's famous R-5000 in near new condition. Been babied for years.
Has both the AM filters and narrow SSB filter. Was originally configured for
AM
shortwave listening. Works like new and looks like new. Great HAM or SWL
receiver.
One of Kenwood's best receivers! Have manual too!!!!
Asking $700.00. They typically sell for $850 plus in this new condition with
opt. filters.

Good post Mark. That's exactly one of the problems. The FCC suddenly
allowed MDs to make a judgement call on this with no guidelines. And
couple that with the fact that some experts claim that significant
portions
of the population has SOME degree of dyslexia. In most people it's as
simple as transposing two numbers. I never considered myself as
dyslexic, but I had one MD tell me I was because I constantly type 'teh'

instead of 'the'. So at what point does something that isn't even a minor
inconvienence become a disability? Not to knowledge, but when
applied to a program that 'test skill levels'?

It all comes back to CW, is it important or not? If it is, then it shouldn't
be waivered. Period. If it isn't, then what's the point of the test? At the
current time, the FCC has decided that 5wpm is important. And I strongly
suspect that very soon that will change. Whether it changes before
that 5wpm becomes the new defining point for all HAM privlidges is
the question.

That's interesting, Lyle, and certainly meets the ITU/IARU treaty
requirements. What does the FCC say about it?

I *am* using a homebuilt computer, and believe me, it's easier to
build a computer than a radio. The only challange is getting the
individual components to work together as a single system, fussing
about with all the settings and making everything compatable.

Hi Tedd
The transistor is supposedly an mgf1302, you can get them
from downeast microwave. A simple mod that will help with
thw transistor life and it also brings the noise figure way
down (2 s units of noise the old way, no s meter change
preamp on or off now and it hears MUCH better) is to add a
200 ohm trimpot in the drain lead and adjust for about 3
volts bias instead of 5 volts which is what is there in
stock form. There is a resistor in the drain lead circuit
that can be lifted to add the trimpot (do NOT install it
directly at the drain lead, unpleasant things could result).
I have done this to both my 6 and 2 meter bricks with very
good results.

2657. Riley Hollingsworth & 3.950

Newsgroup: rec.radio.amateur.misc
Date: 1999-05-03 00:00:00 UTC
From: radiosigs@aol.com
Message-ID: <19990503140648.24975.00001656@ng-fq1.aol.com>
Source record: 144039

Gentlemen..gentlemen.. you're all in a tither over Riley's sitting on 3.950. In fact, you're mistaking it for approval. Allow me to explain since the run-of-the-mill 3.950 adherent isn't capable of tying his own shoelaces.The man's a patriotic American, not a bottom- feeding subversive as you are. He was there to assure that freedom of speech is part of amateur radio even if he had to barf listening to you fruitcakes. Also he made sure that you too, who under the guise of patriotism would silence all Hitlerite talk,were allowed to jump around in your shiny black jackboots,starched brown shirts and wave your Hakenkreuz Fahnen. Yes, in this wondeful land of ours, even Nazism and other sordid maniacal political expressions are allowed to be seen and heard. I don't know the man personally but I believe I can testify to the fact that he TOLERATES but doesn't like you,so my suggestion is to get off your high horses and face facts. You 3.950ers are abominations..pariahs to both ham radio specifically and to America in general. And let me toss in guttersnipes also...for good measure. The good thing about 3.950 is that it keeps kooks in one place instead of allowing you to run around defacing temples and cemetaries, hanging AfroAmericans and all the rest for which you turkeys are noted. Question:how can you look yourselves in the face knowing how disgusting you are?

> --
> 73, Cecil, W6RCA http://www.bigfoot.com/~w6rca

There has probably been a more detailed clarification from the FCC, but the only thing I can find in the Part 97 rules is a statement that:

"The administering VEs must accommodate an examinee whose physical disabilities require a special examination procedure. The administering VEs may require a physician's certification indicating the nature of the disability before determining which, if any, special procedures must be used."

It's interesting that the VEs *must* accommodate those with disabilities, and *may* require a physician's certification.

Here are some relevant paragraphs from the ARRL VE manual regarding Morse testing:

"Pausing the examination message, where warranted, may be a successful accommodative procedure to overcome candidates' ability to write or respond quickly. The pauses may be included after each sentence or phrase, after each word or even after each character, to allow the examinee the time to write, absorb and/or interpret what was sent. The decision as to the level of pausing warranted is determined by the VE team in conjunction with input from the candidate or the candidate's Doctor's Statement. The level of accommodation should be the least necessary to overcome the candidate's handicap."

In a later paragraph: "For a character-by-character examination, a grade of 70% or more correct characters can be considered passing".

Unfortunately, then comes the kicker, in Mark's case: "If the candidate doesn't have a readily identifiable handicap/disability or if the candidate doesn't provide a Doctor's Statement describing the handicap/disability he/she suffers from, you are not to offer the more

flexible accommodations in administering the Morse code examination."

In many situations, that puts the VE team between a rock and a hard place, because the VEs are generally not qualified to assess "hidden" disabilities like dyslexia, stroke after-effects, etc. In the case of the Handi-Ham camps, the staff and instructors (including at least one MD) who have been working with the students all week can advise the VE team as to the level of accommodation that might be needed. It's a lot tougher at a VE session where people simply walk in off the street.

If this were for anything other than the 5wpm basic test, I think this
would
be grounds for throwning out the whole test. I mean, you could claim 25
WPM here by pausing 15 seconds between each character.

But since someone with a handicap waiver only has to take the 5wpm
test anyway, and the 5wpm test, in my mind, is nothing but
memorization and a 'mental look up', it's not really that much different
than from what a non-handicapped ham would take. But still not the
same. Just not that different.

I'm kind of touchy with handicapped declarations. I had a family member
who was handicapped. And he REFUSED to get handicapped plates
for his car because he said 'it doesn't mean anything anyway'. He had
polio back in the 50s. He could have legally gotten an exemption to
hunt
from his car. As it was, he 'violated' the law in that he didn't
usually move
the required distance from his vehicle, instead he threw a mat over his
hood and lay on it. When he got a deer and help wasn't arround, he'd
put a noose on it's neck and drag it.

Very few things piss me off more than some '*' parking in an handicap
zone without a sticker, or like the guy in the Z-28 (with standard
shift)

in my hometown who I've seen swing into the handicapped spot at the market, throw a placard on the dash, and then hop out in his sweats and running gear and jog into the store.

Anyway, a handicap declaration should mean something. As it is, it's BS and in my mind was used strictly as a wedge to keep the no-code issue under control for a short while longer.

Your first attempt wasn't even close. The second is recognizable as a
spelling error. The first try was not simple letter transposition; it
was butchery.

The next thing we're gonna hear from those 3.950 subversives is that Riley Hollingsworth,because of his sitting in to monitor things,is part and parcel of all that rot spewed forth by a bunch of America -haters. Anyone believing that Riley is not a patriotic American is as nuts as the ultra-ultra wind-up toy baboons scratching their own armpits. Get with the program, boys......Riley TOLERATES you...nothing more...nothing else!
